To my friends at TARC.??

Thank you so much for the
$1000 donation.? It was very timely and we hope it will encourage
other clubs to do the same.

Thanks again.???

N5OOH is sporting a NEW self supporting crank up tower / deer stand. Nested at around 22 feet, Ray has a work platform to service the soon to be installed Mosley PRO67 Beam antenna.

Congratulations on the new addition to the North West Hills Skyline, home to N5TFK, KD5ABQ, N5LKP, AD5RN (when home from college) and NU5D, and of course N5OOH and Sylvia KD5USI.

Go sick’em Ray (maybe this is a Birthday Present???) and best wishes from TARC,

Steve NU5D

Hello,

The Tri County Amateur Radio Club is holding their annual Hamfest/Swapmeet this Saturday from 7:00 AM until Noon. This is our first year to be in our new facilities, an old warehouse that is serving as a Community Center. The address is 404 West main Street in Azle. Talk-in is on 147.16 + 600 KHz and 110.9 CTCSS.

Head this way and give us a call!

Paul

2791. Temple Christmas Parade

Yahoo group: Temple_ARC
Date: 2006-11-09 02:47:50 UTC
From: Myron Mesecke
Topic: 297 Message: 2791

For all those who have patiently been waited for information on TARC's role in the parade I now have some information. The coordinator of the parade left to go out of town for the weekend last Friday at noon. When I tried to call him on Monday I found out he was again out of town for a conference. He returned this afternoon and I talked to him by telephone.

TARC has been asked to work the afternoon of the parade making sure that all the parade entrants get lined up properly. This is something TARC has done at both the Christmas parade and the Fourth of July parade. We have also been asked if we might be able to help at the end of the parade route making sure the parade entrants get back to where they need to be. We have been asked to perform these duties because of our organizational and coordination skills. We may also have a role during the parade or along the parade route. Details are still being worked out.

There is a parade meeting tomorrow, Thursday the 9th at noon at the Frank Mayborn center. I plan on attending to get more information.

CERT will also be working the parade. Again, I will be getting more details on this. The parade coordinator welcomes all groups who wish to help the community enjoy the Christmas season. The holidays are certainly the right time to come together in friendship and cooperation.

I am sorry that there was confusion last week concerning TARC and the parade.

2794. When new FCC rules take effect.....

Yahoo group: Temple_ARC
Date: 2006-11-10 18:57:32 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 2794 Message: 2794
Attachments: 1 described; binary payloads are missing from this source WARC

ARRL has the following message today on their website. They don't know when the new rules will be published in the Federal Register, so the effective date that Sky Command will be legal cannot yet be determined. I read somewhere it usually takes 3-4 weeks for new rules to get published, so hopefully the 30 day clock should start ticking soon.

From http://www.arrl.org/?artid=6946

Reminder: FCC "omnibus" rule changes not yet in effect (Nov 10, 2006) -- The new Amateur Radio rules detailed in the recent "omnibus" FCC Report and Order (R&O), WT Docket 04-140, adopted October 4 and released October 10, are not yet in effect. The changes will become effective 30 days after they appear in the Federal Register, the official daily publication for rules, proposed rules and notices of federal agencies and organizations. Since publication has not yet occurred, the effective date of the Part 97 rule changes cannot be determined. The ARRL will announce the effective date of these new rules as soon as it's known. The "omnibus" R&O does not include action on the Commission's proposal to eliminate the Morse code requirement for all license classes. A Report and Order in that proceeding, WT Docket 05-235, is still pending, and the ARRL will announce when the Commission releases it.

2796. 444.500 MHz UHF Repeater - New Tone 123.0

Yahoo group: Temple_ARC
Date: 2006-11-11 00:45:07 UTC
From: Anthony Mikulastik
Topic: 2796 Message: 2796

The 444.500 MHz UHF Repeater at the VA Hospital was programmed for 123.0 Hz tone today. During the renewal process I advised the Texas VHF FM Society I would be changing the access tone to 123.0 Hz after November 1, 2006. The 123.0 tone should make it easier to remember the tone and it should decode faster as it is a higher frequency.

* Texas club makes generous Spectrum Defense Fund donation: The Temple Amateur Radio Club (TARC) <http://www.tarc.org/> in Texas has donated $1000 to the 2007 ARRL Spectrum Defense Fund <https://www.arrl.org/forms/fdefense/>. "TARC is pleased to donate a little something back to the hobby that we all enjoy," TARC's President-Elect Tom Olsen, KC5KXS, and President Myron Mesecke, N5TFK, said in a note to ARRL Chief Development Officer Mary Hobart, K1MMH. "The ARRL Spectrum Defense Fund needs our support, and we hope this check helps, if just a little. Thanks for all you do!" TARC's twice-yearly Belton HamEXPO, billed as the "friendliest hamfest in the country," draws thousands of hams come from all over Texas and the surrounding states to buy, sell and socialize. The ARRL Spectrum Defense Fund wants to raise $250,000 by year's end, and the ARRL's federal court appeal of the FCC's 2004 and 2006 broadband over power line (BPL) rule decisions will be a prime beneficiary. Donations will enable the court appeal to go forward without shifting resources away from other important ARRL programs.

2806. Parade info

Yahoo group: Temple_ARC
Date: 2006-11-11 22:57:38 UTC
From: Myron Mesecke
Topic: 2806 Message: 2806

Attended the Temple Christmas parade meeting on Thursday. TARC is being asked to provide our talents to make it a success. Two tasks are definite and more are being worked on. The parade needs TARC volunteers starting at 2:00 P.M. on Monday afternoon December 4th to man each block were parade entrants will be staging. The staging area has been changed from last year. The areas are now to the north of Adams avenue. Eighth street from Adams to French. Entrants will line up in the two outside lanes facing south. Dignitaries and Military personnel will stage on Sixth street from Adams to Barton again facing south. Side streets will be utilized for some of the entrants. TARC has also been asked to provide a volunteer to ride on the shuttle vehicles. TARC has also been asked if we could provide some workers at the destaging area which is the Temple High School parking lot. Perhaps we will get enough volunteers so that the same ones who start at 2 P.M. do not have to work the destaging area after the parade unless they just want to.

Anyone who is willing to work the parade should send me an email so I can get a count of how many we will have. I think we will need about 8 people at the staging area (that way each person is responsible for only one block) and a couple of people to ride the shuttles. A dozen or more volunteers would be great.

2807. Request for Killeen Christmas parade help

Yahoo group: Temple_ARC
Date: 2006-11-11 23:02:10 UTC
From: Myron Mesecke
Topic: 2807 Message: 2807

(Below is an email I received asking for help with the Killeen parade.)

Myron,

I am the chairman of the Celebrate Killeen Committee. Our Christmas parade is December 9th at 4:30 pm. I do not know when Temple's parade takes place, could be the same day.

Please let me know if there is a conflict. If there is not a conflict, we could use some help also. We need 6 to 8 folks to help man the entrances to the parade line-up. We have cops at these entrances, but they are not really trained on who to let in and who not to let in. With your ability to communicate via handy talkies, you would be of great assistance.

Please let me know if you and your guys would be interested. The parade is the 9th and starts at 4:30, the line-up starts at 3 p.m. and most of the work would be done around 6 p.m. or so.

Benton Goodnight KE5DMW

(Below is my reply)

Benton,

I will get the word out about the Killeen parade. At this time I cannot make any promises in regards to participation. There are several TARC members that live toward Killeen and other points west of Temple so some of them might be willing to help out.

The Temple parade is Monday December 4th. TARC also has its annual Christmas dinner Thursday December 7th. It might be hard to get people to commit to three events in one week but we will see what happens.

Let's hope for no rain during the parades with the temperature just cold enough to make it feel like Christmas and not too cold to be miserable.

Myron

Sorry that I did not have a sign up sheet for the Christmas dinner available at the last club meeting. The dinner will be at the Wildflower country club in Temple. Time is 7 P.M. on December 7th. The price will be the same as in years past. Five dollars with TARC picking up the rest of the tab.

So far I have word from five people that they will be attending. I know that many more are just waiting word from me on how to sign up. Either send me an email or call me on the phone. If you want to you can wait till the dinner to pay.

I will also get word out on the Monday night net about the dinner.

2810. Usenet question

Yahoo group: Temple_ARC
Date: 2006-11-11 23:38:33 UTC
From: Myron Mesecke
Topic: 2810 Message: 2810

This is not a ham radio question and I hope I don't offend anyone by posting this here. VVM recently dropped usenet from their service. I don't know how many people here still use newsgroups. There are several newsgroups I still participated in including some support groups such as one for people who have Crohn's disease like I do. There are also several ham radio newsgroups. Usenet was the beginning of the internet. While it may not be flashy like websites it is a good way to get information traded between people. On the Crohn's newsgroup we discuss symptoms, diet, medicine, treatment and support each other when our guts are getting the best of us. People also post links to medical articles there. All of this is done quickly and easily on usenet. None of us have any need or desire to share pictures of our digestive tracts or have to scroll through needless features on a website. Google groups was suggested to me by VVM but Google groups has none of the features that a news reader has such as sorting, killfiles, mark as read, showing all replies to a thread,etc. I could go with a newsgroup only provider but I hate having to go with two different providers when one used to do the job.
I would like to know from everyone here what ISP you are using and if your ISP still provides newsgroup server access. You may email me directly if you wish.

Subject: TARC Parade info

Attended the Temple Christmas parade meeting on Thursday. TARC is being asked to provide our talents to make it a success. Two tasks are definite and more are being worked on. The parade needs TARC volunteers starting at 2:00 P.M. on Monday afternoon December 4th to man each block were parade entrants will be staging. The staging area has been changed from last year. The areas are now to the north of Adams avenue. Eighth street from Adams to French. Entrants will line up in the two outside lanes facing south. Dignitaries and Military personnel will stage on Sixth street from Adams to Barton again facing south. Side streets will be utilized for some of the entrants. TARC has also been asked to provide a volunteer to ride on the shuttle vehicles. TARC has also been asked if we could provide some workers at the destaging area which is the Temple High School parking lot. Perhaps we will get enough volunteers so that the same ones who start at 2 P.M. do not have to work the destaging area after the parade unless they just want to.

Anyone who is willing to work the parade should send me an email so I can get a count of how many we will have. I think we will need about 8 people at the staging area (that way each person is responsible for only one block) and a couple of people to ride the shuttles. A dozen or more volunteers would be great.

Subject: TARC Request for Killeen Christmas parade help

(Below is an email I received asking for help with the Killeen parade.)

Myron,

I am the chairman of the Celebrate Killeen Committee. Our Christmas
parade is December 9th at 4:30 pm. I do not know when Temple's parade
takes place, could be the same day.

Please let me know if there is a conflict. If there is not a
conflict, we could use some help also. We need 6 to 8 folks to help
man the entrances to the parade line-up. We have cops at these
entrances, but they are not really trained on who to let in and who
not to let in. With your ability to communicate via handy talkies,
you would be of great assistance.

Please let me know if you and your guys would be interested. The
parade is the 9th and starts at 4:30, the line-up starts at 3 p.m. and
most of the work would be done around 6 p.m. or so.

Benton Goodnight KE5DMW

(Below is my reply)

Benton,

I will get the word out about the Killeen parade. At this time I cannot
make any promises in regards to participation. There are several
TARC members that live toward Killeen and other points west of Temple
so some of them might be willing to help out.

The Temple parade is Monday December 4th. TARC also has its annual
Christmas dinner Thursday December 7th. It might be hard to get
people to commit to three events in one week but we will see what happens.

Let's hope for no rain during the parades with the temperature just cold
enough to make it feel like Christmas and not too cold to be miserable.

Myron
N5TFK

If there is anyone willing to work the Killeen Christmas parade either contact me or Benton. BGOODNIGHT@hot. rr.com

Sorry that I did not have a sign up sheet for the Christmas dinner available at the last club meeting. The dinner will be at the Wildflower country club in Temple. Time is 7 P.M. on December 7th. The price will be the same as in years past. Five dollars with TARC picking up the rest of the tab.

So far I have word from five people that they will be attending. I know that many more are just waiting word from me on how to sign up. Either send me an email or call me on the phone. If you want to you can wait till the dinner to pay.

I will also get word out on the Monday night net about the dinner.

Myron,

I'm like Eddie...If I can stay seated...I can help out. I can be the water boy again providing some relief to our TARC Volunteers. Will there by Golf Carts available? If not, we'll need some type of signage indicating that our vehicles are part of the Volunteers working the parade. At the last one I worked, I was stopped all the time by police wanting to know what I was doing when delivering water to our workers. I had no way of marking my vehicle as a working vehicle.

Southwest Service Area

Amateur Radio Preparedness Exercise

Saturday, November 18, 2006

9am - 1pm, Central Time

Updated as of 11/13/06 and subject to change.

American Red Cross Service Area 4 (Arkansas, Louisiana, New Mexico, Oklahoma, and Texas) will sponsor an Amateur Radio Preparedness Exercise on Saturday, November 18. Participating Red Cross chapters (listed below) may invite members of their local amateur radio community to visit and tour their chapter facility. Hams may have the opportunity to participate in a simulated local disaster response activity that would require the use of amateur radio. Each chapter will develop its own program and "disaster."

In some cases, local hams may work with chapter staff in advance to create the scenario. On Disaster Day hams may be asked to travel to specified locations served by the chapter and report a simulated situation or need to the local chapter headquarters by radio. This could include delivery of critical information regarding the "disaster", or requesting supplies or facilities be obtained or delivered to the location. Each chapter will create its own scenario, and will make its own decision regarding its degree of participation. The overarching goal is to introduce local Red Cross chapters to the disaster communication capabilities of amateur radio, and to reacquaint local ham radio operators with potential Red Cross needs for communicator assistance and other disaster volunteer opportunities.

Statement of Understanding between The American National Red Cross and The American Radio Relay League, Inc.

(click this link for pdf file)

Once the local teams have transmitted their reports or needs to the local chapter, amateur radio operators at each chapter headquarters will be asked to further transmit the local information to the simulated regional Disaster Response Operation Headquarters ("DRO HQ") in Dallas. Of course, the normal communications infrastructure will have failed region-wide: the wired and wireless phone systems will have been overloaded and failed.

Disaster-impacted chapters will include the following:

a.. NW Arkansas Chapter, Tontitown/Springdale (??? Need confirmation to SA4)

b.. Greater Arkansas Chapter, Little Rock (??? Need confirmation to SA4)

c.. White County Chapter, Searcy, Arkansas

d.. Red Cross of Central Oklahoma, Oklahoma City

e.. Tulsa Area Chapter, OK

f.. Cimarron Valley Chapter, Enid, OK

g.. Southeast Louisiana Chapter, Metairie/New Orleans

h.. Southwest Louisiana Chapter, Lake Charles

i.. Louisiana Capital Area Chapter, Baton Rouge

j.. San Juan Chapter, Farmington, New Mexico

k.. Beaumont Chapter, Texas (??? Need confirmation to SA4)

l.. Pecan Valley Chapter, Brownwood, Texas

m.. Crossroads Chapter, Victoria, TX (??? Need confirmation to SA4)

n.. Southwest Texas Chapter, Odessa/Midland

o.. East Texas Panhandle Chapter, Borger, TX

p.. Lamar County Chapter, Paris, Texas

q.. Smith County Chapter, Tyler, TX

r.. Coastal Bend Chapter, Corpus Christi, TX

s.. Central Texas Chapter, Austin

t.. San Antonio Area Chapter, Texas

u.. Greater Houston Area Chapter, Texas (??? Need confirmation to SA4)

v.. Chisholm Trail Chapter, Fort Worth, Texas

w.. Dallas Area Chapter, Texas

Chapters above with the indication (??? Need confirmation to SA4) are welcome to participate, as are any other Red Cross chapters anywhere. However, these early responders have not yet re-confirmed their participation with SA4 Please send an email with chapter and ham contact information to SA4@... . All other listed chapters have confirmed.

LOCAL INFORMATION FOR DALLAS AREA HAMS (click here)

K5D

"Kilo 5 Dallas", Special Event Call Sign

DRO HQ in Dallas will call on, and monitor, the following modes and frequencies. Starting at 9:00 Central Time, and at no less than 30 minute intervals, expect calls on the HF frequencies with content similar to: "K5D Red Cross Dallas calling CQ Red Cross Southwest Exercise" repeated several times. Calls will be made on 40 and 20 meters approximately simultaneously.

a.. HF LSB 7.280 MHz (if occupied work down in 5 KHz steps to 7.230MHz, remain in General Class phone allocation)

a.. The traffic net on 7.290 MHz will not be available to pass traffic for this exercise.

b.. HF USB 14.253 MHz (if occupied work down in 5 KHz steps to 14.233, remain in General Class phone allocation)

c.. VHF 146.96 (PL 110.9) (Thanks to K5JD)

d.. Winlink Address to K5BAW using normal Winlink to Winlink addressing protocol. Message should indicate Chapter, City, and Winlink technology (e.g. VHF Telpac node, HF Pactor I), as well as a short Chapter status message. DRO HQ will be equipped with a VHF Telpac Winlink station. Stations sending messages should expect a reply with addresses of other participating Winlink stations.

e.. RAILS. Northeast Texas chapters within range of the Radio Amateur Intrastate Link System (see http://www.kstvfm.com/rails/) may attempt to call DRO HQ using this mode. Monitoring will be attempted, subject to sufficient resources.

Messages may be free-form and informal (ARRL Radiogram format not required), but should be brief and to the point. Include the name of the originating chapter and its location. Chapters are encouraged to attempt to relay via HF or VHF through non-participating hams. Please be alert for the need to relay within SA4 if propagation requires.

The DRO HQ will be staffed by members of Dallas County REACT, which has provided communications support to the Dallas Area Chapter for many years.

The planned frequencies may change as the event approaches, so check back before the Internet fails on 11/18. If a planned frequency is in use, check the vicinity or try the other band.

Relay Chapters

The following Red Cross chapters have agreed to monitor the exercise and provide relay services in cases where propagation conditions do not permit direct contact:

a.. Greater Kansas City Chapter, Missouri

b.. Midland Empire Chapter, St. Joseph, MO (tentative)

[Other interested chapters please contact DROHQ@...

Red Cross chapters outside the disaster zone are invited to attempt to make contact with DRO HQ and check-in from their chapter locations (either existing facility or established for the operation by a local disaster communications support team).

ECRV units please identify yourself by call sign, ECRV unit number, and actual location.

ECRV 4703, Virginia

ECRV 4707, Texas

ECRV 4711, Illinois

ECRV 4712, California

More Information

Send specific DRO HQ operation questions to DROHQ@arcdallascomm.org

Send Service Area and Chapter participation questions to SA4@...

Sorry that I did not have a sign up sheet for the Christmas dinner available at the last club meeting. The dinner will be at the Wildflower country club in Temple. Time is 7 P.M. on December 7th. The price will be the same as in years past. Five dollars with TARC picking up the rest of the tab.

So far I have word from five people that they will be attending. I know that many more are just waiting word from me on how to sign up. Either send me an email or call me on the phone. If you want to you can wait till the dinner to pay.

I will also get word out on the Monday night net about the dinner.

Yahoo group: Temple_ARC
Date: 2006-11-17 00:42:57 UTC
From: Anthony Mikulastik
Topic: 2841 Message: 2841

The 145.490 Repeater Tone is changed back to 123.0 Hz again. I had the 145.490 Repeater set to Digital Coded Squelch for a while. Steve, NU5D, gave the 145.490 Repeater a check up and it is still alive and well. I thought the TARC members working the Christmas Parade might need the 145.490 Repeater back on Tone Access. The 145.490 Repeater was full scale on my mobile in Lott when I was coming home today.

everyone believes freestanding works, if you don't guide it this will happen in your life time.
or get a hazer and bring the antenna down before a storm hits.

If you go though life and don't pay attention to the weather like the ones in NC did, this will happen. I have experience three hurricanes , 4 tornado's, 2 earthquakes. Let take that back earthquakes don't count in the equation. I do three things when I wake up in the morning , even in Iraq. I pray, I check http://www.spc.noaa.gov/index.html and then dial around the radio and see what's out there.

Ham radio investment is for most of is hard to come by, so don't go thought life and not be prepared.

I thought I would pass this photo I took this AM along for your viewing. What you are looking at is a Triex W-71 tower resting against my house . One of the hinge lugs welded to the base gave way at the base allowing the tower to tip over against the house. On the tower is a Hygain 204BA , 4 ele Hygain 6 mtr. , 11 ele Cushcraft 2 mtr , 11 ele Cushcraft 70 cm. , Cushcraft Ringo Ranger , and wires for 40 and 75 mtrs. The tower is free standing . The base plate allows this tower to hinge in the direction of the camera and is in a 5x5x5 block of concrete . We were expirencing strong winds with gusts in the area of 60mph. The hinge lug on the north side of the tower tore loose allowing the tower to tip toward the house . The most unbeliveable part of this was the repair. All of the repairs were acomplished with about one hour actual work time , two hours of BS and at a cost of $20.00 for the welder and his helper. I should have bought a Lotto ticket
yesterday. My Cushcraft R7 verticle and the repeater anteena (DB224 on another tower) seem to list a little toward the south now but will require no repair. Lucky Chuck

Triangular loop for 6 through 40 meters, and a Slinky dipole for 75/80 meters. The Slinky seems to act as a reflector for the loop; it's installed just behind one of the sides of the loop.

Warren, WR1TX

Tom Olsen <tomolsen@...> wrote:

Have been listening here, and every now and then will get a weak
signal. I've heard voice, and what sounded like a digital signal. Mind
you that I am using an "older" DX-300 with a dipole cut for 40m.
Started listening at about 2:30 P.M.local, and now 3:55 P.M. local
(2030 to 2155 UTC if my calculations are still accurate..)

2875. Stolen Radios

Yahoo group: Temple_ARC
Date: 2006-11-20 15:35:29 UTC
From: Paul Finch
Topic: 2868 Message: 2875

Hello,

Just to let you guys know, it appears that I had two brand new Icom Commercial radios stolen during the Hamfest in Azle last weekend. One was a F 24 and the other a F 43 TR, about $700.00 worth of equipment! They were sitting on the table being displayed along with a Icom F 621 TR which they did not steal.

What is sad, most people can't do anything with the radios since they require the correct software to program and they did not steal the chargers since I did not had any on display! I guess I am partly to blame, I was involved in the running of the Hamfest and had nobody else to man my tables.

If anyone in your area sees and for sale without chargers please let me know, I know it's a long shot but thieves are not rocket scientists, even if they are Hams. I can come up with the serial numbers if needed.

I am very disappointed, I just had to keep thinking 99.9% of the Hams out there are not like that. Suggestion, I am going to have a security camera running full time.

Thanks,

Paul Finch

I am very sorry to hear about your loss Paul. When I first started in this hobby 52 years ago you never had to worry about a "ham" stealing from you. All hams who started that same period will tell you the same thing. But as they have down graded the requirements for a license theft has become a very real problem. Sorry!

Just to let you guys know, it appears that I had two brand new Icom Commercial radios stolen during the Hamfest in Azle last weekend. One was a F 24 and the other a F 43 TR, about $700.00 worth of equipment! They were sitting on the table being displayed along with a Icom F 621 TR which they did not steal.

What is sad, most people can't do anything with the radios since they require the correct software to program and they did not steal the chargers since I did not had any on display! I guess I am partly to blame, I was involved in the running of the Hamfest and had nobody else to man my tables.

If anyone in your area sees and for sale without chargers please let me know, I know it's a long shot but thieves are not rocket scientists, even if they are Hams. I can come up with the serial numbers if needed.

I am very disappointed, I just had to keep thinking 99.9% of the Hams out there are not like that. Suggestion, I am going to have a security camera running full time.

Thanks,

Paul Finch

I am very sorry to hear about your loss Paul. When I first started in this hobby 52 years ago you never had to worry about a "ham" stealing from you. All hams who started that same period will tell you the same thing. But as they have down graded the requirements for a license theft has become a very real problem. Sorry!

I'm not so sure that licensing requirements have anything to do with the increase in thefts. As I recall vividly a few years ago at HamExpo when I was handled security for TARC there, we caught someone who had stolen a radio who had a General class license. I remember how he was caught, who he was, and more.

I am also aware that there have been long-time EXTRAS who were caught stealing as well at other hamfests around the country. This has been a problem for some years now.

It's true that theft has become more prevalent, but I don't buy the line that the "dumbing down" of licensing requirements have led to an increase in crime amongst the fraternity...not for a second.

Steve, don't worry about it...what Ron said was certainly not a reflection on you personally, I believe.

No it's the society we live in, there are people that steal, it has nothing to do with lic class. If parents would raise there kids right then we should not have this kind of issue to deal with.
I suggest that a Plexiglas over the radio's and the camera is a nice touch although someone has to watch the tube.

I believe it was belton hamfest spring 2006 where seller had something stolen. I over heard him saying something about while had the entrance duty.
The human being will do anything till is scared of it, 60 days in jail will not deter them from doing crap like that.

In the middle east they cut off your hands, or put you in hard labor camps for years not days.
the grandmother approach to treating criminals is not working.

my two cents

Hello, TARC,

I have to apologize if I created any hard feelings when I posted about the loss of these radios, I just wanted everyone to know they need to watch their equipment while at a Hamfest. I am a trusting fool, I want to believe everyone is honest. That is not the case.

TARC's Hamfest is one of the biggest and best so I felt that need to express that concern to your club. Guess a little of it is my disappointment with the Ham or Hams that took the radios. I also know that it's a very small minority that does this and you can't blame all Hams for the lack of integrity of a few.

I feel it's more the loss of integrity world wide that leads to these losses, it's also what worries me the most about our society.

Paul

Go ahead with the for sale listings Tom - best to keep things ham related (maybe you store sensitive ham software in a fire proof safe?) and not intended for commercial vendors advertising. PS - commercial folks are welcome to place an ad in our TARC bulletin.

Personal gear you're done using is fine to advertise. Commercial gear, including gear you simply buy to sell, is not. Thank you for asking and list away!

I've a Kenwood TM-G707A that I'd like to sell and would like to get $260 for. This is both 2 meters and 70 cm. This rig has the speech board (I think its a vs2) installed and has both the extended receive and MARS mods for transmit done. It is in excellent condition and comes with all manuals, original packing, mounting hardware, and tyhe mobile mic that allows you to control the rig completely. This rig is probably the most blind friendly rig around, especially for uhf work.

This is, by the way, a mobile rig.

I am very sorry to hear about your loss Paul. When I first started in this hobby 52 years ago you never had to worry about a "ham" stealing from you. All hams who started that same period will tell you the same thing. But as they have down graded the requirements for a license theft has become a very real problem. Sorry!

Subject: TARC Stolen Radios

Hello,

Just to let you guys know, it appears that I had two brand new Icom Commercial radios stolen during the Hamfest in Azle last weekend. One was a F 24 and the other a F 43 TR, about $700.00 worth of equipment! They were sitting on the table being displayed along with a Icom F 621 TR which they did not steal.

What is sad, most people can't do anything with the radios since they require the correct software to program and they did not steal the chargers since I did not had any on display! I guess I am partly to blame, I was involved in the running of the Hamfest and had nobody else to man my tables.

If anyone in your area sees and for sale without chargers please let me know, I know it's a long shot but thieves are not rocket scientists, even if they are Hams. I can come up with the serial numbers if needed.

I am very disappointed, I just had to keep thinking 99.9% of the Hams out there are not like that. Suggestion, I am going to have a security camera running full time.

Thanks,

Paul Finch

Time is running short for getting your reservation in for the TARC Christmas dinner. I sent out email confirmations this evening to everyone I had reservations from. If you think you signed up but aren't sure check with me. Spread the word about the dinner by asking every TARC member you see if the have signed up.

Need to have reservations by November 30th!

Wildflower Country Club
Thursday December 7th
7:00 P.M.

Cost is $5 per person. Payment at the door.

Sent: Saturday, November 11, 2006 4:58 PM
To: Temple_ARC@yahoogroups.com
Subject: TARC Parade info

Attended the Temple Christmas parade meeting on Thursday. TARC is being asked to provide our talents to make it a success. Two tasks are definite and more are being worked on. The parade needs TARC volunteers starting at 2:00 P.M. on Monday afternoon December 4th to man each block were parade entrants will be staging. The staging area has been changed from last year. The areas are now to the north of Adams avenue. Eighth street from Adams to French. Entrants will line up in the two outside lanes facing south. Dignitaries and Military personnel will stage on Sixth street from Adams to Barton again facing south. Side streets will be utilized for some of the entrants. TARC has also been asked to provide a volunteer to ride on the shuttle vehicles. TARC has also been asked if we could provide some workers at the destaging area which is the Temple High School parking lot. Perhaps we will get enough volunteers so that the same ones who start at 2 P.M. do not have to work the destaging area after the parade unless they just want to.

Anyone who is willing to work the parade should send me an email so I can get a count of how many we will have. I think we will need about 8 people at the staging area (that way each person is responsible for only one block) and a couple of people to ride the shuttles. A dozen or more volunteers would be great.

I won't be there unless things change at work, so someone needs to try to get either a group (digital) photo at the organizational meeting and/or, even better, individual (digital) photos of the TARC members at their TARC parade assignments for the website gallery and the bulletin. You can email the digital files to me. Thanks!

2916. 8-Ele Yagi for 902-928 MHz

Yahoo group: Temple_ARC
Date: 2006-11-25 04:48:36 UTC
From: Charlie Schlieper
Topic: 2916 Message: 2916
Attachments: 1 described; binary payloads are missing from this source WARC

Like a good ham, I let my wife have the enjoyment of helping me build an 8-element Yagi for 902-928 MHz, over Thanksgiving. I used a 1/2-in copper boom for the yagi, and adapted it to a 1-in dia rear section for mounting. All of the elements were made out of #6 awg solid copper wire. A brass U-Bolt was installed in the rear, and the 1-in dia rear section has a metal screw-- which allows the antenna to be quickly changed from Vertical to Horizontal polarization. The driven element is a half-folded dipole. All of the copper elements are soldered on one side of the boom for stability. A short length of RG-8x Mini coax, with an N-connector on one end, will be attached to the driven element. This homemade antenna is easy to build and the cost is very reasonable. My cost was close to $20.00, but could have been half of this amount if I had settled for cheaper boom material. Ref: I took my measurements from a 10-element 902-903 MHz Yagi design by WA5VJB, eliminating the front two elements. For details, do a search for "cheap yagi" on Google.

Enjoy Ham Radio!

Subject: TARC 8-Ele Yagi for 902-928 MHz

Like a good ham, I let my wife have the enjoyment of helping me build an 8-element Yagi for 902-928 MHz, over Thanksgiving. I used a 1/2-in copper boom for the yagi, and adapted it to a 1-in dia rear section for mounting. All of the elements were made out of #6 awg solid copper wire. A brass U-Bolt was installed in the rear, and the 1-in dia rear section has a metal screw-- which allows the antenna to be quickly changed from Vertical to Horizontal polarization. The driven element is a half-folded dipole. All of the copper elements are soldered on one side of the boom for stability. A short length of RG-8x Mini coax, with an N-connector on one end, will be attached to the driven element. This homemade antenna is easy to build and the cost is very reasonable. My cost was close to $20.00, but could have been half of this amount if I had settled for cheaper boom material. Ref: I took my measurements from a 10-element 902-903 MHz Yagi design by WA5VJB, eliminating the front two elements. For details, do a search for "cheap yagi" on Google.

Enjoy Ham Radio!

I won't be there unless things change at work, so someone needs to try
to get either a group (digital) photo at the organizational meeting
and/or, even better, individual (digital) photos of the TARC members
at their TARC parade assignments for the website gallery and the
bulletin. You can email the digital files to me. Thanks!

I have a Kenwood TS-570D for sale. This is an hf rig covering 160-10 meters transmit but does not have the 60 meter mod. It receives from something like 50 kHz to 30 mHz. This rig has the voice chip in it so its functions do talk. It is very accessible. Have the rig which is in great shape, manual, original packing, and the mic which comes with it. I'd like $650 for it.

There is a meeting for all parade entrants tomorrow, Monday the 28th at the Mayborn center at 6:00 P.M. I am not sure which room but there should be signs pointing the way. While this meeting is for those that will actually be in the parade I will attend since TARC will be responsible for getting the entrants lined up in the staging area. Any TARC member who is working the parade is also weldome to attend this meeting. This way we can be better prepared as to what to expect on the afternoon of the 4th.

I will post any necessary info after this meeting.

I have 8 people signed up to help with the parade. 10 to 12 would be nice.

2935. 902MHz 5-Element YAGI

Yahoo group: Temple_ARC
Date: 2006-11-28 01:10:37 UTC
From: Charlie Schlieper
Topic: 2935 Message: 2935
Attachments: 1 described; binary payloads are missing from this source WARC

I had a few spare pieces of copper tubing left, so I decided to build another 5-element Yagi for 902-928 MHz. I used a 3/4-inch boom for this one, with 3/8-inch diameter elements. I marked the spots, then drilled 1/8-inch holes through the boom. A round rat-tail file was used to make sunken holes across the top, to cradle the elements in position. Any slight errors in alignment were later adjusted by hand. Stainless steel (6-32 x 1.25in) screws and nuts were used to secure the elements into their slots. A Radio-Shack clamp is shown in the rear.

Element Lengths:
Reflector = 7 inches, Driven Element = 6-3/8 inches, Director #1 = 5-1/2 inches, Director #2 = 5-1/4 inches, Director #3 = 5 inches.

Element Spacing:
Reflector to D.E. = 2.5 inches, D.E. to Dir #1 = 1-1/2 inches, Dir #1 to Dir #2 = 2 inches, Dir #2 to Dir #3 = 3-1/4 inches.

I plan to add a GAMMA MATCH to the Driven Element. In the final stages of testing a homebrew antenna, fine adjustments are sometimes necessary.

Enjoy Ham Radio!

Subject: TARC 902MHz 5-Element YAGI

I had a few spare pieces of copper tubing left, so I decided to build another 5-element Yagi for 902-928 MHz. I used a 3/4-inch boom for this one, with 3/8-inch diameter elements. I marked the spots, then drilled 1/8-inch holes through the boom. A round rat-tail file was used to make sunken holes across the top, to cradle the elements in position. Any slight errors in alignment were later adjusted by hand. Stainless steel (6-32 x 1.25in) screws and nuts were used to secure the elements into their slots. A Radio-Shack clamp is shown in the rear.

Element Lengths:
Reflector = 7 inches, Driven Element = 6-3/8 inches, Director #1 = 5-1/2 inches, Director #2 = 5-1/4 inches, Director #3 = 5 inches.

Element Spacing:
Reflector to D.E. = 2.5 inches, D.E. to Dir #1 = 1-1/2 inches, Dir #1 to Dir #2 = 2 inches, Dir #2 to Dir #3 = 3-1/4 inches.

I plan to add a GAMMA MATCH to the Driven Element. In the final stages of testing a homebrew antenna, fine adjustments are sometimes necessary.

Enjoy Ham Radio!

Myron, KD5OGF will be attending. My wife will be working that night.

Richard

>>> meseckem@... 11/27/2006 5:23 PM >>>

Add to my previous post

Tom KC5KXS (2), Roy N5HQR (2), Paul N5NIR (2), and Steve KE5KLV (2)

That brings the total to 48 people attending.

Who will make it an even 50?

Attachments: 2 described; binary payloads are missing from this source WARC

Over the years, I have built many successful GAMMA matches for Yagis, but this was my first attempt to build one for 900-MHz. Everything is more critical when working with higher UHF frequencies! In HF systems, 1/8 to 1/4 inch difference would not matter, but with 900-MHz, 1.2 GHz, and higher, errors sure tend to be more critical. The gamma tube is only 2-inches long. The short length of *polyethylene coax center wire used in the gamma-- was only 1.1 inches long, not including the 3/16th inch stripped conductor, used to solder onto the female-mounted N-connector. *(Remember, polyethylene is the hard type, and not the "cellular" or "foam" type.)

A special mounting bracket was made to mount the female N-connector, and the lower part of it was secured to the copper boom with a small hose clamp. The "shunt" of the gamma match was made from copper also, and has two round cupped parts on each end to provide a method of adjustment while testing. Once the optimum point was found, for both the capacitance and shunt, the copper shunt was soldered securely. A red rubber cap was placed on the end of the gamma tube.

For optimum SWR, "End Caps" were placed on each end of the Driven Element. They were also made from small cut strips of copper, and formed. The "end caps" were placed on the driven element to see if it was actually slightly short in length, but found to improve the SWR even if they were just placed at the very ends-- not extending the actual length. In disbelief, I removed them only to find it raised the SWR.
The results excellent, with 14.2 watts forward, and very little meter movement on reflected.

This picture shows the process of building the "Gamma Match."

Enjoy Ham Radio!
Charlie, N5TD

2963. DX info for you

Yahoo group: Temple_ARC
Date: 2006-12-01 08:17:57 UTC
From: James Kennedy
Topic: 2963 Message: 2963

An open letter to the DX community:

Looks like the first ARSI (Amateur Radio Society of India) VU7LD activity has begun at 1200 AM (1830Z today) December 1st local time on Kavaratti Island, Lakshadweep. This is the all Indian national team DXpedition. I'd like to bring the following info/request to the DX Community's attention. This group has been told they must sign VU7LD/VU#??? while operating from the number 2 most wanted DXCC Entity. The stroke (/) VU#??? represents the call of the actual operator. I would ask DXers around the world to refrain from working VU7LD on the same band and mode more than once, just because it is a different operator. There is no need to work VU7LD/VU2UR, VU7LD/VU2PAI and VU7LD/VU3RSB all on 20 meters SSB. There will be no awards for the station that works the most VU7LD DXpedition!!! You only need to work one of them per band/mode. It's the same station and will get the same exact QSL card from W3HNK. It would be like working 3Y0X on 20 meters SSB when N2WB was operating and then working K4UEE when he was the op and then working LA6VM when he was the operator. There is no need to dupe or work each operator on every band mode. It's perfectly fine though to work VU7LD on each of the bands and modes you need it. As with any major DXpedition to a rare location, such as the Lakshadweep Islands, the pileups are going to be extremely large. Certain areas of the world will have a more difficult time than other areas. When the operator asks for a certain area please respect their plea. By the way VU7LD will have an on-line log search, probably in a few days, at http://arsi.info/vu7/. Good luck to all and please listen carefully to the operators instructions! See you in the pileups! This team will be QRV until the end of December. VU7RG will be QRV January 15-25th, with an international group of operators. They have a Web page at http://www.vu7.in.

PS. Please post this on your club reflector, other DX reflectors, Website and other DX publications. Thank you in advance.

2970. Christmas parade Instructions

Yahoo group: Temple_ARC
Date: 2006-12-02 01:04:45 UTC
From: Myron Mesecke
Topic: 2970 Message: 2970

This is for those who have volunteered to help with the Temple Christmas parade this Monday December 4th.

We will be using Tony's (WB5TTY) repeater. The frequency is 145.490 and the tone is 123.0.

I want us to meet in the parking lot that is south of the Goodwill store. The store is located on the southeast corner of 4th street and Adams Ave. The parking lot is between Central Ave. and Adams Ave. After we meet each of us can drive closer to our individual posts.

There will be three shuttle vans running from Temple High School to the dignitary area which is on 6th street between Adams and Barton. There will be a motor home at that location for parade officials along with a tent or canopy for the dignitaries. The three shuttle vans and the motor home will need to be manned. Eddie KD5UBP and Mike WB5PBS will be two of the four people for this task. The shuttles will run from 3:30 until 5:30.

The rest of the volunteers will try to man each intersection on 8th street from Adams Ave. going north to Garfield. The primary task for TARC is to get all the parade entries to their proper line up location on 8th street. I will have a map and line up list for each of us. As parade entries arrive we will be checking them off and calling this info in to the parade officials in the motor home.

After the shuttles stop running at 5:30 those manning the shuttles and any surplus help on 8th will be asked to go to the destaging area at Temple High school. TARC has been asked to help with destaging also. This will be more of an eyes and ears task watching the traffic and seeing that the children that are getting off the floats make it safely across the parking lot and to the football stadium. The Temple Police department will have a large presence at the High school and other parade help will also be there. Any help TARC can provide with destaging will be most necessary when the first parade entries reach the high school to help get things flowing properly.

There will be a foot patrol police officer at each intersection along the parade route starting at Adams and 8th and going west to Adams and 23rd street. There will also be police officers on bike patrol along the parade route.

As TARC members are relieved of their duties on 8th street after the parade starts they can relocate on foot along the parade route to provide extra eyes and ears watching for trouble.

Eddie KD5UBP and Michelle KD5WBK with be monitoring both the 145.490 repeater and the county 800 frequency that CERT will be using. They can relay any communication between TARC and CERT should that be necessary. Again, with a police officer at each intersection the police officers can directly call in probably faster
than either TARC or CERT could.

TARC has an excellent reputation for our organizational skills. We were specifically asked to work the staging area because without that being correct the parade is off to a bad start. I believe this is a much more important and better way (in this instance) of serving the community than driving a golf cart to keep vendors out of the street.

I will be emailing this info to each TARC member who volunteered.

Myron

that should work fine in my humble opinion. may folks have run successfully with even less spacing than that. if there is any interaction, it would be additive anyway, and so slight that the effect on your swr would be negligible. 73, john

Looks like the mast is going to be at least 15 feet long and maybe longer - I used 1 3/4 Schedule 40 and that is a little too light - flexes quite a bit - maybe schedule 80 or even Schedule 160. Would be nice also to have the 3 ele StepIr with 40M add on or go for broke and get the MonSTR. I have some experience with one - 216 pounds of antenna. sb

3010. HAM HELPING HAM's

Yahoo group: Temple_ARC
Date: 2006-12-10 15:45:47 UTC
From: GORDON T. BLAND
Topic: 3010 Message: 3010

For about four weeks I had been wallowing around on the ground in the cold and sometimes damp grass trying to put up an indestructible 40' push-up pole with a vertical, two long wires....one 62' x 62' and another 32' 6" x 32' 6"....caught bronchitis and was under the weather for about a week with no production....finally got the thing in the air and the long wires strung out......SWR's about 8 to 1..... I was deciding if I should tear the whole thing down....sell the radio and auto antenna tuner and take up crashing model airplanes again.....

Told Charlie, N5TD! He said let me bring my antenna analyzer over and see if we can find out what is wrong..... In less than 10 minutes he said there is a short in the inverted V's. We lowered the wires to the ground and sure enough, Charlie was right. We couldn't fix it because I couldn't find my soldering gun....guess my wife moved it! I told Charlie I would fix it and get him back over for another "real" test in a day or two.....

Picked up Charlie Friday so "we" (Charlie) could try again.... In no time at all, Charlie said the vertical is good for CB (unholy cow), the long wire was good but something was really wrong with the 32' 6" x 32' 6" wire. Charlie said let's get it down and measure it. Well....I had cut the wire at 30' x 30'....a bit short. No sooner than Charlie had put the tape down he was wanting more wire to splice it and make it longer.....which he did and with the touch of an expert antenna builder. We got it back up in the air and Charlie checked it again and gave his approval. It was really cold Friday but it had no effect on Charlie.

Charlie is a great Ham that helps Ham's.

Charlie, thanks again for your help.

Merry Christmas to you and Kay....and Merry Christmas to all of you Ham's out there.... Christmas year round would be nice...!

Gordon,

Excellent story...Thanks for sharing. Way to go Charlie (N5TD) for helping Gordon and, also, way to go Steve Bosshard (NU5D), Ron Bowden (AA5RT) and Hal Pagel (N5JLL) for helping out my Marine Corps Radioman buddy Steve Stickley (KE5KLV) on his antenna set up. All you guys are great to help some of us out trying to get our stations set up and running and the HAM world is a better place because of folks like yourselves. Your excitement and zeal about HAM radio is catching. Thanks for all your help...Great TARC members doing what they do best.

Attachments: 1 described; binary payloads are missing from this source WARC

It would be a good idea to have base line noise readings BEFORE interference starts. Also, it doesn't look like rural or unserved areas are the target, but instead, head to head competition with existing services. (you do your best business on main street - in this case is suspect higher density population $$$ areas). sb

The City of Austin, Austin Energy and Power Grid Communications have announced the location of the Broadband Over Powerline trial in Austin.

The area of the trial will be in the south part of ZIP CODE 78751. The trial will be in an area generally bounded by Avenue C on the west, East 47th Street on the north, Avenue H on the west and East 42nd Street on the South. A map of the test area is available in the files section of the BPL787 list at Yahoo.com.

This is not the area that was erroneously announced earlier in the UPLC data base. The UPLC data base now reflects the correct information

The target start up date is mid January 2007.

The greatest potential for interference from the trial is in the area of zip codes:

78703
78705
78722
78723
78756
78757

Jerry Hernandez, AE BPL Project Manager, has asked that we understand that this trial system will emphasize and be limited to utility applications (meter reading, etc) and telecom services (Internet, VoIP, video) for AE and City facilities and employees. BPL services including meter reading, WIFI hotspot, video surveillance and VoIP telephone will be attempted at locations within the test area including:

Shirpe Park, 4400 Ave. G;

the Elisabeth Ney Museum, 304 E. 44th Street;

and Fire Station #9, 4301 Speedway.

A ?residential showcase? will be established by PowerGrid Communications at 4307 Avenue D for demonstration purposes.

The BPL system will utilize Corinex model CXP-MVA-GWY devices which, according to their spec sheet, have ?Configurable frequency notching of frequency bands, including Amateur Radio and Restricted Frequency Bands?. The Corinex boxes output OFDM signals in the 2 to 34 MHz. frequency range.

The City and AE have asked that issues and interference reports be handled through a single point of contact, if you believe you are suffering interference from the system contact:

Glen Reid, K5FX
ARRL Austin BPL Team
512 263 5700
K5fx@...

Reports of interference to mobile stations are important, interference to fixed stations carry the most weight, but all interference issues should be reported.

The BPL787 team is not against BPL, we are dedicated to preventing the RF interference it can cause. We look forward to working with the City, AE, PowerGrid and the Austin ham community to insure an efficient, interference free BPL test.

I encourage you to sign on to the BPL787 Group at Yahoo.com to stay informed of future developments.

gr

Glen Reid

3023. New Version DominoEX_FEC

Yahoo group: Temple_ARC
Date: 2006-12-13 04:14:58 UTC
From: Charlie Schlieper
Topic: 3023 Message: 3023

A new version of DominoEX has been released by Con, ZL2AFP,
which contains the option of using FEC with all modes. The code
has also been improved. Even if you're set with FEC turned OFF,
this program will automatically sense FEC-- when received.

I discovered that you can copy your "preferences.ini" file from the
older DominoEXj program, into this new FEC version, and all of
your existing macros will work fine. The only essential things you
have to do to get started, is enter your CALLSIGN and Com Port
into the new program, under Options. The Com Port is selected
under "PTT settings." There is a HELP file included if you need
more information. (Ref: Info from Murray, ZL1BPU.)

Download at:
http://www.qsl.net/zl1bpu/DOMINO/DominoEXFEC%202.0d.zip

Enjoy Ham Radio!

Sent: Wednesday, December 13, 2006 7:34 AM
Subject: [MobileAmateurRadio] Aurora Advisory, amateur radio propagation possibilities?

VALID BEGINNING AT: 00:00 UTC ON 14 DECEMBER
VALID UNTIL: 23:00 UTC (5 pm EDT) ON 15 DECEMBER

HIGH RISK PERIOD: 14 DECEMBER (UTC DAYS)
MODERATE RISK PERIOD: 14 - 15 DECEMBER

PREDICTED ACTIVITY INDICES: 15, 70, 30, 15 (13 - 16 DECEMBER)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: HIGH

POTENTIAL DURATION OF THIS ACTIVITY: MAIN BELT = 12 HOURS
MINOR BELT = 12-24 HOURS

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR AND AFTER LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: MODERATE AFTER LOCAL MIDNIGHT

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: GOOD TO
VERY GOOD

AURORAL ACTIVITY *MAY* BE OBSERVED APPROXIMATELY NORTH OF A LINE
FROM...
(THIS LINE IS VALID *ONLY* IF FAVORABLE STORM CONDITIONS OCCUR)

NORTHERN CALIFORNIA TO NORTHERN NEVADA TO COLORADO TO KANSAS TO
SOUTHERN
MISSOURI TO TENNESSEE TO NORTH CAROLINA.

ACTIVITY *MAY* ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...
(THIS LINE IS VALID *ONLY* IF FAVORABLE STORM CONDITIONS OCCUR)

FRANCE TO NORTHERN ITALY TO AUSTRIA TO SOUTHERN POLAND TO CENTRAL
RUSSIA.

NEW ZELAND AND SOUTHERN AUSTRALIA MAY ALSO SPOT PERIODS OF ACTIVITY
MODERATE TO STRONG ACTIVITY.

SYNOPSIS...

A powerful and well-directed solar flare from active solar
Region 930

was observed early on 13 December. This event has the potential to
produce
periods of moderate to strong (possibly even intense) auroral storm
activity
on 14 December, possibly lingering into 15 December. The most intense
phase
of activity is likely to occur some hours after the initial impact,
which is
currently expected near 07:00 UTC on 14 December (2 am EST on 14
December).
The moon will begin to impinge on observations after it rises
sometime after
local midnight, so the best observations (if possible) will occur
prior to
and near local midnight when the moon is still below the horizon.

This warning will remain valid through 24:00 UTC (5 pm EST) on
15 December. It will be updated or allowed to expire at that time. For
updated information, visit: http://www.spacew.com/aurora/forum.html.
For
real-time plots of current activity, visit:
http://www.spacew.com/plots.html

PLEASE REPORT VALID OBSERVATIONS OF AURORAL ACTIVITY TO:
http://www.spacew.com/submitsighting.html

3028. Hellschreiber Mode - 40mtrs

Yahoo group: Temple_ARC
Date: 2006-12-14 03:12:03 UTC
From: Charlie Schlieper
Topic: 3028 Message: 3028

I was surprised to work four stations in a row on Hellschreiber mode, USB, on 7072.500 kHz, 1000 Hz spectrum (equivalent to 7073.5) using Feld Hell. No DX contacts here at all, just California, South Dakota, Pennsylvania, and Alabama.

The FONT selection in this mode can make an important difference in how others copy your signal. One very good combination font to use is Courier, Bold, size 12.

Gee, I remember when my wife was that size! Having said that, I guess I'm not getting anything for Christmas???

73, Charlie

Topic: 3034 Message: 3034

Attention All Amateurs...

End of an Era: FCC to Drop Morse Testing for All Amateur License Classes (Dec 15, 2006) -- In an historic move, the FCC has acted to drop the Morse code requirement for all Amateur Radio license classes. The Commission adopted a Report and Order (R&O) in WT Docket 05-235 late today. In a break from typical practice, however, the FCC only issued a press release at or around the close of business today and not the actual Report & Order, so some details -- and the effective date of the R&O -- remain unclear for now. Also today, the FCC adopted an Order on Reconsideration, modifying the Amateur Radio Service rules in response to an ARRL request to accommodate automatically controlled narrowband digital stations on 80 meters in the wake of rule changes that became effective at 12:01 AM Eastern Time today. The FCC agreed to carve out the 3585 to 3600 kHz frequency segment for such operations.

OK just judging by the title of this message string what position have most of the amateur radio operators above TECHNICIAN have put themselves in.
Now anyone can be a no coder...

Last months edition of MRT magazine had a really good artical on amateur radio.

I wish I could sit down and put the time into learning the code but everyone learns differently and at different rates.I have a family and two young kids who I send alot of time with.Heck I keep .82 up and monitoring and every so often I throw my call sign out and get no reply.Further more I set my radio on scan to see what other repeters are active and the radio just scans away without locking onto a active frequency.I remember a few years ago the repeters were fill up with traffic heck a few of us here were burning up 147.57 and 446.900 simplex around the Killeen Harker Heights area. Now they are all dead.I am lucky enough to get one weekly contact with Mike N8UID on 147.57.We love simplex.

During some conversations with some of my friends who are no coders had left due to the attitude that most of the higher class operators had taken to the TECHNICIAN license.Instead of being embraced by most we were pushed away and made fun of.I remember a young guy who lived in south Temple, by now I forgot his callsign ,who everyone turned a cold shoulder to except a few of us in Killeen and Harker Heights. I remember a personal conversation with this person and He mentioned he was turned away by folks who had higher class licenses further more I remember attending a Belton hamfest and some upper class operators making fun of this person when he was not persent to defend himself. The time to scorn this person could have been used in a positive manner to help him to make his operation better.

So what happened...Look at my last two sentences.........

This is my opinion....

Concerning the last paragraph, I think I know who this person is talking about...but without a call sign I can't be certain. If it's who I think it is, I know the full story; I won't tell it on the reflector however for certain reasons.

Otherwise, I have to agree with the fact that there are quite a few licensees that are General and above who have alienated the Techs. But there are a few Techs out there in the ham radio world who have alienated the the General and above licensees who genuinely tried to help them out of kindness. The code-no code debate seen on reflectors such as QRZ and eHam haven't helped either.

We knew that the CW requirement was about to disappear; we should have prepared for that more than arguing about which was better (code or no code). And personally, even though I really enjoy CW now it doesn' t matter to me one iota if CW is (or was) a requirement or not.

Education as always is the real key to help our newer licensees, whether they are Techs or Extras. Arguing or downgrading about an operating MODE makes no sense; never did, never will.

So go back to operating, everyone...and stop the arguing and downgrading. OK???

Warren, WR1TX

3046. 5 more new hams in Milam County Area

Yahoo group: Temple_ARC
Date: 2006-12-16 15:20:39 UTC
From: G
Topic: 3046 Message: 3046

We had a successful VE Test session in Cameron tonight. The first session had five people take the test and five passed Technician and one of those almost passed General. We had a second session for a late-comer and he did not make it. Overall, a good nights work.

We have added eight new hams to the Milam county area and two in adjacent counties in just over a month.

I would like to thank Floyd Bumpus, N5EL, Ron Thompson, W5WRE, and Gerald Richmond, N5ZXJ for assisting tonight. They had to do most of the work since I am in recovery from a 10 day stay in bed

That's all of the testing for this year but we will be having a test in Belton on the 13th of January

A very special thanks to FLOYD BUMPUS, N5EL, for helping on very short notice!

Thanks all

Last months edition of MRT magazine had a really good artical on amateur radio.
I wish I could sit down and put the time into learning the code but everyone learns differently and at different rates.I have a family and two young kids who I send alot of time with.Heck I keep .82 up and monitoring and every so often I throw my call sign out and get no reply.Further more I set my radio on scan to see what other repeters are active and the radio just scans away without locking onto a active frequency.I remember a few years ago the repeters were fill up with traffic heck a few of us here were burning up 147.57 and 446.900 simplex around the Killeen Harker Heights area. Now they are all dead.I am lucky enough to get one weekly contact with Mike N8UID on 147.57.We love simplex.
During some conversations with some of my friends who are no coders had left due to the attitude that most of the higher class operators had taken to the TECHNICIAN license.Instead of being embraced by most we were pushed away and made fun of.I remember a young guy who lived in south Temple, by now I forgot his callsign ,who everyone turned a

cold shoulder to except a few of us in Killeen and Harker Heights. I remember a personal conversation with this person and He mentioned he was turned away by folks who had higher class licenses further more I remember attending a Belton hamfest and some upper class operators making fun of this person when he was not persent to defend himself. The time to scorn this person could have been used in a positive manner to help him to make his operation better.
So what happened...Look at my last two sentences.....
This is my opinion....

Attention All Amateurs...

End of an Era: FCC to Drop Morse Testing for All Amateur License Classes (Dec 15, 2006) -- In an historic move, the FCC has acted to drop the Morse code requirement for all Amateur Radio license classes. The Commission adopted a Report and Order (R&O) in WT Docket 05-235 late today. In a break from typical practice, however, the FCC only issued a press release at or around the close of business today and not the actual Report & Order, so some details -- and the effective date of the R&O -- remain unclear for now. Also today, the FCC adopted an Order on Reconsideration, modifying the Amateur Radio Service rules in response to an ARRL request to accommodate automatically controlled narrowband digital stations on 80 meters in the wake of rule changes that became effective at 12:01 AM Eastern Time today. The FCC agreed to carve out the 3585 to 3600 kHz frequency segment for such operations.

I was afraid that this would be taken in the wrong sense. My intent was that another obstacle to entering ham radio had been removed, and I intended nothing at all derogatory to any license class. Remember, lots of folks started as Novice. There are also lots of folks who find a niche as a tech or general, and enjoy staying where they are at.

20 years ago, there was hardly any elbow room on 75 meters in the evening. Higher bands were pretty much down at night, and 75 was crowded. Today, there is lots of open space, and as the WW2 folks die out, new folks have not stepped up to the plate. Perhaps this will encourage folks to get into the hobby.

Please accept my sincere apology if I offended anyone with the "now anyone can be a no coder" subject line. And now, if I read things correctly, tech have new privilages in the HF bands as well.

Not a bad Christmas present from the FCC. 73,

Steve, Novice KA5AMI, Tech N5EOM and after 10 years of Novice and Tech, NU5D.

Topic: 3053 Message: 3053

From the ARRL Bulletin ARLB030 FCC to Drop Morse Testing for All Amateur License Classes

"Typically, the effective date of an FCC Order is 30 days after it appears in the Federal Register. That would mean the Morse requirement and the revised 80-meter segment for automatically controlled digital stations would likely not go into effect until late January 2007."

The ARRL will provide any additional information on these important Part 97 rule revisions as it becomes available.

Well, then maybe that's something we can work on. Even my XYL might try the code again...even if it's at 2-3 wpm! All of this would be done using a straight key unless I get ahold of a RigBlaster (likely at income tax time).

Digital ops are another possibility, with PSK31 and other modes possible. Even if the XYL decides she still can't get the code, the digital modes are still a possibility.

3057. "Phone" Operation Question

Yahoo group: Temple_ARC
Date: 2006-12-16 19:56:23 UTC
From: WR1TX
Topic: 3057 Message: 3057

I have what may seem a silly question (asked by a person interested in ham radio recently):

What is considered "phone" operation?

To me, "phone" operation is simply voice operation...which means that SSB, AM and FM could be used. Of course, it's not that simple when it comes to HF operating as opposed to VHF and above. Band plans come into play in most instances if not all.

Thoughts, anyone?

Actually - I think it is a sad day for FCC to drop the code requirement. Society has changed a lot from WW2 days. We want something but not bad enough to work for it. Code has always and will always be the cornerstone of Amateur Radio. The real sad fact is - 20 years from now - no one will even know what cw is. And could probably care less. Good luck with the future of Amateur Radio. I doubt you will hear the old timers much anymore.

From: ke5c
Topic: 3059 Message: 3059

> She got pretty addicted to the code and prefers it which is kind of
> strange as she really likes to talk <g>.

this is not strange at all. talking in morse is no different than talking in any non-native tongue. once you reach the conversational plateau, you literally chat in morse. you hear sounds and understand what is being said automatically. morse is learned in two or three steps or stages or levels. some folks, probably most, start at the lowest level - double-translating. they translate a sequence of sounds into dits and dashes, look that sequence up in a mental table, and find the matching letter. this works up to 10 or so wpm and is the quickest way to be able to pass the now historical 5 wpm code test. to pass the 13 wpm challenge, however, folks had to be at the second (some would argue the true first) level of morse comprehension, the level where you "hear" a letter. a sequence of sounds pops up in your mind as a letter. a few lucky folks - i was not one - start at this level. this takes longer to reach than just double-translation, but once you master this level, you can copy up to about 25 wpm.

a lot of folks stop here, at the letter comprehension level. they reach for pencil and paper while copying. they write the letters down, then visually translate them into morse - sort of like reading morse rather than hearing morse. the final level, the conversational or word level happens when a sequence of sounds pops up in your mind as a whole word. until you reach this level, you do a different kind of double-translating than the beginner does, but it still slows your down. you actually hear a sequence of letters, but you still have to translate those letters into words, and that is a separate mental step. at 25 to 30 wpm most brains can't do both - keep letters they are hearing alive in their consciousness while at the same time building those letters into words. that is very tiring, fatiguing, and frustrating. to push to the truly conversational level, you must hear entire words, and that comes with practice at a speed just out of your comfort zone. finding the opportunity to do this is getting harder and harder as activity, especially morse activity, falls. alas, we are going the way of the railroad telegrapher, into the history books.

why do folks stay with morse long enough to reach the conversational level? in the old days it was almost natural. very young ham radio ops learned cw when their brains were still language pliable, and many moved quickly to the word level. now we all start late, when language learning is much more difficult. an interesting parallel is the way languages are taught in our schools - not until junior high by which time our language learning abilities are quite diminished. in europe children speak two or three languages by the time they finish elementary school. these days, i think those who stay with morse to the

conversational level are folks with an interest in language per se. morse is a little different also n that the conversing is still a little slower than a more complex language, i.e., a language with more than two phonemes (dit and dash) - english has forty-two, and somehow morse is just plain relaxing. maybe it keeps other sounds (distractions) out of your consciousness.

73, john

Doing away with the code requirement will probably be a good thing for ham radio although I had to search my soul to be able to accept this FCC decision when I remember how hard I worked to be able to do 20 wpm. It is good thing because it will bring more hams into the hobby that were frightened away from the hobby by the code requirement. Also, those that enjoy using the code will continue doing so which means cw will always be an important part of the hobby.

3063. My 2 Cents

Yahoo group: Temple_ARC
Date: 2006-12-17 07:45:01 UTC
From: Hal and Cindy Pagel
Topic: 3063 Message: 3063

I have read the opinions on code/no code. One fact remains certain. The FCC has decided that code requirement is gone. My best advice is live with it. I worked to get my ticket and had to have code. When they added no code tech, I didn't get mad, heck, I see it as a way to get more people interested in our great hobby. I am proud to say that just here in our area, we now have a large number of no coders on the air, and I feel that they are taking the hobby as serious, if not more so, than a lot of the coders. I got my ticket to get on the air and enjoy fellowship with others that have the same intrest in radio. You hear these folks up and running almost daily. I am proud to say that I have made many new friends in this group. If we work hard with the new generation of hams, it is very likely that some may show interest in cw. If we make them feel that they are any less deserving of using the hobby to it's fullest, then we will have done ourselves and those that went before us a disservice. Those that feel that like they are no longer intrested in getting on the air because of this, I suggest you look into you heart and find out why you started. Lets ALL get together and promote one of the greatest hobbies in the world.

Merry Christmas and Happy New Year to everyone.

Hal Pagel N5JLL

Doing away with the code requirement will probably be a good thing for ham radio although I had to search my soul to be able to accept this FCC decision when I remember how hard I worked to be able to do 20 wpm. It is good thing because it will bring more hams into the hobby that were frightened away from the hobby by the code requirement. Also, those that enjoy using the code will continue doing so which means cw will always be an important part of the hobby.

Subject: Re: TARC Now anyone can be a no coder...

Well, then maybe that's something we can work on. Even my XYL might try the code again...even if it's at 2-3 wpm! All of this would be done using a straight key unless I get ahold of a RigBlaster (likely at income tax time).

Digital ops are another possibility, with PSK31 and other modes possible. Even if the XYL decides she still can't get the code, the digital modes are still a possibility.

>
> Don't give it up just yet, Tom. There are still some of us out there that care about the newer hams. My XYL is licensed and now she's thinking about upgrading, as well as possibly looking for other YLs to chat with...so maybe there is an opportunity for Dee to get her license and be able to talk to other YLs in the area!

From: Dave Bumpus
Topic: 3063 Message: 3067

I knew I liked you for some reason Hal

Hal and Cindy Pagel <hpagel@...> wrote: I have read the opinions on code/no code. One fact remains certain. The FCC has decided that code requirement is gone. My best advice is live with it. I worked to get my ticket and had to have code. When they added no code tech, I didn't get mad, heck, I see it as a way to get more people interested in our great hobby. I am proud to say that just here in our area, we now have a large number of no coders on the air, and I feel that they are taking the hobby as serious, if not more so, than a lot of the coders. I got my ticket to get on the air and enjoy fellowship with others that have the same intrest in radio. You hear these folks up and running almost daily. I am proud to say that I have made many new friends in this group. If we work hard with the new generation of hams, it is very likely that some may show interest in cw. If we make them feel that they are any less deserving of using the hobby to it's fullest,
then we will have done ourselves and those that went before us a disservice. Those that feel that like they are no longer intrested in getting on the air because of this, I suggest you look into you heart and find out why you started. Lets ALL get together and promote one of the greatest hobbies in the world.

Merry Christmas and Happy New Year to everyone.

John, my xyl doesn't really do much with languages but she's one of the best I've know with music and some testing I've done on her indicates there's some musical translation going on for her (I am a clinician). She was doing 30-35wpm but even when she waqs slower she said it was about the mystery of talking to someone you couldn't hear and figuring out about the person by their coding style.

I picked up a Russian military straight key. Its a bit different from those that we use because its designed to use with a bent elbow. There's room for lots of electronics in the box its mounted in so you never know what you might do with it. Might be a way to get some folks interested in code. I also still like the idea of a piece of wire, a tuna fish can, and a couple parts to make a cw transmitter. You sure won't do that with digital stuff and its so basic even blind folks can solder it <g>.

3071. TARC, a Great bunch!

Yahoo group: Temple_ARC
Date: 2006-12-17 23:58:48 UTC
From: Paul Munsel
Topic: 3071 Message: 3071

I've stated it before, in type, in person, and voice. The people who make up TARC are a Great bunch of folks. I have had more help here, than any other Group of people. This is not just Ham oriented, but in friendship as well. At the Expo Center, I have never met anyone who did not make me feel like I had known them for years. This goes a long way. Now, this is not just the TARC Group I guess, but the many others who are not members of the Club. It takes a lot of effort, and determination by each one to make any event work. We have groups who serve with the storm spotting, testing, setting up, and operating the 2 swap fests, and even the coffee meets. Any time I have asked a question, I have been met with a number of folks who either answered, or offered to help. This is just me, not the many others who have been helped. From time to time, feathers get ruffled. Most of the time, they settle down, and we go on. This is very good. There has been much talk ALL OVER the groups, websites etc about the latest intended decision concerning code. OK, if they do away with it, many will get automatic upgrades. Some won't. I don't have the endorsement. I do however know the Morse Alaphabet, but have not taken the test. Am I lazy?? Nope, just don't have any reason to have it to use other bands... I can use it at any time on the bands I have access to, and have had some contacts with it. I learned it many years ago, and one of the first times I used it, an "older gentleman" who worked for the Government and lived in Arizona answered me... His "employer" got ahold of me a few years later, and provided me with "expense paid trips" over this World. I had lost interest by the time I got home. My interest was rekindled in the late '80's, and when I was ready to test, the Morse requirement had been lifted for the Tech ticket. My plans have been to get the endorsement, but just never did. Now, I hear I may be able to be Grandfathered from those earlier years. Most of what I do is right around this area, so I am OK. I retired from Public Safety, and don't plan to travel away from the area anymore to work, so it's not really needed to "call home". I learned a long time ago to not take offense at things, life is too short. The time I waste on being upset, is better spent on moving forward. One gentleman in this Group and I had a difference of opinion a few years ago. I hold no grudge, and would welcome a note from him. No problem... Now, let's get on with being the Great Bunch I know you folks to be!
73,
Paul Munsel N5XMV
Karen Munsel KE5LGK (The new girl on the block)

Happy Birthday to Eula, and her Birthday Buddy, Roland, WA5IEX. I operate 50.125 usb from time to time. http://k1six.com/50dx_frames.html is a good link for DX spotting. Also K5AB has a beacon on 50.68 thereabouts - broadcasting from Mullins. Charlie like FM on 6 - can't remember the FM calling channel but am sure he will reply as well - also w5ncd has 6M gear. sb

Wish Eula and Roland Happy B Day for me, Steve NU5D

N5OOH is sporting a NEW self supporting crank up tower / deer stand. Nested at around 22 feet, Ray has a work platform to service the soon to be installed Mosley PRO67 Beam antenna.

Congratulations on the new addition to the North West Hills Skyline, home to N5TFK, KD5ABQ, N5LKP, AD5RN (when home from college) and NU5D, and of course N5OOH and Sylvia KD5USI.

Go sick’em Ray (maybe this is a Birthday Present???) and best wishes from TARC,

Steve NU5D

I noted that Ronnie, WA5NQR, recently lost his XYL Breta to cancer. She was on my nursing unit (6 East Oncology) at Scott and White several times. I saw Ronnie there almost every day Breta was a patient, doing whatever he could for her whenever he could.

It was extremely tough being in the work position I was in, trying to do my job, while watching a friend's loved one dealing with what was a very devastating illness. I talked with both Ronnie and Breta each and every day, and I understood what they were dealing with...especially with what I see every day at work and with a cancer history in my XYL's family.

Breta was a sweet lady, and she will be dearly missed. Our condolences are with you, Ronnie; let us know if you need anything at all.

I was getting ready to make a new run of labels for the bulletin. There is a field in the member database that shows whether folks get a bulletin or not. In some cases it made sense because multiple family members had the same address, but some make no sense at all. For now I've left it set the way it was, but if you are a club member who is paid up but not receiving a bulletin yet want one, email me ASAP.

3100. How bout a Winter Field Day??

Yahoo group: Temple_ARC
Date: 2006-12-24 16:00:34 UTC
From: G
Topic: 3100 Message: 3100

How bout a Winter Field Day??

http://www.spar-hams.org/contests/winterfd/index.php?pg=2

Society for the Preservation of Amateur Radio
The SPAR Winter Field Day
Purpose: To encourage emergency operating preparedness in the
winter.

When: 24 hours from 12:00 noon January 13, 2007 to 12:00 noon
January
14, 2007 local time. Station set up may begin no earlier than 8:00
AM
local time on January 13, 2007.

Bands: All bands, except 12, 17, 30 and 60 meters.

Modes: Any mode.

Categories:

a) Number of operators: 1, 2, Multi
b) Site: Indoor, Outdoor, Home

For example, 2 operators at a remote campground would be 2O, 1
person
at home would be 1H, 5 club members operating from a community
center
would be MI.

Exchange: Callsign, True RS/T (not all 599), Category, local outside
temperature (with F or C). For example 1 person from a campground
where the temperature is 28 F might send "KX5XYZ 449 1O 28F"
or "KX5XYZ 449 1O -2C"

QSO Points: 1 point per QSO, irregardless of band and mode. The
object is to be able to communicate and in an emergency it doesn't
matter what band and mode is used. Busted exchanges will be
penalized
by 1 additional point for each missed exchange or callsign.

Multiplier: Count 1 multiplier for each mode operated per band. For
example, operating CW and Phone on 80, 40, 15 and 10 meters, CW and
PSK31 on 20m, FM simplex on 2meters and satellite on 1.2 GHz would
be
a total multiplier of 12.

Bonus: Count 1000 points if commercial power is not used, 1000 points
if outdoors and 1000 points if not at home. For example, operating outdoors in your backyard without commercial power would be 1000 + 1000 = 2000 points (outdoors, no commercial power), while operating from a campground tent using commercial power would be 1000 + 1000 = 2000 points (outdoors and not home).

Final Score: QSO Points x Multiplier + Bonus Points.

Logs: Logs should be submitted to "winterfd@..." by
February 15, 2007 to be considered.

Results will be posted on the SPAR website and included in The Roundtable. Pictures, description of operations and logistics are encouraged and welcome.

Definitions:

Location - the place where an amateur station is setup for the contest.

Home - operating from the place where an amateur station is normally established. If the station used in the contest is setup before 8AM local time, it is a home operation.

Indoor - operating from inside a building at a temporary location where amateur radio is not normally available, including community centers, etc. If it has a permanent roof and walls, it's indoors.

Outdoor - operating from remote locations with no permantent building, including campgrounds, tents, RV's, etc.

Band - the normal amateur band allocations recognized by the ITU, i.e. 160, 80, 40, 20, 15, 10, 6, and 2 meters, plus the UHF bands. To
be counted as a band, at least 1 valid QSO must have taken place on the band during the contest. 75 meters counts as part of 80 meters.

Mode - CW, Voice (including SSB, AM, FM), Digital (including PSK, RTTY, and soundcard modes), SSTV, satellite.

Operator - Any person that operates the radio, keyboard, microphone or CW key, including logging assistance. This does not include non-operators, such as someone who brings food, but does not participate in operating.

Miscellaneous:

- All rules governing amateur radio must be observed throughout.
- The decisions of the SPAR BoD is final.

"Object: To work as many stations as possible on any and all amateur bands (excluding the 60, 30, 17, and 12-meter bands) and in doing so to learn to operate in abnormal situations in less than optimal conditions. A premium is placed on developing skills to meet the challenges of emergency preparedness as well as to acquaint the general public with the capabilities of Amateur Radio."

So Field Day has three aspects. First, it is a contest (work as many stations as possible), and you will find the rules on the ARRL website under "Contest Forms and Rules". Second, it is an exercise in emergency preparedness. Finally, and in this day and age possibly most important, is it an advertisement for amateur radio. Oh, although not mentioned as an object by the ARRL, I've always found it to be a lot of FUN, even when it rains.

3109. BPL Tests Video

Yahoo group: Temple_ARC
Date: 2006-12-26 05:56:25 UTC
From: WR1TX
Topic: 3109 Message: 3109

For those who may not have an idea what BPL interference sounds like and what it can do at HF frequencies, check out this link:

http://video.aol.com/

Type in "Amateur Radio" in the Search bar and scroll through the results. You'll see several videos that show what BPL can do, either in a fixed or mobile setting.

It's free to visit this AOL site, and many of these BPL videos will use Windows Media Player with no problem. Those with broadband Internet access will have the best results.

There will be a TARC board meeting this Thursday, December 28th at 7:00 P.M. at Mike LeFan's house.
Outgoing and incoming officers need to try to attend since leadership duties are passed to the new officers at this meeting.

From 31st street, take Avenue R eastbound. Turn right onto 13th street.
Mike's house is on the corner. That will be the southwest corner of
Avenue R and 13th street.

3114. Fw: [Tidelands] BOATERS MUST NOT OPERATE 121.5/243 MHZ EPIRBs AFTER 31 DECEMBER 2006

Yahoo group: Temple_ARC
Date: 2006-12-28 14:11:13 UTC
From: paul molina
Topic: 3114 Message: 3114

Subject: Fw: [Tidelands] BOATERS MUST NOT OPERATE 121.5/243 MHZ EPIRBs AFTER 31 DECEMBER 2006

Not sure how many boaters we have out there, but you may want to read this if you have emergency beacon capabilities...

Subject: [Tidelands] BOATERS MUST NOT OPERATE 121.5/243 MHZ EPIRBs AFTER 31 DECEMBER 2006

BOATERS MUST NOT OPERATE 121.5/243 MHZ EPIRBs AFTER 31 DECEMBER 2006

WASHINGTON - The Coast Guard reminds all boaters that beginning January 1, 2007, both 121.5 and 243 MHz Emergency Position Indicating Radio Beacons (EPIRBs) are prohibited from use in both commercial and recreational watercraft. Boaters wishing to have an emergency rescue beacon aboard their vessel must have a digital 406 MHz model.

The January 1, 2007, date to stop using 121.5 MHz EPIRBs is in preparation for February 1, 2009, when satellite processing of distress signals from all 121.5/243 MHz beacons will terminate. Following this termination date, only the 406 MHz beacons will be detected by the International Cospas-Sarsat Satellite System which provides distress alert and location data for search and rescue operations around the world.

The regulation applies to all Class A, B, and S 121.5/243 MHz EPIRBs. It does not affect 121.5/243 MHz man
overboard devices which are designed to
work directly with a base alerting unit only and not with the satellite system.

This change, in large part, was brought about by the unreliability of the 121.5/243 MHz beacons in an emergency situation. Data reveals that with a 121.5 MHz beacon, only one alert out of every 50 is a genuine distress situation. This has a significant effect on expending the limited resources of search and rescue personnel and platforms. With 406 MHz beacons, false alerts have been reduced significantly, and, when properly registered, can usually be resolved with a telephone call to the beacon owner. Consequently, real alerts can receive the attention they deserve.

When a 406 MHz beacon signal is received, search and rescue personnel can retrieve information from a registration database. This includes the beacon owner's contact information, emergency contact information, and
vessel/aircraft identifying
characteristics. Having this information allows

the Coast Guard, or other rescue personnel, to respond appropriately.

In the U.S., users are required by law to directly register their beacon in the U.S. 406 MHz Beacon Registration Database at: http://www.beaconre gistration. noaa.gov/ or by calling 1-888-212-SAVE. Other users can register their beacon in their country's national beacon registration database or, if no national database is available, in the International Beacon Registration Database at https://www. 406registration. com/.

The United States Coast Guard is the lead agency for coordinating national maritime search and rescue policy and is responsible for providing search and rescue services on, under and over assigned international waters and waters subject to United States jurisdiction.

Morse Code: A Fading Signal

Hudson/Topical Press Agency/Getty Images

A worker at the Central Telegraph Office of the post office in London using Morse Code in 1932, which was soon replaced by teletype machines.

Peter DaSilva for The New York Times

With thumb and forefinger barely touching the two metal ends of a Morse paddle, a ham operator unleashes a stream of dits and dahs.

The language of dots and dashes has been the lingua franca of amateur radio, a vibrant community of technology buffs and hobbyists who have provided a communications lifeline in emergencies and disasters.

But that community has been shaken by news that the government will no longer require Morse Code proficiency as a condition for an amateur license. It was deemed dispensable in part because other modes of communicating over ham radio, like voice, teletype and even video, have grown in popularity.

While the decision had been expected, some ham radio operators fear that their exclusive club has been opened to the unwashed masses — and that the very survival of Morse Code is in question.

“It’s part of the dumbing down of America,” said Nancy Kott, editor of World Radio magazine and a field representative for the HYPERLINK "http://topics.nytimes.com/top/reference/timestopics/organizations/c/centers_for_disease_control_and_prevention/index.html?inline=nyt-org"Centers for Disease Control and Prevention in Metamora, Mich. “We live in a society today that wants something for nothing.”

A woman in a mostly male world, Ms. Kott is one of about 660,000 licensed ham operators in the United States and is the American leader of Fists CW Club, an organization that calls itself the International Morse Preservation Society. (An “open fist” was the hand position typically used by telegraph operators when sending Morse, which is sometimes called Continuous Wave, or CW. And in ham radio slang, someone who sends fine code is said to have a good fist.)

Within 48 hours after the Federal Communication Commission’s move this month to drop the Morse requirement, a discussion on HYPERLINK "http://www.eham.net"www.eham.net ran more than 380 messages and 57,000 words long, the equivalent of a short novel. The postings were divided roughly evenly between those lamenting and praising the commission’s decision.

“CW is just another mode and should not be afforded any special priority over others,” wrote K4UUG, who like many radio aficionados identified himself online using his radio call sign. “Proficiency should not be required for those who do not wish to use the mode.”

As part of its decision to eliminate the Morse requirement, the commission made essentially the same point.

Inside a hilltop trailer above HYPERLINK "http://topics.nytimes.com/top/reference/timestopics/organizations/s/stanford_university/index.html?inline=nyt-org"Stanford University in Palo Alto, Calif., a couple of veteran coders seemed to be taking the commission’s decision in stride earlier this week. In a room cluttered with electronic equipment, they translated the dits and dahs that beeped in the background

at dizzying speed, the chatter between someone in Canada, VE6NL to be precise, and someone off the coast of Antarctica, VP8CMH.

“It’s a bit like a foreign language,” said W6LD, whose real name is John Fore, a securities lawyer at Wilson Sonsini Goodrich & Rosati, a prominent Silicon Valley firm. “You learn it and it’s fun to use it.”

With thumb and forefinger barely touching the two metal ends of a Morse paddle, W6NL, a k a David B. Leeson, unleashed his own stream of dits and dahs with the ease of a virtuoso, joining the global conversation. “I fell head over heels for amateur radio when I was 4 or 5 years old and heard Morse Code signals from afar at the station of a 14-year-old,” said Mr. Leeson, 69, a consulting professor of engineering at Stanford. “I still remember the thrill.”

The thrill turned into a hobby, and the hobby turned into a career in technology. In 1968, Mr. Leeson founded California Microwave, once a thriving telecommunications equipment company but now defunct. Now radio and Morse are just for fun, said Mr. Lesson, who is faculty adviser to the Stanford Amateur Radio Club, which once counted William R. Hewlett and David Packard as members.

Mr. Leeson and Mr. Fore are both active in radio contests, 48-hour competitions in which hams try to contact as many other hams as possible, often using Morse. Mr. Leeson has a station in the Galapagos Islands, where he goes several times a year with his wife, Barbara (K6BL), for contests. They once contacted as many as 17,000 other hams in a weekend. Mr. Fore, who is 50, and got his first license when he was 10, has a station in Aruba.

They embody the kind of utility-free passion for Morse that the futurist Paul Saffo said would ensure its survival.

“Freed from all pretense of practical relevance in an age of digital communications, Morse will now become the object of loving passion by radioheads, much as another ‘dead’ language, Latin, is kept alive today by Latin-speaking enthusiasts around the world,” Mr. Saffo, a fellow at the Institute for the Future, wrote in his blog.

Morse Code was first devised in the 1830s for use with the telegraph. It later became an essential part of civilian, maritime and military radio communications. But the military has largely abandoned its use in favor of newer technologies, and the Coast Guard stopped listening for Morse S O S signals at sea during the 1990s.

The F.C.C. first lifted the Morse Code requirement for entry-level licenses in 1991. It later dropped proficiency requirements for higher-level licenses to five words a minute, from 20. And after international regulations stopped mandating knowledge of it in 2003, it was only a matter of time until Morse Code was no longer required in the United States. The requirement will formally be phased out sometime next year.

The demise of the Morse requirement, however, could be a boon for ham radio itself. After the F.C.C.’s decision, the American Radio Relay League, an organization representing ham radio operators, said demand for information about radio licenses surged from about 200 in a typical weekend to about 500.

“We are very pleased to see that,” said David Sumner (K1ZZ), the league’s chief executive.

That is no consolation for the most avid defenders of Morse.

“There is something magical about being able to put two wires together and start going dit-dit-dit dit-dit,” said Ms. Kott, or WZ8C. “We are just going to have to get on the air and do what we do and hope for the best.”

KB5YA, Health

Visited with him this evening. No significant change noted from
yesterday. He is to have xrays of his upper back tomorrow. He is to
have another MRI scheduled also. Probably won't happen until middle of
next week due to holiday. He seemed to have overall slight
improvement daily until 4-5 days ago. Since then there has been some
down hill slide if anything. he cannot sit up at all now, where he
could sit up 4-5 hours by last weekend in the wheelchair. He has
vertigo and nausa when setting up. The RN told me this evening that
could be caused by being bedridden for so long.
Keep him in your prayers. He has a long road to recovery 12/29/06

The following two pictures show how easy it is to modify
an existing Butternut vertical antenna, for 60-meters.
Tap the bottom 75m coil about 10-1/2 turns from the
bottom, and adjust for an optimum match.

73,
Charlie, N5TD

Unsuspecting TARC Member Mike Sherrod, WB5PBS gets loaded on New Year's Eve, inductively, that is. 2, 105 turn X 2 1/2" coils might do the trick for making a 75 Meter doublet radiate more effectively on Top Band.

Happy New Year from Steve NU5D

3123. John, KE5C THP amp question

Yahoo group: Temple_ARC
Date: 2007-01-01 11:05:03 UTC
From: James Kennedy
Topic: 3123 Message: 3123

Hi John, I read you review of the THP HL 1.5Kfx , 29 Nov 2006

If you could expand after the 29 Nov 2006 review, Was this a pre-production model? I see some reviews were after the pre-production and they had no problems I'm amp shopping the pricing that THP is good, I'm also looking at the Acom 1000 now it's not a Mfet amp but it gets great reviews also. I love contesting and Dx so I change bands quite often, the more plug and play it is the better for me although the Acom 2000a and the Alpha 9500/PW-1 are out of my league. I'm quit sure that Ameritron ALS-600 fit my game, it's not true plug and play. If you want to keep this off the reflector email me directly, I just brought a IC-765pro3 and I want to pair up to very good amp.

thanks
Jim

true, but steve has had trouble with the autotuner and trouble getting
an accurate schematic and service information, so as long as it doesn't
break you'ld be okay.

> Hi John, I read you review of the THP HL 1.5Kfx , 29 Nov 2006
> If you could expand after the 29 Nov 2006 review, Was this a
> pre-production model? I see some reviews were after the pre-production

most of the thp amps in the eham.net reviews are production as was mine.
there are four mosfet finals. i (and at least two others) had failures
when the amplifier was used properly - correct band, correct tuned
antenna, correct drive levels. in my case i lost one of the four
devices. the amp worked otherwise. it just put out about 675 and
instead of 925 watts. okay, random failures happen.

amps need protection logic because ops, especially tired contesters,
make band mistakes from time to time. i've hit alpha 87a's, al-1500's,
al-1200's, tentec centurions (3-500z's), and steve's mackay marine
mosfet kw out of band, and nothing adverse has happened. the one time i
hit the thp out of band, 3 of the 4 mosfet's bit the dust. others have
commented that there is no protection in that amp for such an event.
thus the only way to safely use the thp is with automatic bandswitching,
which you could do with your rig, to be certain you are always on the
correct band. the thp does not autosense the band as do some of the
other autoband or autotune amps, it relies on the radio telling it what
band you are on. i wasn't using that feature. at that point, i
returned the amp for credit (less substantial shipping costs).

i think of the thp 1.5kfx as a "delicate" amp. if you are very careful,
you'll probably be very happy. the 1.5 kfx seems to push the device
envelope more than the 1.0 and 1.2 models, and i think thoses have held
up better. right now i am waiting for the elecraft amps to hit the
market - expected in february 2007 to receive fcc approval:

http://www.elecraft.com/news.htm - look down the page a bit.

73, john

3134. Re: TARC John, KE5C THP amp question

Yahoo group: Temple_ARC
Date: 2007-01-02 08:18:45 UTC
From: James Kennedy
Topic: 3123 Message: 3134

I wander is it even conceivable to build a bullet proof MosFet amp? or would the profit to cost ratio would make non attainable by the Avg Ham.

The picture on the Electra Craft web page is showing a 800 watt model hum will Electra Craft offer a 800 and 1500 watt model, wonder what the cost of the amp will be once FCC approval is achieved. I have a SB-200 just back from the doctor, 5 years of hard DXing it needed a tune up. My tower is in transition right now , I gave away my HF beam to kd5tat hoping it drive him to pass the code, but the FCC step in made that dream go away. My plan is to build the ultimate personal Dx station and VHF contest station. The products out there right now it's really hard to build what I want. I will have these Rigs TS-2000 and IC-756pro3 , and I'm shopping for AMP and a HF beam

If I pair up the Steppir antennas to a Mosfet amp , they have a if memory serves me the steppir beams have a 1.7 MHz rate for tuning and knowing me I would blow the amp by keying up before my antenna was tuned or I would have to change my operating habits or get good insurance .

So I'm stuck between a rock and hard place. So the search goes on for the right amp and antenna combination, two DX friends I know 9k2hn and S57S have told me best fit would be the Optibeam and Acom 2000A. I had glitter in my eyes when I designed my tower it;s placement was made just for the Steppir beams. I'm not sure if a interlace beams is better than steppir beam there are many combinations I could use, and when you going to spend about 5k on the setup you want to make the right decision.
I'm looking at these antennas Mosley TA-53M ,C-3SS and the steppir 2/3 element beams to pair up to a AMP and leaning toward the PW-1. I don't need or really want a full legal amp as long as I can have the right gain with the help of 600-1000 watts.

Steve and John ,thanks for listening guys.

73's DE Jim

true, but steve has had trouble with the autotuner and trouble getting
an accurate schematic and service information, so as long as it doesn't
break you'ld be okay.

> Hi John, I read you review of the THP HL 1.5Kfx , 29 Nov 2006
> If you could expand after the 29 Nov 2006 review, Was this a
> pre-production model? I see some reviews were after the pre-production
> and they had no problems.

most of the thp amps in the eham.net reviews are production as was mine. there are four mosfet finals. i (and at least two others) had failures when the amplifier was used properly - correct band, correct tuned antenna, correct drive levels. in my case i lost one of the four devices. the amp worked otherwise. it just put out about 675 and instead of 925 watts. okay, random failures happen.

amps need protection logic because ops, especially tired contesters, make band mistakes from time to time. i've hit alpha 87a's, al-1500's, al-1200's, tentec centurions (3-500z's), and steve's mackay marine mosfet kw out of band, and nothing adverse has happened. the one time i hit the thp out of band, 3 of the 4 mosfet's bit the dust. others have commented that there is no protection in that amp for such an event. thus the only way to safely use the thp is with automatic bandswitching, which you could do with your rig, to be certain you are always on the correct band. the thp does not autosense the band as do some of the other autoband or autotune amps, it relies on the radio telling it what band you are on. i wasn't using that feature. at that point, i returned the amp for credit (less substantial shipping costs).

i think of the thp 1.5kfx as a "delicate" amp. if you are very careful, you'll probably be very happy. the 1.5 kfx seems to push the device envelope more than the 1.0 and 1.2 models, and i think thoses have held up better. right now i am waiting for the elecraft amps to hit the market - expected in february 2007 to receive fcc approval:

http://www.elecraft .com/news. htm - look down the page a bit.

73, john

3136. New to TARC and amater radio...

Yahoo group: Temple_ARC
Date: 2007-01-02 17:57:27 UTC
From: Alex
Topic: 3136 Message: 3136

Hi Everone,

I joined TARC via the website a few weeks ago and wanted to post a quick note online to say HI and introduce myself to the group. Being licensed for about 5 months (only three of which with a radio), I'm just now starting to learn the scope of this hobby and what's possible. I want to experiment with all of it eventually, but for now I still have the training wheels on and taking things slow.

Getting my license is something I've wanted to do since first hearing of amateur radio from a friend in high school about 14 years ago, and honestly I'm not sure what took me so long. I had the Now You're Talking book for about three years, but not until I attended Field Day 2006 with HOTARC did I really get the bug. I got licensed a couple of months later and bought my first 2m radio (Yaesu FT-1802m) at the Belton HamExpo.

I'm saving my pennies for a power supply and antenna to move the radio indoors, but for now it's mounted in my car where I enjoy listening to all the local repeaters during my commute to and from work. I'm still working up the nerve to jump into conversations, but once I get the radio moved indoors, I think that'll help. It's hard to learn how to use the radio while driving on the highway :)

Outside of ham radios, my hobbies are mostly computer-related. I've been into computers and programming since Middle School, and the hobby has evolved into a career in computers where I do web application programming for Hillcrest Hospital in Waco. I also enjoy working with Linux and Mac OSX. I'm a huge advocate of open source software.

For now though, I'm working on getting a ham nook (hardly large enough to call a 'shack') setup in my garage, then I'll have a place to really start learning. I eventually want to get into packet radio, learn CW, and get my license upgraded soon. I know code isn't required anymore, but I hope to learn CW none the less.

Well I'll close for now. Thanks for your time, and I'll apologize in advance if I ask dumb or elementary questions either in this forum or on the air.

Thanks again ...

Hello, Alex...and welcome to Amateur Radio and the TARC email reflector!

Always feel free to ask questions about anything concerning our hobby. There is no such thing as a dumb or silly question; it's likely that each of us has asked the same questions.

Catch you on the air...

3140. December 29 Tornado Damage Surveys

Yahoo group: Temple_ARC
Date: 2007-01-03 04:58:00 UTC
From: WR1TX
Topic: 3140 Message: 3140

Check out the information from tornado damage during the storms of December 29 at the following:

http://www.srh.noaa.gov/fwd/tornadoes-dec2006.html

These events should serve as a stark reminder that we should ALWAYS be prepared in case of a severe weather event in Central Texas...no matter the season, the month, the time of day, whatever.

Make January 2, 2007 the day you begin to ensure preparedness for severe weather, no matter the form.

Warren Rowe, WR1TX
Temple, Texas

3143. Re: TARC December 29 Tornado Damage Surveys

Yahoo group: Temple_ARC
Date: 2007-01-03 12:37:08 UTC
From: Mike Sherrod
Topic: 3143 Message: 3143

In that case then, wouldn't it make sense for TARC to take a complete inventory of its Emergency equipment (if it has any) and update or purchase the necessary gear to be prepared for such an emergency? As a relative new-comer to this area, I can assure you that you are not dealing with "if" severe weather happens here, it is a question of "when" it happens. I spent 9 years on the Texas Gulf Coast and went through 1 Hurricane and 2 Tropical Storms. The only communications we had was HAM Radios for the entire area of Matagorda County for almost a week! Can we do that?

Just my 2 cents worth...

Mike

Subject: TARC December 29 Tornado Damage Surveys

Check out the information from tornado damage during the storms of December 29 at the following:

http://www.srh.noaa.gov/fwd/tornadoes-dec2006.html

These events should serve as a stark reminder that we should ALWAYS be prepared in case of a severe weather event in Central Texas...no matter the season, the month, the time of day, whatever.

Make January 2, 2007 the day you begin to ensure preparedness for severe weather, no matter the form.

I sincerely believe that this will be an important topic of discussion. Since I won't be able to attend the meeting on Thursday due to work constraints, I would hope that someone else would bring up the subject.

Field Day also applies since this is a test of our equipment in an emergency setting, irregardless of what the ultimate end would be for individual club members...so some thought should be placed on that subject as well.

Any other comments?

3150. Meeting Program tomorrow

Yahoo group: Temple_ARC
Date: 2007-01-04 00:36:46 UTC
From: ke5c
Topic: 3150 Message: 3150

Our invited speaker is 50-50 due to an illness. I am going to check on one other possibility, but it may be too short notice. Our most likely fall back, therefore, is a show and tell. I'll post a final update to this reflector by 1 PM tomorrow, but please be thinking about a 5 minute show and tell you could bring to the club meeting if needed. We had planned a show and tell later during the year, but we might do it twice considering the popularity last year.

73, John

3157. ECHLINK+DSL+2WIRE ROUTERS

Yahoo group: Temple_ARC
Date: 2007-01-05 00:16:54 UTC
From: Glenn
Topic: 3157 Message: 3157

For some ECHO-LINK is a sore subject but for the heck of it I installed the program on my computer since I have DSL now.
Very interesting learning about port forwarding with a gateway.
Embarq provided me with a 2WIRE gateway since my wife and my computers are on each end of our house. I use the wireless side. I was wondering if anyone else had the experience dealing with the ECHOLINK and router configuration.
Echo link setup instructions suggested a UDP port of 5198, 5199 and 5200. I only set up my gateway with 5198 and 5199 ports.5200 port I left closed.
Echolink is working good with the test server.

3161. Spring Ham Radio Classes

Yahoo group: Temple_ARC
Date: 2007-01-05 18:17:24 UTC
From: Charlie Schlieper
Topic: 3161 Message: 3161

The TARC sponsored Ham Radio Classes have been set for starting in mid February-- Tuesday, Feb 13, 2007, at 7PM, meeting again at the club meeting site, the Western Hills Church of Christ fellowship hall. Classes will run for five weeks, on Tuesday and Friday nights, and end March 16, 2007. Note: schedule modification may be applied to the General and Extra Class units, depending on the planning and wishes of those instructors. All classes will be offered but registration will be helpful to us so that we may order all the study guides in advance.

The TARC Ham Radio classes have always been FREE, with the exception that students are expected to purchases their books, which the club will order, at cost.

Hopefully, all the new FCC changes will be in effect by the time our classes end in mid March, that will help facilitate those who take upgrade classes.

Fiesta

Hello Radio Folks,

Some Hams in the area that talk on the 147.260 Repeater/or Simplex/HF are getting together for breakfast(going Dutch) Saturday morning(1-6-2007) at 9:00 AM. Location- Lil Tex Family Restaurant,CC,TX. If you don't talk on the Repeater, come on down anyway. We would love to have you. Come one,come all with family,friends and lets have a monthly get together. Maybe we will meet someone we have not seen. If you know of a ham in the area that is not on this letterhead, get the msg to him/her someway.

73,
Rocky/AC5IO
Cove Repeater Assoc.,Inc.
506 Joe Morse DR
Copperas Cove,TX 76522-3120

Going Dutch is a slang term that means that each person eating at a restaurant or paying admission for entertainment pays for himself or herself, rather than one person paying for everyone. It is also called Dutch date or Dutch treat.

Anyone know any high school seniors or college age hams around here? Forward this to them if so.

==> ARRL SCHOLARSHIP APPLICATION DEADLINE IS FEBRUARY 1

The deadline to apply for academic year 2007-2008 ARRL Foundation scholarships is February 1. ARRL Chief Development Officer Mary Hobart, K1MMH, urges radio amateurs who are college-bound high school seniors or already in college and even older students returning to school to take advantage of this opportunity.

"With the costs of higher education rising every year, I hope that many young hams will apply for an ARRL scholarship," Hobart said. "There's a great deal of interest on the part of individuals, clubs and ham radio organizations to provide financial resources, and many of the scholarships have very open selection criteria."

The ARRL Foundation has added three scholarships to its list of those available: The Zachary Taylor Stevens Scholarship, The Richard W. Bendicksen, N7ZL, Memorial Scholarship and The Gary Wagner, K3OMI, Scholarship. These latest scholarship awards bring the total number of ARRL scholarships to 44. Some of these provide multiple awards.

All information on ARRL Foundation scholarships for young radio amateurs, including application forms and instructions, is only available on the ARRL Foundation Scholarship Programs Web page <http://www.arrl.org/arrlf/scholgen.html>.

Applicants must include high school or college academic transcripts with all scholarship applications. Those applying for the four-year William R. Goldfarb Memorial Scholarship also must include a Free Application for Federal Student Aid (FAFSA). The ARRL Foundation Scholarship Committee will announce 2007-2008 academic year ARRL Foundation scholarship recipients in the spring.

The ARRL Foundation is a not-for-profit IRS 501(c)(3) organization, and contributions to support the future of Amateur Radio are welcome <http://www.arrl.org/arrlf/contribs.html>.

3170. TARC and Scouting

Yahoo group: Temple_ARC
Date: 2007-01-06 20:32:44 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 3170 Message: 3170

The last TARC Meeting involved some discussion about TARC and BSA working together beyond JOTA. Kurt KC5WRJ joined in at coffee this morning and would like to participate as well. Kurt kurt.mccullough@... is not on the TARC reflector and doesn't want to be, but would like to net with other folks about Scouting and Ham Radio.

So, Ed and Martha, John Hobson, Tom Olson and others interested, you may want to include Kurt in your plans.

Also a BIG welcome to Spencer Sholly KC5WQW and Dave N5IT and Terry AB5K joining the TARC Reflector - Welcome and glad to have you aboard.

3171. Pyramid PS-46KX Power Supply For Sale

Yahoo group: Temple_ARC
Date: 2007-01-07 05:48:38 UTC
From: WR1TX
Topic: 3171 Message: 3171

I have a Pyramid PS-46KX 40 amp power supply with issues available for sale to anyone that has more of a knack for fixing these things than I do.

Issues this power supply has:

1) A bulb is out in one of the meters.
2) The cooling fan is kaput; it needs a new one.
3) Needs a new leg (or foot, whatever) to make it sit properly on all four wherever you want to place it in your shack.
4) Just excess to my needs and I don't really have the time to fiddle with the above issues; unfortunately I don't have the schematic, either.

I already own an MFJ 4035MV 40 amp power supply that works very well for me, so I don't need the Pyramid. It's heavy, but it worked properly until the above issues arose. I paid $169 for it brand new, but will be willing to let it go for far less thanks to its problems...just make an offer!

I will not place this on eBay, and I am willing to meet with anyone within Bell County that might want this power supply. Drop me an email if you're interested!

Topic: 3172 Message: 3172

TARC
Just got back from visiting Joe at S&W. He looked great. He described his fall thru the ceiling and his rehab. We chatted a little about TARC and he thanked all the members for thinking about him. He lives in Killeen is getting older and hasn't been making the drive to the club meetings in Temple these last few years.

His daughter and son were also there. She mentioned that Joe had a really nice turnaround on Friday.

He was sincerely moved by the nice card that we all sent. His room number is 7636-02 but will hopefully be moving back to Sante Fe for rehab real soon.

I want to thank you all, you made his day!

From: Carolyn Black
Topic: 3173 Message: 3173

Each of you are invited to attend the TSGARC January dinner/program at the clubhouse this Monday evening, 8 January.
The TSGARC clubhouse is located at 3292 Speegleville Road in Waco, halfway between Highway 6 and Highway 84.
Dinner - 6:00 - 7:00 pm - Homemade beef stew and chicken soup.....compliments of Carolyn and Donna.......the desert will be compliments of Bud.
Program - 7:00 pm Weather....all you ever wanted to know about getting radar images in the field and for you "base station hams," how to send those images. If you don't show, you will never know, so be there and have some fun too. By the way, for you football fans, yes, the game will be available for viewing!!!
See you there.

From: ke5c
Topic: 3175 Message: 3175

Terry, I've looked at several parcels in and around Salado, and there is a tower restriction within Salado proper. Otherwise it's pretty much up to the seller and existing deed restrictions, of which there are a lot. However I found one nice parcel which did not have restrictions but which did have 345 kv power lines on the south side, and while they may not have interefered, I just didn't want to look at them every day. There are a few serious towers here and there, so some land is not restricted. You just have to go on a case by case basis. Happy hunting, 73

John

3189. Today's Surprise Tornado

Yahoo group: Temple_ARC
Date: 2007-01-13 04:01:14 UTC
From: WR1TX
Topic: 3189 Message: 3189

Anyone who follows Central Texas weather regularly got a huge surprise this afternoon when a tornado touched down just north of Temple near Troy. Minor damage was reported west of Troy, and no one was injured at last report.

The parent storm raced north very quickly, and then collapsed and fizzled near Lake Waco. A short life, but it sure woke people up. No one, including myself, would have expected a twister to show itself. But thanks to a picture shown on KWTX-TV there was a classic wall cloud shown, just to the northwest of Troy and between Moody and Eddy.

NWS radar never did indicate the presence of a tornado, and the forecasters at the NWS were certainly surprised when word came that one actually touched down. There were quite a few pictures taken with camera phones and other video, so the proof was certainly there!

This just goes to show that severe weather can happen at any time, and that we must be ready. Make sure to attend any Skywarn classes you can so you can be better educated when a severe storm arises. A major class will be held at Belton on January 27 at Mary Hardin-Baylor; make sure you attend!

Would you let this man check your swr?

Here is Fred's biography from the FCC's announcement:

Fred Campbell most recently served as Chairman Martin's Legal Advisor for wireless issues, and previously served as an Attorney Advisor in the Wireline Competition Bureau. Prior to joining the Commission, Mr. Campbell worked at Harris, Wiltshire & Grannis, where he advised on a broad range of legal issues associated with the provision of domestic and international telecommunications services. Mr. Campbell previously practiced commercial litigation with the law firm of Wolfe Snowden. He also served as an adjunct faculty member at the University of Nebraska College of Law and as a law clerk to the Honorable William M. Connolly of the Nebraska Supreme Court. Prior to beginning his career in the legal profession, Mr. Campbell served in the United States Army. Mr. Campbell earned his B.A. from the University of the State of New York and his J.D., with high distinction, from the University of Nebraska College of Law.

3196. RE: [TARC] New FCC Bureau Chief

Yahoo group: Temple_ARC
Date: 2007-01-15 01:34:17 UTC
From: Glenn
Topic: 3195 Message: 3196

Sounds like a lawyer. Too bad the FCC did make a requirement for some technical knowledge. Maybe a ham ticket.

3209. Annoying Internet Explorer Sounds

Yahoo group: Temple_ARC
Date: 2007-01-18 02:56:00 UTC
From: ke5c
Topic: 3209 Message: 3209

Every time I click Internet Explorer and a new window opens, I get an annoying audible click. This really became apparent when I set the reflector home page: http://groups.yahoo.com/group/Temple_ARC/ to pop up a new set of TARC pictures every 10 seconds. Each time the pictures changed I got that click. I've been annoyed when going through forums on different topics with the same click-click-click annoyance, so I searched and found out how (on a Yahoo information page) to kill that click, and here it is:

1. From the ?Start? pop-up menu on your desktop, select your computer?s ?Control Panel.?
2. From this list, pick ?Sounds and Audio Devices? (for Windows XP) or ?Sounds and Multimedia Properties? (for Windows 2000). A dialog window opens.
3. From the tabs across the top, pick ?Sounds.?
4. Scroll down and you?ll find a category called ?Windows Explorer.? The last item under this heading is ?Start Navigation.? Click this to highlight it.
5. In the box just below this, called ?Sounds,? open the pop-up menu and scroll to the top to choose (None).
6. Click the ?OK? button to close the dialog window.

ARLB004 Codeless Amateur Radio testing tentatively begins February 23

ZCZC AG04
QST de W1AW
ARRL Bulletin 4 ARLB004
>From ARRL Headquarters
Newington CT January 19, 2007
To all radio amateurs

SB QST ARL ARLB004
ARLB004 Codeless Amateur Radio testing tentatively begins February 23

The ARRL has learned that the FCC's Report and Order (R&O) in the ''Morse code proceeding,'' WT Docket 05-235, http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-06-178A1.pdf, is scheduled to appear in the Federal Register Wednesday, January 24. Assuming that occurs, the new Part 97 rules deleting any Morse code examination requirement for Amateur Radio license applicants would go into effect Friday, February 23, 2007. The League cautions that this date is tentative, pending official confirmation and publication.

''This change eliminates an unnecessary regulatory burden that may discourage current Amateur Radio operators from advancing their skills and participating more fully in the benefits of Amateur Radio,'' the FCC remarked in the Morse code R&O.

Publication of the R&O in the Federal Register starts a 30-day countdown for the new rules to go on the books. Rules and regulations that appear in the Federal Register constitute their official version.

Deletion of the Morse requirement is a landmark in Amateur Radio history. Until 1991, when a code examination was dropped from the requirements to obtain a Technician ticket, all prospective radio amateurs had to pass a Morse test.

On or after the effective date of the new rules, an applicant holding a valid Certificate of Successful Completion of Examination (CSCE) for a higher license class will be able to redeem it for an upgrade. For example, a Technician licensee holding a valid CSCE for Element 3 (General) could apply at a VEC exam session, pay the application fee -- which most VECs charge -- and receive an instant upgrade. A CSCE is good only for 365 days from the date of issuance.

The new rules also mean that all Technician licensees, whether or not they've passed a Morse code examination, will gain HF privileges identical to those of current Novice and Tech Plus (or Technician with Element 1 credit) licensees without having to apply for an upgrade. Novices and Technicians with Element 1 credit have CW privileges on 80, 40, 15 meters and CW, RTTY, data and SSB privileges on 10 meters.

The FCC R&O includes an Order on Reconsideration in WT Docket 04-140 -- the so-called ''omnibus'' proceeding. It will modify the Amateur Service rules in response to ARRL's request to accommodate automatically controlled narrowband digital stations on 80 meters in the wake of other rule changes that were effective last December 15. The Commission designated 3585 to 3600 kHz for such operations, although that segment will remain available for CW, RTTY and data.

The ARRL has posted all relevant information on these important Part 97 rule revisions on its ''FCC's Morse Code Report and Order WT Docket 05-235'' Web page, www.arrl.org/fcc/morse/.

Steve
Thanks for putting this update on the TARC Reflector.

As you know, TARC is now gearing up for the Spring License Classes. Though in the past these classes have been mostly for the benefit of the new hams out there, we are also encouraging those Novice and Techs out there to think hard about upgrading to the General Class. It sure would give you more operating privileges on the HF bands and you might even learn something about the hobby that you didn't know before!

Classes will be held on Tuesday and Friday nights from 7pm till 9pm and will start on Tuesday February 13. Charlie N5TD, Darwin K5DOA and Roy N5HQR will be teaching. Once we see who is interested in upgrading to General, Extra or learning the code, we will work out the class times and days.

You will hear more of this, but if you have any questions, feel free to contact Charlie, Darwin, Roy or Tom and they can give you more information.

Thanks
Tom kc5kxs

...The new rules also mean that all Technician licensees, whether or not they've passed a Morse code examination, will gain HF privileges identical to those of current Novice and Tech Plus or Technician with Element 1 credit) licensees without having to apply for an upgrade. Novices and Technicians with Element 1 credit have CW privileges on 80, 40, 15 meters and CW, RTTY, data and SSB privileges on 10 meters...

Steve
Thanks for putting this update on the TARC Reflector.

As you know, TARC is now gearing up for the Spring License Classes. Though in the past these classes have been mostly for the benefit of the new hams out there, we are also encouraging those Novice and Techs out there to think hard about upgrading to the General Class. It sure would give you more operating privileges on the HF bands and you might even learn something about the hobby that you didn't know before!

Classes will be held on Tuesday and Friday nights from 7pm till 9pm and will start on Tuesday February 13. Charlie N5TD, Darwin K5DOA and Roy N5HQR will be teaching. Once we see who is interested in upgrading to General, Extra or learning the code, we will work out the class times and days.

You will hear more of this, but if you have any questions, feel free to contact Charlie, Darwin, Roy or Tom and they can give you more information.

Thanks
Tom kc5kxs

3224. TARC Spring Tech and License Upgrade Classes

Yahoo group: Temple_ARC
Date: 2007-01-21 17:40:27 UTC
From: Tom Olsen
Topic: 3224 Message: 3224

.....I would be intrested in possibly upgrading from general to extra. If we have a class for that let me know.

Hal N5JLL.....

Hal
I started a new thread on this. Both Darwin and Charlie at the last meeting said they will accomodate all upgrades and even throw some code in there for free!

The final logistics will be worked out once they get a final count.

I don't know when I will find the time, but like you, I'm gonna go for the Extra this time around.

Good Luck

3225. Ham Radio Classes

Yahoo group: Temple_ARC
Date: 2007-01-22 01:23:23 UTC
From: k5doa@vvm.com
Topic: 3225 Message: 3225

==========

Beginning February 13 TARC will be teaching a series of classes for amateur radio licenses. All levels of classes will be available. With the forthcoming changes in the FCC rules on Feb. 23rd that will end the requirement for morse code tests for all license classes, it is an excellent time to upgrade.

Classes will be taught at the Western Hills Church of Christ located at the northwest corner of the intersection of US 53 and IH 35 in Temple.

The technician class will be taught by Charlie Schlieper and will be comprised of 10 sessions of two hours each taught on Tuesday and Friday evenings beginning Tuesday February 13. The sessions will begin at 7 PM.

The only name I have thus far for the technician class is:

Thelma Reynolds.

However, we usually get most of our technician candidates from the Skywarn class which will be held on January 27 in Belton. So I expect a good turnout for this class.

Roy Wells will be teaching the General Class. It will consist of 5 two hour sessions held either on consecutive Tuesdays or consecutive Fridays beginning the week of February 13. We need feedback from both the prospective members of the General Class and Extra Classes in order to determine which class will be on Tuesday and which will be on Friday.

The names I currently have for the general class are:

Kenneth Farris
Don Perry
Oscar Houser
Kenneth Baker
Richard Prewitt
Eddie Huntsman
Bill Blowers

Roy has indicated a desire to start the class at 6:30 but can accomodate a 7 PM start time if needed. In you response requested below, let us know if starting at 6:30 would be a hardship.

I (Darwin Geiselbrecht) will be teaching the Extra Class. It also will consist of 5 two hour sessions held either on consecutive Tuesdays or Fridays beginning the week of February 13.

The names I currently have for the extra class are:

Shen Thornton
Myron Mesecke
John Hobson
Larry Fuhs
Hal Pagel

We need to hear from the folks above and any others interesting in joining the classes. For the general and extra class, let us know if you have issues with meeting either a Tuesday or Friday class schedule. For the general class, please indicate if you could start at 6:30.

Please also indicate if you will be needing a book. We can do a combined order if I get the information back soon. The list price for the books from ARRL are:

Technician $24.95
General $19.95
Extra $24.95

The club usually gets a discount of a few dollars below list. We will sell the books at the club's cost.

The ARRL is indicating that they are experiencing delays in filling orders, so if you will need a book please reply ASAP.

My understanding is that we will have a special VEC session at the church following the class to allow everyone in the classes to take their tests.

I would appreciate a reply from all those shown above as well as anyone else interested in signing up for the classes.

What I need to know in summary is:

Which class?

Do you have an issue with making either a Tuesday or Friday night session?

For Roy Wells' class, could you make a 6:30 start time?

Do you want to purchase a book?

Please make your replies directly to me at K5DOA@....

Thanks 73 - Darwin K5DOA

From: Steven Samuel Bosshard (NU5D)
Topic: 3228 Message: 3228
Attachments: 1 described; binary payloads are missing from this source WARC

Several years ago I bought a multiband trapped dipole from Hy-Gain. The antenna has huge aluminum encased traps and uses an aluminum clad steel wire to hold the sections together. This wire is very stiff and very tough. After the recent ice conditions, two of my wire antennas made from #14 copper strand streched to the breaking point. One span was my inverted VEE, 2 lengths of 135 ft with the apex at 120 feet, and the ends tied with black dacron cord. One leg of the VEE broke about 60 feet from the end.

The second antenna was a 1/2 wave 160M vertical. This consists of 2 lengths of 120 feet, with an insulator at the feed point center, and an insulator at each end. The top was at 180 feet, and the bottom as 10 feet, and again I used dacron cord to pull the wire and windowed feed line away from the tower. This antenna broke about 2 feet from the top.

Anyhow, I remembered the really tough wire that Hy-Gain used and found the supplier. Alumoweld on the net. http://www.alumoweld.com Maybe this will help someone with a wire antenna project. #12 wire has 7.8 Ohms per 1000 ft resistance not counting skin effect.

Their prices are very reasonable.

3230. pleased to announce the latest ham in the Central Texas area, Dolores, KE5MBC

Yahoo group: Temple_ARC
Date: 2007-01-23 02:18:26 UTC
From: G
Topic: 3230 Message: 3230

I am very pleased to announce the latest ham in the Central Texas area, Dolores Brennan, KE5MBC (Tech Plus'), wife of Tom Brennan, KD5VIJ, (Extra). Dolores and Tom are both blind and this makes the announcement especially satisfying.

Floyd Bumpus, Gerald Richmond, Tom Vanderveer and I went to their house in Temple last Tuesday and conducted the tests. Dolores wanted to pass the code test before it went away for the satisfaction of doing so. She missed 'General' by one question after only two days study. I had encouraged her to give it a shot since she had been a 'General' many years before.

Gerald and I also had the privilege of testing Frank Fuentes, KE5IHJ, also visually impaired about a year ago at the last Ham Expo test session. It is amazing to give the tests to these people. They have to overcome very significant barriers in order to widen their world. I am so very glad to be able to assist them in this manner.

Gerald, Tom and I also visited the first meeting of the new hams in Milam County, a well attended and spirited session. Our purpose was to give them an insight into the amateur radio world and what equipment to consider. We have added about ten new hams in that area. The lead-off speaker was the game warden for Milam County, Michael Mitchell, KE5LVH, one of the new hams.
He was fresh off of a search and recovery mission for the lady that was washed away at a low water crossing last week.

Stay tuned, we will be announcing new test sessions as soon as the FCC makes up its mind about the date.

I hope to see you all at a SKYWARN session.

Joe Dorn, W5VEX

Gerald Richmond, N5ZXJ

Steve,

Although I am new to TARC, some of the very people you have mentioned (including Steve Bosshard-NU5D) have been very instrumental in not only helping me get set up with my HAM station here in Temple initially but continue to help me each and every time I send up an SOS flare. The club is truly blessed by all the dedicated HAM Professionals (as I like to refer to them) in our area. AS long as I can get such great assistance, I will continue to do the same with the new HAMS that I meet. I will give where I can and pass on this great legacy that TARC has created and given to me.

Thanks again, Steve, for your comments and for all of your assistance and advice.

Subject: [TARC] Thank YOU !!!!

Maybe its time to say Thank You to some of the folks who laid the ground work for our present club. Over 20 years ago Kay and Charlie Schlieper, Walter and Sandy Neaves, Vern Starnes James and Alma Lang, Ray Eary, Brad Hyde, Fred Wadford, and countless other hams began volunteering their time and talents to serve as Volunteer Examiners. These are just a few names that come to mind, and I know there are many, many more. There were also other prior VE's like Harold Adams K5GYL, who administered tests for Conditional Licensees, and Vance Willis, KB5EB (former WB5LDU) who administered my Novice Exam before the FCC got out of the testing business. I will never forget going to TSTC one night with Tony, WB5TTY and serving with Johnny Lewis W5KKD as a VE for a session they were having in Waco. There was some doubt whether to old Jeep Cherokee would make it back to Temple.

Also, How about a big round of applause for again Charlie and Kay (I hate to keep mentioning his name, but he and Kay were the spark plugs making things happen), Roy, Darwin John, and Floyd who have been working dilligently for DECADES teaching ham classes and bringing new folks into the hobby. And may I mention, CONTINUE to do so.

I remember taking classes offered by Charlie (right after he traded W5WDV ??? not sure - been too many years - for N5TD) at TC. Seems like Mr. Wells was in the room as well. This was when KT5R (then WD5VZL) and Duane N5HD, and our missing friend Randy Lott were very active hams here in Temple.

I was there with Dee, and Ray Eary and Walter and Sandy and Brad when Dee took and passed her 13 WPM using a typewriter, This was at the Church of Christ on Ave R (Thanks to Frankie Baugh) where I passed the code and written to go from Tech to Extra at one sitting. (I was hoping for General, but got lucky - the Advanced written was by far the most difficult

test). It sure was cold in there that January or Feb morning in 1985. If I remember correctly, Dee (then KA5STH) went on to serve TARC as Club Secretary with Jill Nesbit KB5HW for several years.

When TARC conducted area WX Nets you could always count on WB5EKU, Lloyd at the Grove checking in, and Don, W5JEH manning the TARC station at Temple Central Fire Station, and always Bill W5ARO and Alan W5UPO keeping the repeater going with Tommy Dugger W5EAX helping them along with Roy Crawford W5VDQ.

I am very sure that I have failed to mention many, many others who really worked hard to support both TARC and the local ham community, and for this, please accept my apologies, Anyhow maybe it's a good time to remember and say Thank You to some of the folks who pioneered Ham Radio in the area. It also would not be right to close without remembering Merrill Eidson W5AMK, John Bloomer W5BEQ, Roy Heartfield W5LJZ, Vern W5WDW and Jess Coleman W5LM and their contemporaries who were there at the beginning.

Very 73,

Steve

That's a shame. Frank was quite a fixture on .82 back in the day when people actually used to get on late at night and ragchew. He will be missed.

From: N5ZXJ aka TowerMonkey
Topic: 3249 Message: 3249

Update:

No services are planned for Frank Couillard, 45, N2HNU of Belton.

Julie - KB5SXQ, and Jaymie - KE5JJS, have asked that memorials be directed to the American Heart Association.

Frank was a member of TARC for many years. He served as TARC's first Webmaster and as a Membership Chairman for several years also.
He served in the U.S. Army and worked as an aircraft mechanic and inspector.

73's Frank, and God Bless.

Gerald, N5ZXJ

It is with unfortunate news that I pass along that

FRANK COUILLARD, N2HNU passed at home 26 Jan 2007.

When further information comes available, I will pass it along.

73's Frank, God Bless My Friend!

From: mlefan@sbcglobal.net
Topic: 3250 Message: 3250

Frank Couillard N2HNU was the first TARC Webmaster, good at writing HTML (this was before FrontPage etc.). He served as club vice president one year when I was president. He and I had many long conversations, subjects ranging from the trivial to the personally serious. If you knew Frank, then you understand why I say that I had to put him in a strait jacket once or twice -- for his own good and for the safety of the club at large! Not to have been a Marine, Frank was surely gung ho. And he was a loyal friend when he was your friend. As a daughter with a stay-at-home dad, Jaymie will miss Frank. He and Julie weathered some tough times together and did themselves proud. I'm glad I had the opportunity to know him.

One more time, 73 to you Frank -- de Mike WA5EQQ

From: Tom Blackwell
Topic: 3258 Message: 3258

I have received information on the Thursday meeting at a time when my calendar was already full.

I'll be available to speak at one of your future meetings on the subject of Spectrum Protection, BPL, upcoming challenges in the Texas Legislature, and other topics. I'm always available to respond to inquiries and requests, from the club leadership and individual ARRL members.

For those who are not ARRL members - I enclurage you to join us.

By now, ARRL members have received ballots in the election, and most have returned them. I do offer information on the election here: http://www.n5gar.info/

I have additional updates on the BPL issue here: http://www.n5gar.com/bpl.htm

I write the ARRL North Texas web page, which includes information on challenges before us at the Texas Legislature, here: http://www.arrl.net/sections/NTX.html

Regards, TOM BLACKWELL, PO Box 25403, Dallas, Texas 75225

From: James Kennedy
Topic: 3260 Message: 3261

(this was taken from the ARRL)
"Field Day is the main event in which hams all over the country set up simulated emergency stations in public areas. Using only emergency power (generator, battery, solar or similar options) they make contact with other stations all over the country and the world using a multitude of radio modes."

it's a fun time to meet hams in your local area and learn new things, also if you have never had any forms of contest before, it's a easy one to get your feet wet on one with.

hope this help

http://www.tarc.org/gallery/view_album.php?set_albumName=fd2005

You'll get a lot of different answers, but Field Day is the convergence of all aspects of our hobby on one day - operating, setting up a communications capability were none existed, visiting and socializing with other club members (and families), a public relations demonstration, a recruiting effort for new hams and I'm sure I'm leaving several things out.

According to the current ARRL marketing strategy: "Field Day is the climax of the week long Amateur Radio Week sponsored by the ARRL, the national association for Amateur Radio. Using only generators, batteries or solar power, the hams construct emergency stations in parks, shopping malls and back yards to test their skills under all situations. The slogan, 'Ham radio works when other systems don't!' is more than just words to the hams as they prove they can send messages in many forms without the use of phone systems, internet or any other infrastructure that can be compromised in a crisis. More than 30,000 amateur radio operators across the country participated in last year's event."

Clubs, individuals, and ad hoc groups compete over 24 hours and are awarded points for contacts and bonuses. The bonus activities include operating using portable power or batteries, public relations, traffic handling, having local government officials visit and several others. The real meat of Field Day to me is the technical side of doing all this and the fraternalization with other club members. Oh, and we usually have a terrific BBQ supper.

What others did:

3265. License Class Schedule

Yahoo group: Temple_ARC
Date: 2007-02-03 15:12:39 UTC
From: k5doa@vvm.com
Topic: 3265 Message: 3265

For those who were unable to make the meeting, the license class schedule is:

Technician Class - Beginning on Tuesday Feb 13 at 7 PM, Tuesday and Friday nights for 10 sessions.

General Class - Beginning on Tuesday Feb 13 at 6:30 PM, Tuesday nights for 5 sessions.

Extra Class - Beginning on Friday Feb 16 at 7 PM, Friday nights for 5 sessions.

All sessions will be 2 hours in length.

Looks like we will have an excellent turnout with 8 in the extra class, 16 in the general class, and about 25 to 30 in the technician class.

The books are on order. I had to make a second order after seeing the additional numbers at the Thursday meeting, so there is a slight possibility that the second group won't be in by Feb 13. ARRL says they will make it. But, if not, we will improvise and share for a session or two.

I will send the list of names after I have had a chance to make some confirming calls this weekend to the folks that signed up at Skywarn.

Thanks for the excellent turnout. It is a great time to become a ham or upgrade. 73 - Darwin K5DOA

Subject: It's Airshow Time !!!

Calling all volunteers!

It's that time of year again! Our first Central Texas Airshow 2007 Volunteer meeting will be Sunday, February 11th at 2:00 at the Temple airport. We've got another spectacular 3-day show planned for this year and you know we can't do it without you!

Agenda:

Plans for this year
Scheduling future volunteer meetings
Description of Volunteer opportunities

Be sure to pass the word to anyone you know that would like to volunteer. If you have any questions - just let me know!

Hope to see you there...

-gary

3273. Bill SB 154

Yahoo group: Temple_ARC
Date: 2007-02-06 20:03:38 UTC
From: Sam
Topic: 3273 Message: 3273

Hi Everyone,

I hope this isn't something that's been addressed already or the wrong forum for such a topic. I was reading through some ham news and ran across a new bill introduced to Texas Legislation by Jeff Wentworth in December 2006. The bill talks about banning any wireless communications device while driving, but unlike other states that specifically exclude radio service, this bill doesn't do that. If taken verbatim it could technically cause mobile radio operators to get ticketed just as cell phone users would.

I'm afraid if this law goes into affect without specifically excluding the radio service, then there will be quite abit of confusion causing radio operators to get ticketed just as cellphone users. NY has a similar law, and even though it specifically defines a Mobile Phone as being something connected to a public switch, there have been hams ticketed under their law - http://www.eham.net/articles/12676.

Anyway, just something to note and watch. I'm planning on writing Edwards, Averitt, and Anderson with my concerns about this, but I wanted to see if anyone else was aware of this bill or had other info on it. Also am I reading too deep into it?

The main page for the bill is here:
http://www.capitol.state.tx.us/BillLookup/Text.aspx?LegSess=80R&Bill=SB154
and here's the wording of it:
http://www.capitol.state.tx.us/tlodocs/80R/billtext/html/SB00154I.htm

Just thought I'd pass this along to the group. Take care and 73's...

Topic: 3274 Message: 3274

Now Internationally Acclaimed, www.3819khz.net streaming audio. Bob, K5AHT and Bill, K5WGA operate a TenTec Pegasus receiver in Richardson using a 160M skyloop antenna at 25 ft. The receiver is frequency agile and follows different nets during the day. The schedule is posted on the website. People using Mozilla Firefox for a browser need to download active x. This is a nice tool for testing your antenna and signal quality into the DFW area. Stuck in an office at work and want to listen to a little ham radio - antennas on the ground - don't have an HF station - Trying to test your rig - this is a neat way to go.

Steve NU5D

(now back to your regularly scheduled programming).

From: Jim Miller WB5OXQ
Topic: 3277 Message: 3280

I spoke with State representative Doc Anderson by phone today and we talked about this senate bill. He says it has not made it to the house chamber yet and is in doubt that it will ever get out of the senate.
I explained the downfalls of a bill like this that is not well defined and does not include FCC licensed 2 way radios but possable could include cellphones.
He said he belives more wrecks were caused by unrully children distracting the driver, changed tapes or cds in the car radio etc than would be caused by use of a 2 way radio. He will watch carefully for this bill to see if it makes it to the house and if it does he will get involved in the discussion. Doc is a good friend and has doctored many of our pets over the last 20 years. If there is any movement of this bill HE WILL CALL ME!

Topic: 3285 Message: 3285

It seems that-- instead of the 1st Sunday of April, when we would normally change to daylight saving time, it will change on the 2nd Sunday of March, 2007. Most of the existing 2007 calendars will not have this change printed on them. (They also make a point that there is no "s" at the end of "Saving" in referencing the time.) Isn't that a little bit like 73 and 73's? (Please don't flame me!) I didn't make this stuff up...

Subject: [TARC] Daylight Savings Time Changes

New rules concerning implementation of Daylight Savings Time may affect computers interactions with Net Clocks, etc. I work with a computer that feeds group and unit ID information to a logging recorder computer. They have to be in sync or the calls don't get correct unit ID information. I have not seen anything buzzing on the reflectors yet, so here it goes.

Topic: 3289 Message: 3289

Just got my alumoweld antenna wire in yesterday afternoon - 10 hanks of 250 ft per hank for about $260 delivered to my doorstep. I restored my 160 M sloper that came down during tree trimming and also my 75 M VEE where the copper wire broke, so I am able to get on most hf bands from home now - The Gap Titan DX still has a bad 75M capacitor - maybe next good wx spell.

The wire is a little difficult to work with - very stiff. Very lightweight compared to copper and breaking strength of over 1000 pounds - ready for the next ice storm.

Do you know who is responsible for acomplishing the following development steps in the history of radio communication? Multiple answers are OK; it doesn't have to be the same person.

1. First to use a complete antenna and ground system

2. First experimental transmission of wireless telegraph signals.

3. The first use of kites to carry an antenna aloft.

4. The first use of balloons to raise an antenna wire.

5. First vertical antenna (steel rod mounted on top of a wood tower).

6. Formulation of the idea of 'waves' traveling out from his antenna.

7. The first Patent for wireless telegraphy.

73 DE K5SBU

[P.S. After a few wild guesses are posted I will reveal the truth!]

ARRL DX Contest, CW

Call: KE5C
Operator(s): KE5C
Station: KE5C

Class: SOAB LP
QTH: TX
Operating Time (hrs): 8:24

Summary:
Band QSOs Mults

160: 0 0
80: 30 22
40: 66 37
20: 78 43
15: 32 20
10: 6 3

Total: 212 125 Total Score = 79,500

Club: Central Texas DX and Contest Club

Comments:

I didn't intend to operate but I wanted to see how my friends at V31TP were
doing. I finally ended up working them on 15 through 80, but a strange thing
happened along the way. While looking for them, I thought I might as well
search and pounce the strong Caribbean stations with my 100 watts and small
antennas. That went unusually well, so well that when I heard a few Europeans
on 40 and 80, just for fun, I answered some CQ's only to be surprised by
responses to my answers. This is probably old hat to the contest gray beards,
but I think I finally understand what it means for 40 and 80 to work during the
solar cycle troughs. My overall rate was only 25 per hour, but that was all
S&P. Of course I couldn't hear most the stations N5AW was working from his low
power mountain top 100 miles from here, or N3BB with power and towers 80

miles
away, but still, it was the most fun I've had in this contest from my
small
station. I added an automatic antenna tuner for the doublet, so it was
very
easy to change from 40 to 80 and back, and I actually used the doublet
some on
the high bands too. This was a great operating convenience - not having
to
twist tuner dials.

STATION:

Hygain Explorer-14 triband yagi at 45 feet

Inverted doublet 120 feet end to end, 40 feet at apex, twin-lead fed and
tuned
in shack

The Radio Amateur is

CONSIDERATE...never knowingly operates in such a way as to lessen the pleasure of others.

LOYAL...offers loyalty, encouragement and support to other amateurs, local clubs, and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally.

PROGRESSIVE...with knowledge abreast of science, a well-built and efficient station and operation above reproach.

FRIENDLY...slow and patient operating when requested; friendly advice and counsel to the beginner; kindly assistance, cooperation and consideration for the interests of others. These are the hallmarks of the amateur spirit.

BALANCED...radio is an avocation, never interfering with duties owed to family, job, school or community.

PATRIOTIC...station and skill always ready for service to country and community.

--The original Amateur's Code was written by Paul M. Segal, W9EEA, in 1928.

Date: 2007-02-22 04:51:40 UTC
From: ke5c
Topic: 3301 Message: 3301

This might be of interest to those of you who so kindly donate your time to make HamExpo happen - here are the results of Mike LeFan's HamExpo survey. The items are sorted from most to least important as ranked by the respondents. Not every respondent rated every item. When one respondent obviously submitted more than one survey, only the last submitted was counted. 16 anonymous and 117 identified respondents are included. The comments and suggestions will be reported separately.

ITEM Average Responses
Indoor fleamarket (as a buyer) 3.72 133
Parking lot fleamarket (as a buyer) 3.47 131
Commercial vendors 3.23 132
Bell County Expo Center site / location 3.22 131
Visiting with friends / Friday parking lot socializing 3.05 132
Indoor fleamarket (as a seller) 2.93 120
Parking lot fleamarket (as a seller) 2.78 120
Admission charge ($2.00) 2.50 131
VE testing at HamEXPO 2.20 130
A special interest group meeting 2.14 131

RESPONSE SCALE VALUE
Very Important 4.00
Important 3.00
Mildly Important 2.00
Don't Care 1.00

Just a Reminder---

You are welcome to attend the Temple Amateur Radio Club meeting, Thursday night, March 1, 2007.

A very good HAM RADIO program is scheduled, to be presented by Steve, NU5D, on the subject of working 60-meters.

Meeting begins at 7PM, at the fellowship hall of the Western Hills Church of Christ, Adams and IH-35.

See you there!

Charlie

3313. Temple Texas ARC Demo

Yahoo group: Temple_ARC
Date: 2007-02-28 13:43:02 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 3313 Message: 3313

Howdy Folks,

I have been charged with the task of providing a program for the Temple Texas ARC. The program will be about the 60 Meter Band. We will have a portable station set up with a close to the ground dipole operating with station call W5LM. There will be some hams currently working on their General Class upgrade making their first HF contacts. Please keep an ear to the ground around 7PM, CDT, Thursday Feb. 29th, (01:00Z) and make these folks welcome, We will NOT be on channel 3 due to digital communication there. Most likely channels 1, 4 and 5. 73,

Subject: March Breakfast

Breakfast alert !!! Saturday 3 March 09:00. LIl Tex Restaurant CC,TX

The 147.260 repeater Director/Members and 146.560 simplex guest Breakfast is the 3rd of March(1st Saturday of each month) at Little Tex Restaurant in Copperas Cove 09:00,(Reservations have been made.) We should be in the third room. (Don't get this confused with the 146:560 simplex/sideband breakfast that is the 3 Saturday of the month).

All Hams and there families are invited to attend The CRA and Fm/Sideband club. Come on out and enjoy an hour or so with us. We do Ham talk and many other subjects. Hams are a small and very elite group and this is one way to keep us together other than once in a while on the radio. If you have not been to our recent get together,come on down! We miss you..

We have many new Hams on the HF bands since last Saturday and there will be even more to follow. I want to welcome all of them aboard. The Sky is the limit, in fact we operate off it,Huh?

Cal Humble donated the Cove Repeater Assoc, a very nice 1500 watt gasoline Generator and battery charger about a week or so ago. It will come in very handy and fill a gap in Solar Power. On these long weeks with no sun, if the batteries get weak, now we have a way to charge them and keep us on the air. We do not have any electrical power up on the mountain(small hill) at the repeater site. Rodger Bekkerus done the maintenance and tuned it up and it is ready to operate.
Some of us folks listed below

Active Directors of the CRA
Jack Sims KX5K
Robert Cathey KA5VVK
Joe Robertson KV5L
Rodger Bekkerus KD5FZN

Rocky Davis AC5IO

New members for CRA 2007 are,
Rodger Bekkerus KD5FZN
Spencer,G KB5WQW

I hope I got names and call signs right, if not let me know. What I am thinking don't necessarily show up in the letter
The Tri-City Amateur Radio Club use to support us, but they disbanded a year or so ago and we are striving to survive, please help us keep this Repeater on the air for Copperas Cove and the surrounding area.

Some of you may become interested in becoming a member of the Cove Repeater Association Inc.. We want to keep it on the Air in case of an emergency(we converted it to Solar Power last year). Dues are $20.00 per Calendar year. The more local Hams we have the less expense it is to maintain an up to date Repeater. Just a few are carrying the load right now. We would love to have you. Mail funds to CRA or give to Rocky.

Cove Repeater Association Inc.
506 Joe Morse Drive
Copperas Cove, TX 76522

Thanks to all that have supported the CRA in the last few years.
See you at breakfast Saturday morning
I can't wait till Belton Expo 14 April, I missed the last one.

3321. Severe Weather Awareness Week

Yahoo group: Temple_ARC
Date: 2007-03-01 22:39:32 UTC
From: Warren Rowe
Topic: 3321 Message: 3321

This is from my good friend Larry Eblen, who is the head forecaster
of the NWS Austin/San Antonio forecast office:

All,

Texas will observe Severe Weather Awareness Week beginning this
Sunday.
Our Austin/San Antonio office has created 7 Public Information
This is from my good friend Larry Eblen of the National Weather
Service office in New Braunfels, which covers the Austin/San Antonio
forecast area:

Statements based on the observance and a topic of the day for Sunday
through Friday. We tried to make them concise and to the point,
while
including the most important information. These Public Information
Statements for Texas Severe Weather Awareness Week 2007 are
attached.
I
hope these will be useful.

Something new this year. All of the 13 Texas Warning Coordination
Meteorologists (the me-people) worked together to set up a state-wide
website that features Severe Weather Awareness Week. We owe a great
debt to WCM Brian LaMarre and his staff at NWS Lubbock for planning
and
hosting this site. I think you will find the information on it to be
very informative and useful. The URL is: www.srh.noaa.gov/lub/swaw.

****

Thanks for the word on this, Larry!

3323. TARC Meeting Thank You's All Around

Yahoo group: Temple_ARC
Date: 2007-03-02 13:35:39 UTC
From: Tom Olsen
Topic: 3323 Message: 3323

I want to say a special thanks to Carl KE5ETT for providing the delicious snacks that we all enjoyed last night. Those little sandwiches were pretty tasty. Again thanks to Steve NU5D for an excellent hands on presentation. It's really nice to see a rig at the meeting demonstrating what the program is all about. I got a feeling that will happen again next month when we all learn a little more about digital communications.

A very special thanks also to North Texas Section ManagerTom Blackwell N5GAR for stopping by and saying hello and giving us an update on his adventures in Austin. It is very reassuring to know that our SM is pounding the pavement down there representating our interests and educating the legislature in our behalf. Since TARC is the southern most outpost in the vast North Texas Section, we are especially pleased to have him as our guest.

Its not too early to start thinking about HamExpo. Hopefully we can get a couple of shifts at the door and also provide some additional help for Darwin and Myron. We appreciate everyone who has helped out over the years and want to especially invite some to the "newcomers" to get involved in the fun. It is quite an event! Also any ideas on how you think we might make HamExpo a little better, please let us know.

Thanks Again to all for an informative and fun meeting!
Tom

3331. WWVB Radio Controlled Clocks automatically correct for DST

Yahoo group: Temple_ARC
Date: 2007-03-08 16:25:27 UTC
From: john_ke5c
Topic: 3331 Message: 3331

NIST broadcasts from radio station WWVB are used to synchronize many millions of wall clocks, watches, clock radios, and other timekeeping devices. The NIST radio broadcasts include information on whether or not DST is in effect, so radio controlled clocks will adjust whenever we transition between DST and ST. For more information, see the NIST web page on radio controlled clocks.

http://tf.nist.gov/stations/radioclocks.htm

Starting in 2007, Daylight Saving Time (DST) begins each year at 2:00 a.m. (local time) on the second Sunday in March in most of the United States and its territories. Clocks must be moved ahead one hour when DST goes into effect. DST is not observed in Hawaii, American Samoa, Guam, Puerto Rico, the Virgin Islands and the state of Arizona (with the exception of the Navajo Indian Reservation, which does observe DST).

Standard Time begins each year at 2:00 a.m. (local time) on the first Sunday of November. Move your clocks back one hour at the resumption of Standard Time.

In 2007, DST begins at 2:00 a.m. (local time) on March 11, 2007.

In 2007, DST ends at 2:00 a.m. (local time) on November 4, 2007.

The current Daylight Saving Time rules represent a change from the past. On August 8, 2005, President Bush signed the Energy Policy Act of 2005, which included the changes in Daylight Saving Time described above, effective in 2007. Prior to 2007, DST began at 2:00 a.m. (local time) on the first Sunday in April, and ended at 2:00 a.m. (local time) on the last Sunday in October. The new rules for DST beginning in 2007 mean an extra four or five weeks of DST each year. There will now be a total of 238 days of DST, compared to a total of 210 days of DST in 2006 under the previous rules, and the U. S. will remain on DST for about 65% of the year.

Subject: Kenwood TL 922A for sale

I recently purchased a Kenwood TL922A with all of the Kessler mods in it so I am offering my original Kenwood TL 922A for sale for $850.00 plus shipping. It is very clean and has two fairly new graphite tubes that put out legal power. If anyone is interested, kindly contact me at 972-964-0323 or Bob@ Bellar.com. Will take to Belton in April if someone wants to see it and I still have it then.

3336. 17 Meters DX Activity Today

Yahoo group: Temple_ARC
Date: 2007-03-11 19:00:11 UTC
From: Warren Rowe
Topic: 3336 Message: 3336

I managed to work a few DX stations on 17 meters SSB today. Here's what I worked:

GP0STH in the Guernsey Islands at 1608 UTC on 18.133 - sig. reports 59 both ways! QSL vis G4DIY (I'm gonna get this one).

DK150HZ in Germany (special event station) at 1617 UTC on 18.152. Sig. reports 57 both ways. I haven't found the QSL route yet, but I'll get it soon enough.

EA8YB in the Canary Islands at 1847 UTC on 18.150 - Sig. reports 59 both ways.

Heard IK4UPI from Italy at around 1845 UTC on 18.135; went QRT before I could work him.

Also, I heard an Argentine station (prefix LU) on 10 meters at arouns 28.497 MHz earlier. I tried to work him, but it just wasn't going to happen.

You see, just because you have no (or very few) sunspots doesn't mean you can't work DX!

Warren, WR1TX

3337. Continuing to Monitor 10 Meters

Yahoo group: Temple_ARC
Date: 2007-03-11 19:11:54 UTC
From: Warren Rowe
Topic: 3337 Message: 3337

I am now back on 10 meters, monitoring 28.490 so I don't interfere with the Argentine DX station on 28.497 MHz. Anyone interested?

Warren, WR1TX

3338. DX Addendum (Got the LU!)

Yahoo group: Temple_ARC
Date: 2007-03-11 19:09:28 UTC
From: Warren Rowe
Topic: 3338 Message: 3338

I finally worked the Argentine station I mentioned earlier:

LU7YZ at 1905 on 28.497 MHz(!) with 59 reports both ways. He actually came up enough for me to get him after several more tries.

Of course I must mention the short QSO with Mike, WB5PBS on 28.495 MHz.

You see now, contacts can be had on 10...even locally...even if it seems like the band may be dead.

Try something new and different!

Warren, WR1TX

Amateur Radio activity shut down in Iraq (Mar 13, 2007) -- Iraq Amateur Radio Society (IARS) President Diya Sayah, YI1DZ, has informed ARRL that all Amateur Radio activity in Iraq has been suspended until the security situation there improves. He says the suspension affects both Iraqi citizens as well as any foreigners -- including military personnel and contractors -- who have been on the air from Iraq. The request to halt all ham radio activity and the issuance of licenses in Iraq originated with a letter from the Iraqi Ministry of Defense to Iraqi Prime Minister Nouri al-Maliki as part of a new security plan, Sayah said. He received subsequent confirmation via the Ministry of Higher Education and Scientific Research to shut down ham radio activity, although he allows for a possible misunderstanding on the part of government officials as to the nature and purpose of Amateur Radio.

The one thing that keeps me sane they take away for me. I was operating last night on 40m working a pileup when YI1A?? told me in broken english that the Iraqi government had turned off Ham Radio, I ran down to the internet lab and read the email.

Well one thing that still works is Army Mars, we can still use this service.

thought everyone should know

I'd like to invite those out there who may be interested in the Emergency Communications side of Amateur Radio, to meet for coffee tomorrow morning at the McDonalds (off I35 & Adams) in Temple about 9am. This will be a pretty informal get together, alot of us need to study a little for our license upgrade exam.

Hope to seeya there!
Tom

Unfortunately I will have to be in Nacogdoches for sure tomorrow, Tom. If you don't mind, get me a list of showed up altogether and who showed some serious interest. Maybe we can get the ball rolling with who shows up!

I'll be here late at work today (until 6 pm likely); give me a call if you want to chat a little further about this (ext 4-1094).

Warren, WR1TX

In addition to teaching 10 scouts for their TECHNICIAN License, I registered myself with the Boy Scouts of America in order to mentor them for an additional "RADIO MERIT BADGE." This has required some outside-the-classroom work to complete, but I happy to report that as of Saturday, March 17, 2007, seven out of ten scouts have now completed their radio merit badge.

Congratulations to:
1. Nicholas P. Dossman
2. Robert M. Duffina, Jr.

3350. Ham activity in Iraq shut down

Yahoo group: Temple_ARC
Date: 2007-03-18 23:07:07 UTC
From: Pete Theer WB5RPU
Topic: 3350 Message: 3350

From the ARRL Letter, Vol 26, # 11 dated March 16, 2007:

==>AMATEUR RADIO ACTIVITY SHUT DOWN IN IRAQ

Iraq Amateur Radio Society (IARS) President Diya Sayah, YI1DZ, has informed ARRL that all Amateur Radio activity in Iraq has been suspended until the security situation there improves. The ham radio blackout began this week.

Sayah says the suspension affects both Iraqi citizens as well as any foreigners, including military personnel and contractors -- who have been on the air from Iraq identifying with YI9-prefix call signs. It does not affect the operation of Military Affiliate Radio System (MARS) stations, however, since they operate on military frequencies, not amateur frequencies. The IARS is informing its member to stay off the air, although some Voice over Internet Protocol (VoIP) modes like IRLP and EchoLink still are okay to use, as long as they don't involve transmitting a signal over the air.

The request to halt all ham radio activity and the issuance of licenses in Iraq originated with a letter from the Iraqi Ministry of Defense to Iraqi Prime Minister Nouri al-Maliki as part of the new Baghdad security plan, Sayah said. He received subsequent confirmation via the Ministry of Higher Education and Scientific Research to shut down ham radio activity, although he allows for a possible misunderstanding on the part of government officials as to the nature and purpose of Amateur Radio.

"I'm waiting an answer from the Office of Prime Minister, because I requested a meeting with him through e-mail," Sayah told the League. He said the government expressed concerns over the difficulty of identifying "enemy" as opposed to "friendly" radio traffic, the potential for revealing military movements via radio and eavesdropping.

Sayah said the government also wanted radio amateurs in Iraq to send all ham radio equipment to the IARS until the security situation improved, but he's advising hams in Iraq to hang onto their gear. "Because we had the security plan going, no one can carry his equipment, and all checkpoints belongs to the Ministry of Defense," he said. "Besides, the location of our Society is not safe to keep members' equipment in one place."

Sayah also has reached out to the worldwide Amateur Radio community to use its influence to reverse the Iraqi government policy.

3355. Strange Yahoo Delays...

Yahoo group: Temple_ARC
Date: 2007-03-19 14:37:49 UTC
From: Charlie Schlieper
Topic: 3355 Message: 3355

I know others in our TARC reflector group have already
experienced this, but since Kay and I both have recently
(the last three days) found unusual delays in receiving a
few e-mails. These are messages that posted normally
to their Yahoo reflectors.

The fact that strange intermittent delays cam take place
(occasionally) with YAHOO connected sites is a fact!

Sunday night, Kay and I both received e-mails that were sent
out by others two and three days earlier! We don't know why.
There is NO apparent reason for this, and it doesn't seem to
happen often.

My best advice is -- if you have something very timely to go
out, you might want to consider 'direct multiple addressing'
rather than choosing one of the YAHOO connected reflectors.

73,
Charlie

[moderator comment] This delay can happen both before the moderators see the message and/or after they approve it. The longest delay I recall was 5 days from submission to moderation, then almost another entire day from approval to posting. Personally, delays of several hours are common. The other strategy that reduces the delays is to post your message on the group website: http://groups.yahoo.com/group/Temple_ARC/post rather than submitting it by email.

3357. Anyone For 10 Meters?

Yahoo group: Temple_ARC
Date: 2007-03-20 00:11:06 UTC
From: WR1TX
Topic: 3357 Message: 3357

Just throwing out a thought...

Is there anyone out there that might be interested in getting together on 10 meters in the near future? With the Techs now having voice priviledges on 10 and possibly not having experience on HF, this might be an opportunity for them (and higher class hams) to get on the air and get their feet wet! If anyone is interested, please feel free to contact me and we'll see what we can do!

It can be done from Killeen. I have heard mobiles work from Killeen to Temple and beyond using less output power than yours.

I'm looking at this weekend to do a serious effort at 10 meters and maybe 6, 2 and 440 FM simplex, SSB and CW as well for local propagational testing purposes. I'll post when I know for sure when I'll be on on those bands, but it'll likely be this weekend.

Misconceptions Abound Regarding Tech HF Privileges

NEWINGTON, CT, Mar 19, 2007 [Updated Mar 20, 4:30 PM] -- Some Technician licensees who gained new privileges February 23 remain unaware or uninformed as to what they may and may not do on the HF bands, says ARRL Regulatory Information Specialist Dan Henderson, N1ND. In addition to all Amateur Radio operating privileges above 50 MHz, Technicians who never passed a Morse code test now have CW privileges on certain segments of 80, 40 and 15 meters plus new CW, RTTY, data and SSB privileges on certain segments of 10 meters. And that's it. "Know your privileges," Henderson advises all Amateur Radio licenses. He says some Technicians apparently believe their new HF phone privileges go far beyond what they really have.

"Technicians have no phone privileges on any HF band other than 10 meters, period!" Henderson emphasizes. "That's the bottom line. If you want to operate phone on the other HF bands, you'll have to upgrade to General or Amateur Extra class."

The misconception is certainly out there. I have had to email some Techs recently to let them know that where (and how) they were transmitting went against the new band plans. Fortunately, I got replies from all of them thanking me for the emails reminding them of what they could or could not do.

I can't help but wonder if there wasn't quite enough education about the new Tech subbands.

For those who are interested in Central Texas weather, a new email newsletter will be available to those who request it! And it's free...

"Central Texas Weather Weekly," by yours truly, will discuss Central Texas weather as well as other important weather topics that are important in this day and age. A weekly question will be posted to test your knowledge, and other ideas are in the works.

The "CTWW" will begin publishing this weekend. If anyone is interested in this email newsletter, send your request to wr1tx1@.... I will confirm your subscription as soon as I add it to the newsletter subscription database.

Any questions, just let me know; I'll be happy to address your thoughts!

Warren Rowe, WR1TX

Interesting about the lines. My FT-857 does that some too depending on
the temperature. They look like this:

http://www.qsl.net/n2ffl/vertical_lines__tmv7.htm

If you figure out a repair, please share. Thanks!

I was just on CQ Magazine's website checking the exchange for this weekend's CQ WPX contest and stumbled on a goldmine. A Ham Calculator that does everything, dozens and dozens of calculations!! You can even design an antenna of several types with graphics. Every Ham needs this program and it's free:

Very good article on VSWR, Return Loss, Reflection Coefficient and transmission line loss in general, especially why not to use a long run of lossy cable to an antenna with high swr.

3379. A Personal Note of THANKS

Yahoo group: Temple_ARC
Date: 2007-03-25 16:26:25 UTC
From: Charlie Schlieper
Topic: 3379 Message: 3379

I just wanted to say THANKS to Steve Bosshard, NU5D, for heading up the VE TESTING for our TARC Ham Classes. It made a difference to all of the students, having a convenient opportunity to test at the end of the session. Eighteen people were tested on March 20th.

As a reminder, the second VE TEST SESSION is set for next TUESDAY, MARCH 27, 2007, at 7 PM at the Western Hills Church of Christ site here in Temple. All who need this second session are welcome!

Thanks to Darwin Geiselbrecht, K5DOA, and Roy Wells, N5HQR, who both taught the EXTRA CLASS and GENERAL CLASS, respectively, on a challenging schedule.

It's great when a BUZZARD like me gets a chance to fly with EAGLES!

TNX agn to all of you,

Charlie

I would like to thank Steve Bosshard, Mike Sherrod and Paul Molina for for putting up my tower a while back. I would also like to thank Charlie and Kay Schlipper for helping to put my antenna's up. I now not only have the Alpha Delta dipole that Steve has been kind enough to loan me but an HF beam up but also a 2 meter beam and a 440 yagi that Vern gave to me. They are about 50 feet up on a rotor that Ray Cook was kind enough to sell to me.

3390. ARRL VEC News

Yahoo group: Temple_ARC
Date: 2007-04-03 10:14:53 UTC
From: Steve Bosshard
Topic: 3390 Message: 3390

ARRL VEC still "busy, busy, busy!" (Mar 15, 2007) -- The ARRL Volunteer Examiner Coordinator (VEC) reports business continues to be brisk following the FCC's deletion of Morse code as a ham radio licensing requirement. "Busy, busy, busy!" is how ARRL VEC Manager Maria Somma, AB1FM, described the situation in her department. She says nearly 800 exam sessions are on the schedule for March with another 600 for April, "and it doesn't look like test session activity will be slowing down any time soon," she added. ARRL VEC hosts 450 exam sessions in a typical month. Despite the hectic pace, Somma says personnel have been able to process most test session paperwork promptly. "The majority of our VE teams are returning the sessions in good order and with all the needed forms," she noted. "Thank you!" Even so, processing times are down a bit. Somma advises applicants to allow 15 days from the testing date before checking on application status. To follow up, first use the FCC Universal Licensing System (ULS) "Search Licenses" tab, or check the ARRL Web license search engine. To contact the FCC, call toll-free during business hours 888-225-5322. Applicants who tested at ARRL VEC sessions whose applications have not been granted within 15 days may call ARRL VEC, 860-594-0300.

Yahoo group: Temple_ARC
Date: 2007-04-05 18:48:51 UTC
From: Steve Bosshard
Topic: 3397 Message: 3397

Charlie, N5TD will present a special program on Digital Modes of Radio Communications with a power point presentation and a real hand on get on the air and make contacts station set up.

I personally made a special trip to the Czech Kitchen and brought back a limited supply of Czech pastries for your culinary delight. Supplies are limited. Also soft drinks and coffee.

This will be the last meeting prior to the April 14 Hamfest and also time to authorize the Field Day Chairman $1600 for the purchase of sorely needed supplies for a first rate Field Day operation.

The meeting will kick off around 7PM at the Western Hills Church of Christ at IH 35 and Adams Avenue (across IH 35 from Starbucks). Any and all visitors welcome.

Ya'll Come and have a Good Time,

Steve NU5D

Very good pictures taken by John, KE5C. If you didn't
get a chance to view them, here is the URL again --
http://tinyurl.com/25c54o

I was unaware of some of the damage to trees.

I had "RAKE" snow off of the top of some hedges and shrubs
here to keep the heavy snow accumulations from weighting
them down.

No power outages here, but had my generators ready.

I worked SP9BGS (Hellschreiber Mode) this afternoon, in the
republic of Poland. [20m]

3409. Icom 2100, Ken TM 231 no power output

Yahoo group: Temple_ARC
Date: 2007-04-09 17:16:41 UTC
From: n5oni
Topic: 3409 Message: 3409

Recently my ICOM 2100 2m radio stopped transmitting after it heated up.
Also happened to my Kenwood TM231 sometime ago.
Problem was caused by a cracked SAV17 or SC1091 output module.

To repair remove the cover from the module.
Try to solder the etch back together.
This may be difficult unless you have a very hot iron and a good
magnifier.
Try not to change the etch too much since this is a tuned circuit.

For more information, search the web for cracked SAV17.
See this link (German) for a picture of the opened module.
http://www.dk7in.de/TM733.html.

3411. Do not follow instructions!

Yahoo group: Temple_ARC
Date: 2007-04-11 05:41:02 UTC
From: john_ke5c
Topic: 3411 Message: 3411

Do not follow instructions in bogus "arrl.net user support team" e-mails (Mar 30, 2007) -- The ARRL is alerting members -- and especially users of the ARRL E-Mail Forwarding Service -- about bogus e-mails that claim to be from the "arrl.net user support team." There is no such entity, and the messages do not originate with ARRL but appear to be coming from outside the US. Recipients should not follow the instructions in the e-mail, which reads, "We have received reports that your e-mail account has been used to send a large amount of unsolicited commercial email messages during this week. We suspect that your computer had been infected by a recent virus and now contains a hidden proxy server. We recommend you to follow our instructions in order to keep your computer safe." Following the instructions will have the opposite effect, however, infecting your computer with the MyDoom Trojan worm and making it part of a spamming network. The League urges all members to invest in and use anti-virus software.

3412. Air Show Signup

Yahoo group: Temple_ARC
Date: 2007-04-12 01:54:58 UTC
From: k5doa@vvm.com
Topic: 3412 Message: 3412

The schedule for the air show was pretty well subscribed at the meeting plus a couple of inquiries. I have the following folks on the schedule.

Friday May 4
1 to 4 PM
Eddie Huntsman
OPEN

4 to 7 PM
Darwin Geiselbrecht
Gerald Richmond

Saturday May 5
8 to 10 AM
Oscar Houser
Ken Baker

10 Am to 1 PM
Don Perry
Kenneth Farris

1 to 4 PM
Ed Underwood
Martha Underwood

4 to 7 PM
John Hobson
OPEN

Sunday May 6
8 to 10 AM
Richard Prewitt
Shen Thornton

10AM to 1 PM
Bill Escolante
Ron Thompson

1 to 4 PM
Mike Sherrod
Elizabeth Sherrod

4 to 7 PM
Tom Olsen
Anjanette Mesecke

So I have only two openings, Friday 1 to 4 with Eddie, and Saturday 4 to 7 with John.

The usual disclaimers: We don't really do communications on the ham frequencies at the airshow unless a Skywarn event occurs. Communications is on commercial frequencies used by the show. Our main duties involve checking out and in commercial radios and keeping them charged between uses. But it does get us into the show for free. The volunteer pass is good for all three days.

For all volunteers: John Gantt wants to stress the importance of making the April 29 meeting at 2 PM at the airport if at all possible. The show's emergency plan will be covered. Passes will be distributed at that time. But if you are unable to attend, you can still claim you pass and tee shirt on the day of the show.

So if you want one of the two slots available - reply directly to me at k5doa@... (off the reflector). First come - first serve.

Thanks to all 73 - Darwin K5DOA

TARC HamExpo Volunteers
As most of us know, the club owes a lot of thanks to Darwin K5DOA, Myron N5TFK and of course, Mike LeFan WA5EQQ for the success of Spring 2007 TARC HamExpo. These guys work almost tirelessly to get it all organized for the 1500 hams and vendors that attend this biannual event. When you see them, you may want to say thanks.

Thanks also to all the TARC volunteers who worked the gates, provided the talk-in, the organized the raffel and the worked the tailgators in the parking lot. Through the efforts of all, TARC is able to do such things as donate to ARRL Sprectrum Defense and purchase antennas and gear for this summer's ARRL Field Day. This is a great club who pulls together, and gets the job done!

Thanks also to the successful VE Test Session headed up by Gerald N5ZXJ, Joe W5VEX, Ron W5WRE, Paul N5NIR and many others. They tested over 30 new and upgrade hams on Saturday during HamExpo.

Also congradulations are in order to Little Sara (age 13) who attended Charlie's N5TD's tech class, and made the grade on Saturday morning!

Congrats Sara!

Thanks to all for making this a fun event for all the 1500 statewide, nationwide and now, international wide hams who visit us each Spring.

The Grand Doorprize was won by Jyki Penttinen OH2NZP, a fellow ham from Helsinki Finland!

Steve and the Group,
This is an event Karen and I make every year, if we can. All of my kids have been to it over the years, either because they were too young to refuse, or they were old enough to meet us there. We missed the first one, and made many after that. In 2000, we lost our oldest daughter to cancer, and we "took a little time off". She would drive from Austin to meet us there, and the one at Georgetown. It is a GREAT place and time to put faces with voices, meet old and new friends, and have a good time. Oh, and of course, to get good deals on gear and parts. In case anyone does not know me, I am usually the one standing by the tables, willing to accept the prizes for those who don't claim them :-) I realize there is a lot that goes into this event, twice a year. I am sure the effort has had to grow, because the events are growing. I appreciate all that is done by each one who works with the event, and the staff. By the way, a year ago, Karen finally decided to get her ticket. She missed 3 too many questions, and was about to give up. I told her I had waited too long for her to sit for the exam, and she WAS NOT quitting. She tested again in Cameron in November, and passed. Listening to all of you folks, especially during the wx events is what pushed her to go on, Thanks so much!!
73,
Paul N5XMV

3425. IC-2820 Programming TIPS

Yahoo group: Temple_ARC
Date: 2007-04-18 14:33:58 UTC
From: Charlie Schlieper
Topic: 3425 Message: 3425
Attachments: 1 described; binary payloads are missing from this source WARC

I have programmed many radios via computers, but the new ICOM IC-2820, with the Digital D-Star board installed, gave me a few problems at first.

Here are a few TIPS that may help others:

1. Don't leave External Speakers plugged into the rear jacks while you are trying to PROGRAM this radio from the front DATA jack. It won't work.

2. In trying to read DATA from the RADIO to COMPUTER, or in the "CLONE OUT" mode, the slower default cloning speed kept causing an ERROR near the end of the process. Changing the CLONE speed to FAST in the program cured the problem.

3. If your CS-2820 computer program tells you you're trying to read "ILLEGAL DATA" from your RADIO, it may be simply looking at CHANGES you put into each VFO band. When I put back the default "146.100" and "440.000" in each VFO, it took all the data!

Enjoy Ham Radio!

73,
Charlie, N5TD

3428. The IC-91AD HT

Yahoo group: Temple_ARC
Date: 2007-04-20 14:55:38 UTC
From: Charlie Schlieper
Topic: 3428 Message: 3428
Attachments: 1 described; binary payloads are missing from this source WARC

The IC-91AD VHF/UHF Voice and Digital (D-Star) mode transceiver is an amazing little HT, with many positive (and a few negative) points. It has 850 memory channels just in the A band, and another 450 memories in B band. Now I ask you-- does the average ham need 1300 memories for an HT?

The Digital Voice mode (DV) is easily accessible with only ONE touch on the keyboard to toggle, but several times I got "lost" playing with the 26 different "banks" of memories.

Yesterday, I put this unit through tests with a sound-card interface, and it worked great! Although I don't know many serious digital-mode enthusiasts who would use an HT this way, I wanted to know how it would perform. The input/output levels were perfect, with an IMD of -38 dB without making any adjustments. The picture (not the best quality) was snapped while testing RTTY and PSK modes.

The biggest negative found was that the IC-91AD is NOT a full-duplex dual-band HT. This also means it can't be put into crossband mode, nor work satellites.

The RS-91 Remote Control Software can seem misleading. Most programming and cloning software has been distinctly labeled that way in the past, but RS-91 is both remote control and programming software. The only disadvantage I have noticed is the absence of a print mode to make a handy copy of your programmed frequencies. Most programming software has this feature.

One surprise-- was ordering a new spare Icom BP-217 lithium-ion battery, without asking the cost. I've never paid $100.00 for such a tiny battery before! ($99.95) Yes, they are available for less from alternate sources ($42.95).

The IC-91AD HT transmits close to 5-watts on high power, and several hundred milliwatts on low. Several of us are still testing D-Star digital voice mode, and so far the unit seems to perform well. One noticeable characteristic is if you're close to a receiving end, there is an "ECHO DELAY", similar to working satellites.

Enjoy Ham Radio!
Charlie, N5TD

3429. "D Star" ... in Temple?

Hope to see you guys by Field Day

Charlie Schlieper <n5td.cs@...> wrote:
The IC-91AD VHF/UHF Voice and Digital (D-Star) mode transceiver is an amazing little HT, with many positive (and a few negative) points. It has 850 memory channels just in the A band, and another 450 memories in B band. Now I ask you-- does the average ham need 1300 memories for an HT?

The Digital Voice mode (DV) is easily accessible with only ONE touch on the keyboard to toggle, but several times I got "lost" playing with the 26 different "banks" of memories.

Yesterday, I put this unit through tests with a sound-card interface, and it worked great! Although I don't know many serious digital-mode enthusiasts who would use an HT this way, I wanted to know how it would perform. The input/output levels were perfect, with an IMD of -38 dB without making any adjustments. The picture (not the best quality) was snapped while testing RTTY and PSK modes.

The biggest negative found was that the IC-91AD is NOT a full-duplex dual-band HT. This also means it can't be put into crossband mode, nor work satellites.

The RS-91 Remote Control Software can seem misleading. Most programming and cloning software has been distinctly labeled that way in the past, but RS-91 is both remote control and programming software. The only disadvantage I have noticed is the absence of a print mode to make a handy copy of your programmed frequencies. Most programming software has this feature.

One surprise-- was ordering a new spare Icom BP-217 lithium-ion battery, without asking the cost. I've never paid $100.00 for such a tiny battery before! ($99.95) Yes, they are available for less from alternate sources ($42.95).

The IC-91AD HT transmits close to 5-watts on high power, and several hundred milliwatts on low. Several of us are still testing D-Star digital voice mode, and so far the unit seems to perform well. One noticeable characteristic is if you're close to a receiving end, there is an "ECHO DELAY", similar to working satellites.

Enjoy Ham Radio!
Charlie, N5TD

3432. New IC-208H Mobile Rig

Yahoo group: Temple_ARC
Date: 2007-04-21 18:27:07 UTC
From: Charlie Schlieper
Topic: 3432 Message: 3432

A visually impaired ham friend of mine, Ralph Fuentez, KE5IHJ, recently purchased a new dual-band ICOM IC-208H mobile rig last week at Belton Expo. He later found out this radio won't take a Voice Synthesizer option.

Programming many channels, and using distinctive "markers" every so often-- (NOAA Wx, Draughn Miller Airport, etc.) is still not as good as having a Voice Synthesizer in this situation.

Ralph would like to part with this IC-208H and get another radio that will better serve his needs. He is also checking with the dealer to see if anything can be worked out, but give him a call if you have any interest. for him.) Ralph can be reached at (hm) 778-5260 and (cel) 760-7071.

3433. ARBONET-2 High Altitude Balloon Flight Set for an April 28th Launch

Yahoo group: Temple_ARC
Date: 2007-04-21 18:45:26 UTC
From: ke5c
Topic: 3433 Message: 3433

[From Doug Loughmiller w5bl at sbcglobal dot net]

Members of the ARBONET (Amateur Radio Balloons Over NorthEast Texas) organization are making final preparations for the April 28th launch of ARBONET-2. The second in an on-going series of high altitude balloon flights carrying Amateur Radio, ARBONET-2 is being dedicated to the memory of Kim R. Miles, N9IS SK, a long time contributor to the central Indiana Windtrax Amateur Radio High Altitude Balloon team who passed away March 27th at the age of 51.

ARBONET-2 will be launched from the JD Trissell Airport in Clarksville, TX which is located in the northeast corner of the Lone Star State. Launch time is scheduled for 9:00 AM CDT on Saturday April 28th. Current winds aloft forecasts indicate the ground track of the flight will carry the amateur payloads into the southwest corner of the state of Arkansas. If ARBONET-2 reaches its expected altitude of 96,000 ft, radio amateurs in parts of as many as seven states should be able to monitor the beacons and communicate through the cross band repeater onboard the near space vehicle.

The compliment of payloads aboard ARBONET-2 include:

A plain language homing beacon that will transmit navigation data to the ground on 146.560 MHz in plain English thus allowing anyone with a scanner or 2 meter hand-held in the coverage zone to follow the progress of the flight without the need for additional equipment to process the data.

An APRS beacon operating on 144.390 MHz to report vehicle location data throughout the duration of the flight and to aid in the recovery of the packages following descent.

A 70 cm Up / 2 meter Down Cross band FM repeater (445.800MHz Up 147.560 MHz Down) will support two way communications during the duration of the ARBONET-2 flight.

A 10 meter CW beacon experiment produced by the Richardson Wireless Klub, K5RWK will transmit a 500 milliwatt signal on 28.061 MHZ.

In addition, ARBONET-2 will carry a number of secondary payloads that will perform remote data collection functions for analysis once the payloads are recovered. These payloads include a 4 mega pixel digital camera configured to capture images every 30 seconds through the duration of the flight, a self contained balloon burst video system designed to capture images of the balloon burst event, a three axis accelerometer and other environmental data loggers.

Operators are encouraged to submit reception reports from the ARBONET-2 flight to team members via the ARBONET web site: www.arbonet.net. A special commemorative QSL card will be made available to everyone who submits reception reports to the ARBONET team.

An ARBONET Launch Information HF net will be held on 7.260 MHz (+/- 10 KHz) beginning at 8:30 AM CDT to report the progress of flight preparations and to provide real time coverage of the expected 2 and a half hour flight.

The ARBONET team encourages radio amateurs throughout the flight?s coverage zone to make use of the payloads aboard ARBONET-2.

Additional updates will be posted to the ARBONET web site in the days leading up to the mission. In the event weather conditions cause a postponement of the launch, the next launch attempt is scheduled for the following Saturday, May 5th.

3436. Experimental Digital Repeater

Yahoo group: Temple_ARC
Date: 2007-04-24 19:55:54 UTC
From: Charlie Schlieper
Topic: 3436 Message: 3436

There is a new Experimental DIGITAL REPEATER* on-the-air in Temple, which is now being tested. The frequency is 442.000/447.000 MHz (D-Star digital compatible). Most radios would setup 442.000 + 5 MHz TX OffSet. While analog radios will pass through this repeater, the deviation is not optimized for other than digital voice mode.

*Thanks to Steve, NU5D, for his efforts to help promote new technology use in this area!

73,
Charlie

so is this is basically a full-duplex analog repeater that y'all are using with your new digital radios? or are you demodulating and remodulating a digital signal? what do you do differently with the deviation and why? thanks!

Charlie,

Way to go! Always great to try new technology in our area. Digital is the future in communications and it is great to see Steve (NU5D) working so hard to get it on the air in the Bell County area with the digital repeater. A great addition to HAM radio. Thanks again to Charlie (N5TD) and Steve (NU5D) and all others that promote digital technology in our hobby.

Re: The Experimental Digital Repeater 442.000/447.000 MHz

Comment:> are you demodulating and remodulating a digital signal?

I believe Steve is taking the digital signal directly from a recv
discriminator and feeding it directly to the transmit modulator circuit.
It is a full-duplex repeater system.

Comment:> what do you do differently with the deviation and why?

The digital system requires very low level of deviation for
the 4800 baud signal to work. The way this is accomplished,
it would produce a "low" deviation level when receiving an analog
signal.

(I hope all my answers are correct. I am fairly new in learning
about this new digital D-Star system. I'm sure Steve can explain
more.)

73,
Charlie

BTW, D-Star is not Icom's design. JARL with funding from the
Japanese government put it together and Icom decided to build radios
that worked with it. Here's a summary from ARRL:

http://www.arrl.org/FandES/field/regulations/techchar/D-STAR.pdf

Steve, don't you know your analog repeater for D-Star won't work?
Here's a Technical Trainer from ICOM who says so (no wonder they
couldn't fix your radio in the service department the first time):

"[http://technocrat.net/d/2006/4/5/2084] If you try to talk through
an analog repeater, in digital mode, it will not work. The repeater
must be able to receive a digital carrier and re-broadcast a digital
carrier.

Since a digital carrier is different than an analog carrier, a non-
digital radio can not re-broadcast the digital carrier. It's not just
digital data, it's an actual digital signal. If you try to transmit,
in digital mode, into an analog repeater, all the analog radios on
the repeater will simply hear white noise and a digital radio
listening will hear nothing. The digital radio will see activity on
the signal strength meter, as would be normal when there is analog
activity on the frequency.

Kevin McClinton, W7JRL
Amateur Technical Trainer

ICOM America, Inc."

As I understand it, Icom also builds true digital repeater$ for D-$tar that will cross-band
and interconnect with the Internet.

3450. Air Show meeting for volunteers

Yahoo group: Temple_ARC
Date: 2007-04-26 02:25:47 UTC
From: k5doa@vvm.com
Topic: 3450 Message: 3450

Just a reminder that the final meeting before the air show will be this Sunday April 29 at 2 PM at the airport. It is advisable to make it if you are at all able as the free volunteer passes are distributed then. Also the emergency plan for the show will be covered. Make it if you can. If you can't, you can still pick up your passes at the show. The tee shirts will given to all volunteers at the show.

The "final" list I turned in is shown below. We can switch around times as long as your name is somewhere on the list. It is too late to add additional names to the list. If there are any shuffles that need to be made, please reply directly to me at k5doa@... (off the reflector).

Thanks for the excellent response. We will have fun. 73 - Darwin

One of the most wanted DX "countries" is Scarbrough Reef. Here's
what happened to the last DX Expidition that visited in 1997:

http://www.iijnet.or.jp/JA1BK/BS7H/index.html

Today a new group is "visiting" this country:

http://www.scarboroughreef.com/

They have arrived: "11:00 UTC 28 April 2007 - The team has arrived at
the rocks on the North side just as the sun was setting. At daybreak
they will scout out the operating positions and build the stations."

So far as I know, they will be using the callsign BS7H or a
derivation thereof - this is not clear to me, and they plan to
operate on:

BAND SSB CW RTTY
10 28475 28024 28080
12 24945 24894 nortty
15 21295 21024 21080
17 18145 18074 nortty
20 14185 14024 14080

Steve, K9DX calculated sunrise and sunset for Scarbrough. I
converted the times to CDT from UTC:

SUNRISE SUNSET
CDT CDT
April 29 16:47 5:26
April 30 16:47 5:26
May 1 16:46 5:26
May 2 16:46 5:27
May 3 16:45 5:27
May 4 16:45 5:27
May 5 16:44 5:27
May 6 16:44 5:28
May 7 16:43 5:28

These are the times they will have enhanced "gray line" propagation
possibly but more importantly, these times tell you when they are
likely to be on the high bands vs the low bands. A DX spotting
cluster is the easiest way to see if and when they are one and who is

hearing them. eham.net is a good choice:

http://www.eham.net/DX/

Good luck if you go fishing! 73, john

3458. [Elecraft] Announcing the Elecraft K3 Transceiver

Yahoo group: Temple_ARC
Date: 2007-04-28 16:15:21 UTC
From: ke5c
Topic: 3458 Message: 3458

[Thanks to George, K5TR (ex-WB5VZL) for alerting us to this
announcement.]

Greetings!

This afternoon at the DX Convention in Visalia, CA, we unveiled a new
top-of-the-line transceiver -- the Elecraft K3. This is the culmination
of three years of design, test, and refinement, and we believe the K3
will set a new standard for performance and value in its class. It has
features and performance comparable to present radios ranging from $4000
to $12000.

(We'd like to thank the many surprised convention attendees. What they
all said boils down to something like "Yes!")

A full K3 web page will be set up by Monday, complete with order form
and other details. Meanwhile, please take a look at the temporary page:

http://www.elecraft.com/K3

Among other things, you'll find a very high-resolution front panel photo
(as well as other photos):

http://www.elecraft.com/K3/K3_big_v2.jpg

And the K3 data sheet:

http://www.elecraft.com/K3/K3_Data%20Sheet_rev06.pdf

There's also an order form that could be printed and mailed, but
sometime on Monday the on-line order page will be up and running, which
is the preferred method.

As explained on the order form, you can reserve a K3 now for initial
shipments in July. A 50% deposit is requested if you'd like to secure
one of the first 200 production units (serial numbers 20-220, probably).

Here's a quick summary of the K3's specs:

- K3/100 and K3/10 models (the K3/10 can be upgraded very easily,
internally, to a K3/100)

- Basic K3 price ranges from $1399 to $1989 depending on whether you
start with the
10-watt or 100-watt model, and whether you choose factory assembled or
modular, no-soldering, kit (this is the subject of the next email).

- Desktop/portable size: 4"H x 10"W x 10"D (10 x 25 x 25 cm) --
optimized for both

home and travel use

- All modes (SSB, CW, DATA, AM, FM, plus AM-sync receive, and built-in PSK31/TTY decoder)

- High-dynamic range, down-conversion architecture, plus 32-bit I.F. DSP for software-defined capabilities (and lots of room for future expansion)

- Optional subreceiver with *identical* performance to the main receiver,
including a fully independent front end, its own set of roofing filters, its own DSP, and low-noise synthesizer; binaural or combined receiver audio

- Up to five crystal roofing filters *per receiver*, with bandwidths as narrow as 200 Hz

- Narrow ham-band filtering, plus optional general-coverage receive filters
(can be added to either or both receivers)

- Internal 100-W ATU option with two antenna jacks

- 100 W PA module includes two large fans, circuit breaker, full parameter monitoring

- All signal sources phase-locked to common 49.380 MHz reference oscillator;
1 PPM TCXO option, firmware-correctable to better than 0.5 PPM

- Built-in PSK31, RTTY, and CW decoding and display allows use of digital modes with or *without* a computer; use CW keyer paddle or attached computer for casual, two-way data QSOs

- Advanced noise reduction; auto- and manual notch. Noise blanker included (both
I.F. hardware pulse blanker and DSP noise blanking)

- Easy-to-use DSP shift/width and locut/hicut controls with automatic crystal filter
selection based on selected passband width (in real-time -- no filter calculation delays)

- Dedicated CW/voice message buttons; optional digital voice recorder

- 100 general frequency memories with alphanumeric text labeling, plus 4 scratchpad memories per band

- Full-custom, optimized, segmented LCD with two VFO displays, alphanumeric text, and
dedicated filter passband graphic

- Rich I/O set: stereo speaker outputs, fully isolated soundcard interface, dedicated RS-232
I/O (and optional USB adapter), receive antenna in/out jacks (for patching in RX filters, etc.),
and both front- and rear-panel mic and headphone jacks

- One-click PC firmware download program checks for updates automatically and quickly
updates microcontroller and DSP firmware

If you have any questions on specifications, performance, etc., that are not answered by the data sheet, feel free to email wayne@....

Sales questions should go to Lisa:

sales@...

We'd like to acknowledge the hard work of the following colleagues:

Lyle Johnson, KK7P (DSP, digital I/O, audio I/O, many of the PC boards, and countless critical tasks)
Bob Friess, N6CM (RF deck, ATU, high-performance 1st mixer, noise blanker, other receiver design)
John Grebenkemper, KI6WX (synthesizer, general receiver architecture)
Brian Broggie, W6FVI (manufacturing engineering -- say hi to him at Visalia tomorrow)
Paul Russell (purchasing)
Lisa Jones (who somehow held down the fort during the entire process)

Eric (WA6HHQ), as usual, applied pressure in all the right places to ensure that this would be the best radio we could make: he's Mr. Performance and Features. Wayne (N6KR -- yours truly) was the principle designer, and also got to do all the fun parts (packaging, firmware, and Owner's manual). And that's why he gets to answer your questions :)

We'd also like to express our thanks to our very patient 15-member focus group. Over a period of about a year, they endured a never-ending series of concept drawings, refinements, and feature discussions. They're a distinguished bunch! I'm sure you'll hear from some of them as the K3 is discussed at length.

Finally: thanks to all of you who have generously contributed ideas for a hypothetical K3 during our many on-line "fishing expeditions." You had wonderful input, and I hope we've created the radio you've always wanted.

73,
Wayne, N6KR
Eric, WA6HHQ

3461. [Elecraft] A few words about the Elecraft K3 modular, no-soldering kit

Yahoo group: Temple_ARC
Date: 2007-04-28 16:18:00 UTC
From: ke5c
Topic: 3461 Message: 3461

The K3 is a modern, high-performance radio with many features never seen in this size or price class. Of necessity, about 60% of the components are surface mount (SMD).

In order to ensure consistency in performance at this level of integration, we must 100% test all of these surface-mount components after installation. But such testing is very difficult unless *all* of the components and connectors are present at manufacturing test time. So, we elected to create a modular, no-soldering kit: all of the modules are pre-assembled and pre-tested. By implication, all toroids are pre-wound, too :)

By pre-testing the modules, we can guarantee that any K3 -- whether purchased factory assembled or built as a kit -- will have identical performance.

Modular kit builders will find the K3 very easy to build, yet not without effort: there are over 100 individual pieces of hardware, many modules, sheet metal panels, bezels, knobs, etc. The builder will also perform a number of firmware-assisted alignment steps. The assembly manual will serve as an RF theory tutorial, so that you'll learn a lot about how the radio works. Builders will, we hope, have a deeper understanding of the K3. And they'll save a significant amount of money in the process.

We will continue to offer all of our present traditional kits, and will have new full kits in the future. We hope that first-time builders who tackle the K3 will also try their hand at soldering, building, and experimentation. We hope to offer some SMD-based kits in the future where the builder gets to install all of the parts -- but it probably won't be anything at the level of the K3.

Please send any comments or suggestions regarding the K3 kit philosophy to wayne@... (or n6kr@...).

Of course this is also a potentially lively topic for the reflector. We welcome your views.

73,
Wayne, N6KR
Eric, WA6HHQ

3470. Unusual source of mobile QRN

Yahoo group: Temple_ARC
Date: 2007-05-03 18:45:57 UTC
From: john_ke5c
Topic: 3470 Message: 3470

I've run an FT-857D mobile for three or so years. The past few months I've periodically had a very annoying S9 noise source that sounded a lot like a dimmer switch does - harsh low frequency pulses. I drive a lot on I35, so at first I assumed it was coming from other vehicles on the road. Today I paid more attention and finally realized the noise went away when I pulled the key out of the ignition. Then I noticed the noise reappeared with the engine off but the key in just the accessory position. In the picture below notice the cell phone mobile charger plugged into the cigarette lighter just to the right of the transmission shift lever:

http://www.ke5c.net/mobile/mobile_shack.jpg

I changed cell phones a few months ago and replaced that mobile charger with an after-market charger for my new phone, and that was he source of the doggone noise!

Well I offered to help Jerry, KA5AIE with refreshments for tonight's TARC meeting, and since there were almost no leftovers, I decided to have a repeat of last month's doings.

The 'near' calamity was that the Kolache Kitchen was CLOSED right after lunch.....bad news. I figure they sold out for the day and went home.

Well I made a little jaunt across Oscar road to Zabcikville and found Green's Sausage House well stocked with Kolaches. By special request we are going easy on the prunes. So we have a limited supply of Zabcikville's Best Kolaches and a couple of Banana Nut Bread cakes from the local HEB Grocery Store.

Hope to see ya'll there tonight for Tom Whiteside's presentation concerning conversion of business radios to amateur use (hope I got that right).

CU there,

Steve

3472. Last Minute Air Show Info

Yahoo group: Temple_ARC
Date: 2007-05-04 13:41:14 UTC
From: k5doa@vvm.com
Topic: 3467 Message: 3472

For those on the air show list I previously distributed:

The setup for the air show this year is about the same as last's.

Parking:

As usual, there will be a separate automobile entrance for volunteers. It will be the same as last year, the gate a few hundred yards northeast of the main gate. This means you don't have to wait in the main line.

There will be no separate volunteer parking - which is good. They used to put us out in the boondocks. If you get there when parking is uncontrolled, just part where you want. If parking is controlled, follow the ROTC kids to the proper spot.

Passes:

If you haven't gotten your pass, just go to the main ticket sales gate by the new terminal and tell them you are a volunteer. They will have you on the list and should issue you a green arm band and a chit for a tee shirt. If there is a long line to buy tickets, bypass it and tell them you are a volunteer needing to get in.

Note that the pass is good for all three days and you can get it at anytime, in case you want to see part of the show on the days before you are due to work. You want to fasten it loosely enough that you don't have to shower with it ;<).

Check in:

After gaining entrance, go to the white volunteer tent and check in with Jerry. She will trade your chit for a tee shirt. The volunteer tent is between the old terminal building and the ramp.

Our lodging:

We will be guests of the TSG in their RV again so we should be sheltered from the worst of the weather. It will be parked at the same place between the two terminal buildings. There will only be room for the two volunteers on duty, so if we have a bigger group at any one time, we will need to gather outside the RV.

Radio check in/ check out

We are trying to improve the procedures a bit this year. We had a radio come up missing last year and our documentation was not in a state to indicate who had it. So John has put some brief written instructions in front of the notebook this year. The main precations are to use the

individual radio sheets to track who has each radio and get a name in addition to any functional use (i.e. it OK to put golf cart, but also get John Doe's name).

We are going to be kind of short on spare batteries this time, so it is important to get flat batteries on charge ASAP and make sure that all radios and batteries are on charged or on charge for the overnight period.

Radio Procedures

Our primary role is to handle the check in/check out of the radios. All communications except those related to Skywarn will be on the commercial frequencies used by the show. The TSG is supposed to handle the control point. But we often are called upon to deal with radio related issues or other issues related to John Gantt, the show director. So keep one of the radios on. Our tactical call sign is "Communications". TSG should be "Command Post", but if they fail to answer, intercede and handle the issue. Most will be someone looking for John Gantt.

The code word for a suspicious object or bag is "Christmas Tree". The use of the word "bomb" is not to be used over the air.

It should be a good show. The fireworks tonight are supposed to be really grand. The "Blastards" promise the biggest bangs yet. So you may want to come out for the finale tonight even if you aren't scheduled until later.

I should be there to get the first shift started each day and will be on the last shift Friday and Saturday to wrap up for the overnight hours.

If there are any questions, or you are unable to make your slot at the last minute, please call me on my cell at 254-258-0493.

Thanks for the help and have a great time. 73 - Darwin

I just talked to Justin, KL1RL, in Fairbanks, Alaska, Grid BP64, on 442.000 MHz, via the Houston system. QSO ended at 2309 CDT. This was NOT digital voice mode, but FM. The subtone was 103.5 Hertz. Also talked to N5YB, (a contest club call) with Nathan operating in the Houston area.

I just happened to be monitoring 442.000 MHz both in FM analog as well as Digital Voice mode, and caught this activity.

73,
Charlie

A non-ham friend gave me an old Conar 255 O-Scope today. I took a quick look and got a trace. I did not test it beyond that. Perhaps one of the new TARC hams might be interested. This is a freebee. It'd make them a good audio scope.

I know the thing is ancient, but it's solid state.

Sorry I missed the meeting Thursday night.

3480. Data & Programming Cable Notes

Yahoo group: Temple_ARC
Date: 2007-05-13 19:33:36 UTC
From: Charlie Schlieper
Topic: 3480 Message: 3480

If you have one of the following radios: ICOM -- IC-91A, IC-91AD, IC-2820, IC-2200H, VHF V-82, or UHF U-82, you can easily wire up your own (Serial) DATA/PROGRAMMING cables.

Using a 2-1/2mm Stereo Plug, the shield goes to PIN-5 of a female dB-9 connector, the ring goes to PIN-2, and the tip goes to PIN-3.

Almost any 2-1/2mm stereo plug works on radios such as the IC-91AD, but others which have a recessed data jack like the IC-2820, require a very small round exterior plug to fit properly.

Small 2-1/2mm to 2-1/2mm small diameter stereo cables are available, which work well with radios having recessed data jacks. You simply cut one end off and add a dB-9 female serial connector.

I built and tested two data cables on both the IC-91AD and IC-2820 radios, and they work great!
I included small in-line clamp-on ferrite chokes near the radio ends, just for safety.
Although I didn't try any of my USB to Serial adapters in this project, they should also work fine.

To use these cables for sending/receiving text-data, I believe D-Star boards are required, but these cables will still program radios that are not equipped for digital mode, provided you have the programming software.

If you're used to working with homemade programmers, most of which had some form of RS-232 to TTL conversion, you might be surprised to find it's not required for these radios.

Enjoy Ham Radio!
Charlie, N5TD

Tom Olson, Just in case you decide to run up to the Dayton Hamfest, I have attached the following important guidelines - may be applicable to TARC hamfests as well.

Steve NU5D

Subject: Dayton check list -2007

The revised edition just in time for the Big Event

| 1. Dayton rule book as ammended for 2007 - with
| complete do's and donts while attending the
| hamfest (hamventiuon is copyrighted) and
| specifically noting the penalties for
| transgressing ANY of the regulations.
|
| 2. The complete Ohio State Manual fire
| regulations as ammended for 2007.
|
| 3. Over priced tickets and space rental tags
|
| 4. Parka - with hood and artic mittens
|
| 5. Galoshes or waders depending on the day
| (a suggestion was made last year about
| bringing 33 gal trash bags to use as rain coats
| for the optomists who don't think it will rain.)
|
| 6. Dry socks 4 pair and other bits of apparel
| that may get wet.
|
| 7. Tent or canopy with several hundred pounds of
| lead weights to combat the gentle 45 Knot Dayton
| breeze.
|
| 8. Sleeping accomodations within 75 miles of Hara
| Arena and sleeping pills, eye shade, ear muffs to
| combat the drunken brawl in the next room or
| possibly in the same room.
|
| 9. 14 handie talkies, pagers, cellphones, GPS,
| Video Camera, PDA or Blackberry, and belt large
| enuf to accomodate them all at the same time.
|
| 9(a). Bandolero with spare batteries for all this
| electronic paraphernalia.

|
| 10. Goofy hat with antennas sticking out for at
| least 4 bands extra credit for Beam.
|
| 11. Laminated Dayton Hamfest I.D. badge (I heard
| a rumor that passports may be required)
|
| 12. scrolling electronic sign front and back
| telling anyone and everyone who you are what
| freqs you are monitoring and your email address.
|
| 13. Bail Money
|
| 14. Map of hamfest grounds with all portapotties
| marked in red.
|
| 15. Snow chains - you never can tell in Dayton.
|
| 16. SPF 55 sunscreen - you never can tell when
| your in Dayton.
|
| 17 - Laser transit and 100 ft tape measure to
| align your tables to avoid reprimand from the
| alignment police. Heaven forbid you should creep
| over the painted yellow lines and encroach on the
| footpath-driveway which you can't drive on anyway
| after 8 a.m.
|
| 18 - Despite all this try to have a fun time.
|
| 19. - Remember the motto -
| "He who dies with the most toys...wins!"

3485. LINUX - Fedora (Core 6)

Yahoo group: Temple_ARC
Date: 2007-05-15 22:39:28 UTC
From: Charlie Schlieper
Topic: 3485 Message: 3485

I'm finally on the internet with Fedora (Core 6) Linux.
Wow, what an incredible experience this has been, trying to
learn this new OS.

My LINUX system gave me some real problems, failing to accept
both the sound-card and the ethernet network card (NIC). It took
hours of troubleshooting to solve, but I now have a Linux system
that is operating flawlessly for the first time.

Thanks to Kay, KB5DC, for many of her late night tutorial efforts,
assisting me in troubleshooting my Linux problems, and also to
Dale Duke, AD5QQ, for assisting with some of my stubborn NIC
problems.

For the last few weeks, I've been taking a free LINUX 101 Class,
sponsored by HP. I've also invested in several reference books.
For hams who may be interested, the URL for HP is:
http://www.hp.com/united-states/hho/classes/

73,
Charlie, N5TD

I'm sorry to hear you had so much trouble with Fedora 6. I'm wondering what type of computer you are using. I've installed Fedora 6 without a hitch on three machines - mine, my son's, and the Dell I gave NU5D for his D-star gateway which should be up and running as soon as ICOM decides to ship him the gateway software.

Anyway, my and my son's machine are nearly identical homebrew (components mostly from Fry's in Austin) running the last of the fast AMD 32 bit processors in Asus A7N8X-E mobos. We both have about a Gb of memory, and I have only ATA drives but he has a mix of ATA and SATA drives. We both have Nvidia video cards although different generations. NU5D's is a totally different architecture - an older Pentium Dell with shared video.

Fedora found all of our components, but the Fedora Core does not include Nvidea fast drivers, so I had to install those from the Livna repository. They really sped up the display. I think we both run Creative sound blaster cards, and I didn't check the audio on NU5D's machine since it does not matter. Oh, and I added a $6 US Robotics second ethernet card to NU5D's box, and Fedora found it right away.

You've probably done this too, but I actually have a triple boot machine here with XP and Freedos on the first HD and Fedora and a second NTFS partition for XP on the second hard drive. At first I tried to use Grub as the main bootloader, but then I read an article, and it's much easier to use Gag as the main bootloader and include Grub in the Fedora partition.

Hope to hear all on D-star soon - can't wait for the interconnect.

73, John

A really useful set of configuration tweaks:

http://www.mjmwired.net/resources/mjm-fedora-fc6.html

I used this to install the Nvidia drivers, TrueType fonts, and mount NTFS partitions. The latter is helpful in a dual or multiple O.S. system since it allows you to read/write Windows XP and Freedos partition files from Fedora (Linux in general).

Interesting.

This is one of the areas that I have found most Linux
distros work much better than any Windows install
I have ever done - and I have done many of both now.

The Linux installs seem to always come up with working
networking - but the windows installs send me off
looking for drivers (usually on the internet with
another computer) and then having to figure out
how to copy that data back to the machine that needs it.

Good to see you are up and running.

Congratulations John on your successes with Linux! I wished mine had
been that easy. I probably used the wrong computer to try Linux on.
It was an old discarded "spare" which had belonged to Kay. It has a
Gigabyte GA-71XE motherboard with an AMD 751 chipset, and is
fairly slow at 800-MHz CPU speed. It uses some older styled "heat-
sinked" DIMM memories, about 512Mb.

Thanks for the URL-- that is mentioned below. It has some good
reference information on Fedora, and I book-marked it for future
reference.

I downloaded 262 Linux updates for Fedora Core 6 last night, and
installed them (654.3 Mb total).

Thanks to Michael Hopwood, KE5EUA, who thoughtfully provided
me with CDs and DVDs of Fedora Linux.

Hello to George Freeman III, and tnx for your comments.

Regards,
Charlie, N5TD

I AM LOOKING FOR A CHIP FOR KAM ALL MODE... MABIE CHARLIE
N5TD CAN HELP BUT ANYWAY... I HAVE A 7.0 CHIP BUT NEED ENHANCEMENT
BOARD FOR THAT, OR I NEED A 6.0 CHIP WITH PACTOR..
NEED IT FOR USAFMARS... FOR WINLINK2000 CANT AFFORD A PACTOR
2 OR 3 TNC... BOY ARE THEY EXPENSIVE.
ANY HELP WOULD BE APRRECIATED.. ALSO A COPY OF 6.0 COMMAND
BOOD OR UPGRADE INFO.
HOPE ALL IN TARC ARE WELL WE ARE FINE HERE.. WORKING, PLAYING
RADIO... OF COURSE..MARS ETC. GREAT WEATHER HERE... SOME RAIN AND NOT
TO COLD NOT EXC. HOT.
GOT MY NEW TOYS FOR XMAS... TS2000, MFJ-989D TUNER AND A
RIGBLASTER PRO... NOW IM BROKE...HI HI.

HAVE A GREAT DAY ... EMAIL WHEN YOU CAN.!

3498. fm radio quiz

Yahoo group: Temple_ARC
Date: 2007-05-20 00:00:08 UTC
From: John Dvoracek
Topic: 3498 Message: 3498

well, i don't do much fm, so it's all a learning experience to me. here's a riddle. my son and i were checking out our new ic-91ad d-star ht's. we were sitting about 5 feet from each other and could talk on low or high power simplex without difficulty.

however, when we tried to use the d-star digital repeater (442.000R / 447.000T callsign K5CTX), we couldn't make contact except for a sporadic burst here and there, and low power seemed to work better than high power. we read the setup over and over and seemed to be doing things correctly.

i was sitting in a swivel chair and turned around (with my back to my son) and made a call which went through the repeater. then the brain fade resolved. i immediately sent him downstairs and outside from where we could chat 100% through the repeater on low power but only about 50% on high power.

so would the fm radio techs care to post the answer as to why a pair of hf'ers couldn't figure out what was wrong for so long?

btw, once we get this all figured out, we will post a "Duh-Star for Dummies" webpage -:)

John

There is a word that describes your recent discovery. "DESENSE"
It is ussually not posible to communicate with a nearby radio thru a repeater.
The receiver is overloaded by the other transmiter which is operating on another frequency.
600 khz away for 2 meters and 5 mhz away for 70cm.
For repeaters you transmit on one frequency and receive on another.
Repeaters use a very expensive and large filter (duplexer) to cure this problem.
I think cell phones may have a similar problem.
See:
http://www.about-wireless.com/terms/desense.htm

Correct! The clues were that when going through the repeater low power worked somewhat whereas high power (more frontend overload) didn't at all, and when I turned (putting my body between the radios attenuating the overload), it worked.

With analog radios, we would have heard a somewhat distorted direct transmission (technically 5 mhz off frequency). With these digital radios, one of two things is happening so you hear nothing. The less likely explanation is that the data is distored enough by the overload that the radio can't process enough of it to make sensible audio. However, I think it's more likely that the radio hears (only) the overload packets which bury the packets coming from the repeater. The radio then decodes the overload packets correctly -- those intended for the repeater, not the end user ("UR") but then igores them since the HT is not the repeater for which they are intended. I think this is what is happening because manually unsquelching the HT let us hear the direct transmission clearly. In the digitally unsquelched state, the HT decodes all packets it hears, not just those intended for it - I think. cul

3501. TARC Activity Update

Yahoo group: Temple_ARC
Date: 2007-05-20 19:03:44 UTC
From: Tom Olsen
Topic: 3501 Message: 3501

May is just about behind us now. Want to say thanks to Darwin K5DOA and everyone who helped out at the Centex Airshow. It was a fun event for general public and I think the volunteers also enjoyed the show from the cozy nook of the ?command & control center?!

June, which is also National Amateur Radio Month, is just around the corner! I want to remind everyone that we will be needing 8 to 10 hams with 2m mobile capabilities to help out on June 2nd, with the annual Kiwanis Club?s Tour d?Temple. For more information you can check out the web site at http://www.templekiwanis.org/tour_d'_temple.htm .

This fun bike race will cover various distances up to 50 miles out to Mother Neff State Park and back. We will meet at the Mayborn Center at 7am in the morning to get organized. If you don?t have 2m mobile capabilities, come on out anyway. We?ll match you up with someone who does and get you on the air. This should be a particularly fun event for some of the newer hams in the area.

Want to mention also that TARC will be providing the display at the Temple Public Library during the month of June. The large display area will let us really show the pubic just what Ham Radio is, and show a little of the history of how this fun hobby has been enjoyed over the years by the Temple Amateur Radio Club. There will be special displays focusing on Kids in Ham Radio as well as a general invitation for all to come out and be part of the TARC Field Day. If you have memorabilia or something that you would like to have displayed, please let us know. We need radios, keys or pretty much anything that would help illustrate amateur radio to the general public.

Don?t think I need to, but I want to remind everyone that the ARRL Field Day will be held the weekend of June 24th. What more can you say? The best of all ham worlds, Dxing, EmComm and hanging out with some pretty nice guys (and gals). TARC will again have FD at the Early Day?s Tractor Festival Site Pavilion off Eberhardt Road. The TARC FD group has put a lot of effort into finding just the right equipment that will make FD both fun and competitive for all of us. Every TARC member should stop out, if just for a minute, to say hello, get on the radio or just hang out a little. We will have breakfast in the morning, burgers and dogs during the day and a dinner on Saturday night. We especially encourage the ?old timers? to join us for dinner. For the newer hams and the general public, the GOTA station will be up and going! You will learn a lot, socialize a lot, and eat a lot! Guaranteed!

I just snapped a couple of pix of the Temple, Texas DSTAR Installation. The Gateway is non-functional waiting on software from Icom, but the rest of the stuff is hot and ready. I added an extra 5" 3/4 Wavelength cavity in front of the receiver (beige DB Products can in the last picture). Using a dual band fiberglass ham quality antenna (till I get time to hang another DB420) on a 175 ft Rohn 45 G fed with 1/2" LMR 500. The WP639 is one of the early ones built by Lloyd Alcorn and tuned by John Elliot back around 1985 or so. The extra cavity is to help with overload from a 5 channel 450 Mhz LTR system and a 5 Channel 856 Mhz LTR system on the same tower. The local ISP has a point of presence on this tower with a semi broadband connection back to his demarc - I have a nic installed in his linux switch - kinda like having a friend at the factory, so to speak. In a nutshell, 25 Watt repeater running D-STAR JARL format with a Dell computer for the Gateway, in a 6.25 Khz Channel with room for 2M and 23cm.

3505. Excerpts from a Speech given at the Dayton Hamfest

Yahoo group: Temple_ARC
Date: 2007-05-25 18:59:28 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 3505 Message: 3505
Attachments: 1 described; binary payloads are missing from this source WARC

Excerpts from remarks by:
Riley Hollingsworth, K4ZDH,

Special Counsel, Spectrum Enforcement Division, Enforcement Bureau, FCC.

The blatant rule violators - I think you can see that we are taking care of them, or most of them - on a gradual basis. Current violations are about what we would expect from a service your size. But what concerns me most is this: You still need to ?lighten up.? I said that last year but you need to take it to heart more. All of you can learn from each other. And you need to work together more and show a little more respect for your diverse interests and for the service as a whole. It isn?t about you. It isn?t about enforcement. It?s about Amateur radio. Every time you get on the air, you need to decide what?s most important to you---the best interests of Amateur radio as a whole, or your own pride or ego or ?rights?. I realize I may be preaching to the choir here, but on the air you need to be more cooperative and less argumentative - and I need you to take this message with you when you go home.

In a nutshell, I have good news and bad news. The good news: nothing is wrong with Amateur radio. It is a good service that is showing its value to the public on a daily basis. Bad news is that there is an element of Amateur radio that too often reflects present society generally. Whatever the phenomenon behind Road Rage?whatever that is?that?s what I am talking about. All of you need to work together and depend upon the FCC less to solve your operating problems. We live in a rude, discourteous, profane, hotheaded society that loves its rights, prefers not to hear about its responsibilities, and that spills over in to the Ham bands. You are the only service that has thousands of frequencies and hundreds useable at any given time of day or year---it was designed that way to give you alternatives, to have fail-safe back up plans and to experiment and lead technology. Even the public safety services don?t have thousands of frequencies.
Now some frequencies are like bad neighborhoods. They are being cleaned up but it will take more time and it?s just not something that happens overnight. We will get there.

We can enforce our rules but we can?t enforce kindness and courtesy or common sense. And a very wise person once told me: "You just can?t regulate stupid." If we could, we?d be working for the United Nations instead of the FCC.

To the Nets: Just because you have been on the same frequency for 75 years?that doesn?t mean you own it. All frequencies are shared. If you vary your frequency, or even if you don?t have a net one night, the radio

world isn?t going to end.

To repeater owners: Just because you are coordinated doesn?t mean you own the frequency. Coordination is a recommendation, not a frequency assignment. It?s your call sign on the repeater and it?s your station and your responsibility, just as if you had left the door open to your station at home. If there is abuse, lock the door. Don?t ask us to be baby-sitters or hall monitors of your repeater?that?s what control operators are for. Nobody asked you to start a repeater. If you shut it down tomorrow, what would happen? People would use OTHER repeaters!

To the contesters: be more courteous. You are responsible for the frequency you are operating on and realize that?s true even when you operate split. All frequencies are shared.

To those who don?t like contesters: lighten UP!! Contests are short lived. Use the WARC bands. Wash the car. Cut the grass. Learn from the contesters?and this applies to you Traffic net folks too?learn from the contesters?they pass information a lot faster and more efficiently than you do. Contesters are some of the best radio operators on planet Earth. If the contesters operated at the same pace as some of the emergency traffic nets, the contest would be over after the first few dozen signal strengths were exchanged!

To the widebanders: If you want to be a Broadcaster, apply for a broadcast license. Using extraordinarily wide bandwidth on crowded frequencies at peak operating time is rude and selfish and inconsiderate.

To the QRP?ers: Thank you thank you thank you for your vitality, inspiration, enthusiasm and for being BUILDERS again! I wish I could take your enthusiasm and spread it over all segments of Amateur radio. When I watch you folks, I see the excitement and magic of my first contact.

To those who don?t like QRP?ers: Lighten UP. ANYONE can use a linear amplifier as a crutch.

To the rag chew nets: 4 or 5 people meeting on the same frequency every night for 50 years using 1200 watts to talk a few hundred miles when 100 watts would do just fine is not a net?it?s an informal roundtable. It ain?t going to hurt you either to vary your frequency or skip a night. And the so-called ?net? on 75 that bills itself as an ?Oasis of Amateur Radio?---give us all a break - you are an ordinary roundtable, and no net is an ?Oasis of Amateur radio.?

To those of you who don?t like DXpeditions: Lighten UP! If a group of people want to spend a lot of money to go to a rock or sandbar in the ocean, live in a tent and swat flies and scorpions for a week and talk over Ham radio 24 hours a day, SO WHAT: LET?EM DO IT!!. DXpeditions, too, are short lived, and such operation must be important to SOMEONE.

And to those of you who have been continual problems and we just haven?t gotten to you yet: you now have a problem yourselves. Your renewals are

coming up. YOU have the burden of proof in showing that you should have a license and YOU have to come to Washington to make your case and we are going to have a LOT of questions for you.

And finally, to all of you who will no doubt moan about the code being eliminated, I say this: IF it was such an earthshaking issue, why did less than 1% of you even file comments during the decision making process?? WHY is it important NOW but it wasn?t important THEN? HOW can it be a ?filter?, when the worst enforcement problems we have all passed a 13 or 20 WPM code test?

Thank you again for all the incredible support you give our enforcement program. The self-regulating aspect of your service never ceases to amaze me! I can?t imagine a BETTER group of licensees to work with. I have always had interesting jobs with the Commission and I am one of the few people on earth who like their job. I have always liked working at FCC, but you folks are the BEST and I am so thankful that I have gotten to work FOR you and WITH you and I sincerely thank you for that opportunity, and I sincerely admire you and respect you for all your passion and dedication

Topic: 3508 Message: 3508

Austin SwapNet 05/27/07 de N5MNW, ARO & AARC. Website: www.AustinHams.org

Fleming Flock,

Look for significant changes in this year's Austin Radio RoundUp!
First, the AARC is kicking off funding for the event with a 250-ticket raffle for ICOM's IC-7000 HF-UHF compact allmode! Details are still in the works but we will make a formal announcement soon.
Second, we are moving the event to Dec 7th & 8th, the first Fri-Sat in December, far enough in advance of Christmas and well after Thanksgiving. The AARC Christmas Party will be held at the Hall Friday night so Commercial Vendors can set up and attend the Christmas Party!
Third is a change of Venue. Costs were going up at our previous location and an agreement has been struck with the Sons of Hermann Lodge, just south of Walter E. Long Lake and the Travis Co Expo Center. We need to find carpet remnants or another acceptable way to cover and protect the wooden dance floor from swapfest tables.
There are extra rooms for exams and plenty of parking in the big lot out front.

Repeated- from John Stratton KE5ISX RE SB 11, which specifically names and -favors- Amateur Radio:
We have been requested to have all Hams contact their respective State Representative to request support for SB 11.
We especially need hams (or their friends) who are from house districts of Escobar (D-Kingsville), Herrero (D-Corpus Christi) and Burnam (D-Ft. Worth) to call and urge them to vote for SB 11. These three are the principal opponents in the House, with Burnam, a hard core liberal, the most dangerous. Burnam killed HB 13, the border security bill, on points of order. He will probably try the same maneuver on SB 11.
Please pass the word out to all you know to call or fax their representative requesting support. Stress they should call or fax, because email is ineffective.
John Robert Stratton
Telephone: 512 445-6262

The Austin Amateur Radio Club is committed to email address security and battling SPAM. We will do everything we can to assure mass-email addresses are suppressed (BCC'd) and that published email addresses will be "munged" upon request.

Unfortunately, the SwapNet Newsletter contains SPAM clues, causing certain ISP's automatic filters to take action and delete without recipient's knowledge or permission.
We also are firmly convinced that "Forward to everyone in your address book!" is a bad choice and offenders should be (insert unprintable penance here).

www.AustinHams.org site has a nomination button for "Ham of the Month".
Nominate and describe who -YOU- think ought to be AARC's next HOM.

If you like SwapNet Newsletter, the club repeaters, loaner hardware and other things AARC is up to, please join us and get involved!!

AARC dues can be paid or renewed online. It's now easier than ever to renew and/or join the AARC! www.austinhams.org/join.htm You may print out a .pdf and mail it in or use PayPal and join online.

If you're not an ARRL member, AARC will apply $15 towards your AARC club dues if you sign up for first-time ARRL membership through the club!
Take advantage of dual signup, save money, join ARRL and AARC simultaneously!
Contact Don AC5YK@... or Jerry N5UJ@... for more details.

Please visit Austin Amateur Radio Supply- www.aaradio.com When you drop by the store, tell Johnny, Grace or Barbara you were referred by the AARC/N5MNW SwapNet newsletter.
It might not help, but it couldn't hurt!

The following is generated from a 2m voice "SwapNet" held every Sunday at
9PM on the 146.940 repeater in Austin, TX- an AARC/ARO tradition since 1974!
Newest postings appear near each list end, float up and expire after six weeks.

We'd like for this to primarily be an Amateur Radio Swap List. Items for sale
should be Amateur Radio equipment or directly related. While computers and test
equipment are acceptable, a house or car with Ham gear in it does not "fit the bill"...

It should go w/o saying, but AARC assumes -NO- liability for 3rd party items.
Be sure to ask all pertinent questions before entering into -any- purchase.
Please feel free to copy or forward as you wish, giving proper acks to AARC.

Along with a short description of the item(s), be sure to include your name,
callsign, phone number/email and an asking price.
Actual on-air Net participation is preferred but SwapNet Newsletter updates
can be emailed to: n5mnw@...

3522. June is Amateur Radio Month / Library Display

Yahoo group: Temple_ARC
Date: 2007-06-03 16:10:20 UTC
From: Tom Olsen
Topic: 3522 Message: 3522

Just to let you know, we will be setting up the TARC library display today at 1pm if anyone is interested. If you have anything that you would like to have displayed at the Temple Library as part of the TARC Amateur Radio Month Display, then bring it on!. The shelves are glass and not that wide (12in or so) so boat anchors probably wouldn't cut it. Though there is some room on the floor for the heavier memorabilia of the past.

3523. Tour d Temple Thanks

Yahoo group: Temple_ARC
Date: 2007-06-04 20:15:13 UTC
From: Tom Olsen
Topic: 3523 Message: 3523

Want to say say thanks to all those who helped out with TARC's participation in this years Kiwanis Club Tour d' Temple. I'm glad we were there and after a short post race debriefing, looks like they will be asking TARC to help out a little more, next year. Parts of the race goe all the way to Mother Neff Park and back and that is a lot of territory for something bad to occur. They had two nasty spills, both requiring trips to ER. We were on the scene pretty quick to assist. Otherwise it was a fun event and a great race. It's great to be able to use our communication skills to assist in such a worthwhile community service endeavor. Mike Sherrod WB5PBS was net control and was located at the Maybourne Center. Darwin K5DOA and Vern W5WDW were rovers. Special thanks to new ham David KD5NQK for manning the First Rest Stop. Myron N5TFK, John WD5BFS and Tom AE5AP assisted in fixed locations further down along the route. Ron W5WRE was the furthest station out, at the 100km turnaround point, somewhere way out there near ol' Mother Neff Park. Nobody, even Ron, was sure just where!

Again Thanks to those who were able to help out. We did a great job,
Tom

Just want to make everyone aware that June is Amateur Radio Month in these parts. To help celebrate, TARC volunteered to put up a month long display at the Temple Public Library. Please, when you get a chance, head on over and have a look. There are lots of pictures from the past, lots of pictures from the present and a nice section for the kids, called "Kids' Corner". This is a display that I hope TARC can be very proud and lives up in some small way to its proud tradition. TARC has been an active organization in the Temple area since at least 1935 or thereabouts. That sure is a long time and something to celebrate!

3534. Space Shuttle ISS Audio up and running on N5ZXJ Repeater

Yahoo group: Temple_ARC
Date: 2007-06-08 23:19:35 UTC
From: N5ZXJ aka TowerMonkey
Topic: 3534 Message: 3534

Listen to the Space Shuttle / ISS Audio on N5ZXJ Repeater 145.310

Audio will be carried for the entire mission.

Mission STS-117 is the Space Shuttle Program's 21st mission to the International Space Station. The crew is to deliver the S3/S4 starboard truss segments, batteries and another pair of solar arrays to the space station.

When Atlantis lifts off from Launch Pad 39A, it will be the first launch from that launch pad in over 4 years.

A nice piece of History for this mission....

A small piece of early American history will become the latest space traveler with the liftoff of NASA's space shuttle Atlantis. A nearly 400-year-old metal cargo tag bearing the words "Yames Towne" and some commemorative mementoes are packed in Atlantis' middeck floor cargo space for the roundtrip flight to the International Space Station. Their hitchhike through the galaxy honors this year's 400th anniversary of Jamestown, Va., the first permanent English settlement in North America.

Enjoy,

Gerald N5ZXJ

Here's wishing them a safe return, and a welcome to the Group. Had I known they were here, I would have tried to make contact with them, as I am originally from Shelbyville, Indiana... I might even have told the Boss I needed a sick day, so I could drive to Temple for the coffee meet. Uncle Sam brought me here about 36 years ago. After traveling around for "him", I returned to Indiana to find out just how cold it was there, and how much nicer it was in Texas. After my Dad passed away, I set a course for Texas, and have been here almost 30 years again. This is a very fine group of folks in TARC, and all of you have been helpful over the years, Thanks!!

3541. NASA Video

Yahoo group: Temple_ARC
Date: 2007-06-15 18:14:36 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 3541 Message: 3541
Attachments: 1 described; binary payloads are missing from this source WARC

PALATINE, Ill. (June 15) - An elementary school science teacher in this Chicago suburb doesn't have to turn on the news for an update on NASA's space mission. She just turns on her video baby monitor.

Since Sunday, one of the two channels on Natalie Meilinger's baby monitor has been picking up black-and-white video from inside the space shuttle Atlantis. The other still lets her keep an eye on her baby.

"Whoever has a baby monitor knows what you'll usually see," Meilinger said. "No one would ever expect this."

Live video of the mission is available on NASA's Web site, so it's possible the monitor is picking up a signal from somewhere.

"It's not coming straight from the shuttle," NASA spokeswoman Brandi Dean said. "People here think this is very interesting and you don't hear of it often, if at all."

Doug Phelps, a member of an amateur radio club in neighboring Schaumburg, has an explanation.

His organization, the Illinois chapter of the Motorola Amateur Radio Club, rebroadcasts NASA video as a public service. It is likely the monitor is picking up the video because amateur radio operates on the same frequency as baby monitors.

Members of Phelps' club have picked up audio from baby monitors in the past.

"If you had a receiver in the right frequency, anybody in the public can pick up this signal," he said.

Meilinger silenced disbelieving co-workers by bringing in a video of the monitor to show her class on Tuesday, her students' last day of school. At home, 3-month-old Jack and 2-year-old Rachel don't quite understand what their parents are watching.

"I've been addicted to it and keep waiting to see what's next," Meilinger said.

Summer Infant, the monitor's manufacturer, is investigating what could be causing the transmission, communications director Cindy Barlow said. She said she's never heard of anything similar happening.

"Not even close," she said. "Gotta love technology."

3547. Re: [TARC] Will some of you get the job?

Yahoo group: Temple_ARC
Date: 2007-06-20 15:00:10 UTC
From: GORDON BLAND
Topic: 3547 Message: 3547

Will some of you get the job?

ARE YOU WAITING TO BE CALLED?

Back when the telegraph was the fastest method of long-distance communication, a young man applied for a job as a Morse Code operator. Answering an ad in the newspaper, he went to the office address that was listed.

When he arrived, he entered a large, busy office filled with noise and clatter, including the sound of the telegraph in the background. A sign on the receptionist's counter instructed job applicants to fill out a form and wait until they were summoned to enter the inner office.

The young man filled out his form and sat down with the seven other applicants in the waiting area. After a few minutes, the young man stood up, crossed the room to the door of the inner office, and walked right in.

Naturally the other applicants perked up, wondering what was going on. They muttered among themselves that they hadn't heard any summons yet.

They assumed that the young man who went into the office made a mistake and would be disqualified.

Within a few minutes, however, the employer escorted the young man out of the office and said to the other applicants, "Gentlemen, thank you very much for coming, but the job has just been filled."

The other applicants began grumbling to each other, and one spoke up saying, "Wait a minute, I don't understand. He was the last to come in, and we never even got a chance to be interviewed. Yet he got the job. That's not fair!"

The employer said, "I'm sorry, but the last several minutes while you've been sitting here, the telegraph has been ticking out the following message in Morse Code: 'Now if you understand this message, then come right in. The job is yours.' None of you heard it or understood it. This young man did. The job is his."

3548. Golf Cart

Yahoo group: Temple_ARC
Date: 2007-06-20 17:50:59 UTC
From: Michael C. Sherrod
Topic: 3548 Message: 3548

Never having attended a Field Day in the past, in Temple I wondered if there was any conceivable reason why a Golf Cart might be a help during the Field Day activities. Mainly for any handicapped operators and/or visitors to drive to and from restromm, parking, BBQ areas. Just a thought...Looking forward to attending the event.

3549. 444.700 Repeater Back On-The-Air

INFO ONLY...

The TARC 444.700 UHF Repeater, which has been
OFF-THE-AIR for the past few days, is now back on.

Thanks to Jerry, KA5AIE, and Eddie, KD5UBP, for
their assistance at the site.

Yes! A golf cart would be nice for those who have trouble walking any
distance. Getting to the bathrooms would be much easier with a golf
cart to use.

Thanks to all who came out today and assisted getting the Field Day site set up. I won't try to name everyone because surely I'll overlook someone. The place looks great, and the weather even looks favorable. If you can only come out for a while, make it around 5 pm tomorrow (Saturday) for the family BBQ. Site and other details are here:

http://groups.yahoo.com/group/tarc_fd

3552. Thank you!

Thanks to all of you who made Field Day a success through your participation. This includes folks who showed up Friday to help set up, folks who operated Saturday through Sunday continuously, folks who showed their support and fellowship of our hobby and those operating by showing up just to visit and for the club BBQ dinner, folks who got out and welcomed our visitors, and the folks who showed up Sunday to take the setup down. Whether you were able to come for a few hours or all three days, your contribution was essential to the success of this TARC event.

3553. Kenwood to merge with JVC next year

Yahoo group: Temple_ARC
Date: 2007-06-27 14:57:36 UTC
From: john_ke5c
Topic: 3553 Message: 3553

Kenwood to merge with JVC next year (Jun 25, 2007) -- This Week in Consumer Electronics (TWICE) reports that Kenwood has agreed to merge in 2008 with Victor Company of Japan (JVC) under a holding company. JVC is owned by Matsushita Electric Industrial Company. Japan's Nikkei business newspaper reports that the final details should be worked out by the end of the month, and that under the plan, Kenwood will buy 20 billion yen ($161,469,466) in JVC shares as early as this summer, raising its stake to 13 percent. Matsushita will also sell part of its 52.7 percent of JVC to Kenwood's top shareholder, the Sparx Group. When JVC and Kenwood integrate operations under the holding company in 2008, Matsushita will sell the rest of its JVC shares to the holding company to complete the transaction. The holding company's stock will be listed instead of Kenwood and JVC, according to Nikkei. Combined, Kenwood's and JVC's sales are $7.3 billion dollars annually for their fiscal year that ended March 31.

Topic: 3554 Message: 3554

As Field Day Coordinator for our ARRL affiliated club for the past three years, Ron Thompson, a tireless captain of our GOTA station also the past three years, forwarded your recent email to me. After nearly 30 years in amateur radio there is little that surprises me or galls me, but your response to Ron takes the cake for ridiculousness coming from Newington, CT. Time and time again I have seen the whiners and belittlers given precedence in this hobby over those who actively and cheerfully participate, and here you go again. The proposition that a 1X1 call offers an advantage in a contest could only be made by folks who are incapable of winning a contest with a single letter callsign. The logical conclusion of that argument is that all contest entrants must have the same number of characters within the same pattern in their callsign else how could the contest be fair? Will the ARRL next handicap contests by call sign? Let's see, the base score for a 1X2 callsign stands while a 2X1 gets a 5 percent bonus because folks still are expecting the old 1X2. Next a 1X3 gets a 10 percent bonus and a 2X2 gets 15 percent. The poor 2X3's get 25%, and anyone using a stroke for portable or call area indication gets 35 percent. Finally, deduct 5% from the scores of those with 1X1's for their unfair advantage. Is that where you are headed?

And by the way, Field Day is an emergency operating training event and club social activity, not a contest. I know of no red-blooded contester who considers Field Day even remotely a contest, and I was part of a club that "won" class 1A in 1984 so I can speak with some experience. If you believe Field Day is not a special event, you ought to just close down the ARRL and donate your very generous salaries to charity (or the W5YI VEC).

Respectfully,
John Dvoracek, KE5C
Temple Amateur Radio Club FD Coordinator
Temple Amateur Radio Club Director 2005-7
(The Temple Amateur Radio Club gave $1,000.00 to spectrum defense in 2006 - at least someone in Newington has some real work to do.)

Subject: Holding W5T

Thank you for your appliation for a special event 1x1 callsign.

As per requests for 1x1 station callsigns in 2008, there's a small informal hold on them - until the concerned special event call sign

coordinator VEC's get together to determine assignment requirements and parameters.

The original intent of the Special Event Call program was not to use the 1x1 calls for contests, to include Field Days, QSO Parties, etc.

There has been a significant amount of complaints from persons and clubs in contests where the shortened call may have a better advantage over the station not using a 1x1 special event call.

Therefore your request is being placed on hold, until a decision is formed by all of the Special Event Callsign Coordinators
.
I hope that while your appliction is on hold, that you may also have patience and understanding in this difficult situation.

Regrets,

Perry Green, WY1O
Special Event Callsign Coordinator

Addendum From: The 1x1 website at
http://www.ncvec.org/1x1page.php

The Special Event Call Sign System meets the needs of amateur operators for temporary operation of their stations during events that are of special significance to the amateur service community.

A Special Event Call Sign is an amateur station call sign with a one-by-one call sign format that may be reserved for assignment to stations operating in conjunction with these short-term events.

Frequently Asked Questions

Q. Just what is considered an "...event of special significance to the amateur service community?

A. There are only 750 call signs available for temporary use. A special event operation usually commemorates an event which is publicly significant. Ideally, this is a one time, non-recurring celebration, festival, anniversary, holiday, convention, dedication, public demonstration and the like. Special event call signs may not be requested just so that you will be able to have a short call sign during an upcoming amateur radio operating event or contest.

A special event call sign coordinator may determine that your planned special event operation is not in keeping with the intent of the Special

Event Call Sign System.

John,
Could not agree more. Field Day is just that...much like a military field training exercises. You know it is certainly odd that when we have a "real emergency"..you just can't find one of those "contesters" but you will most assuredly recognize the field day people because they are there. Great response John.

From: decision@sbcglobal.net
Topic: 3556 Message: 3556

Gentlemen,

It sounds like the Temple club wanted to becreative at Field Day, with the intent of making full use of provisions in the FCC Rules. The event involves a public demonstration, and is of "special significance to the amateur community."

I have a long standing position that if the FCC Rules permit a person to use an amateur license to do a particular function, ARRL should support it.

It seems if this became a problem the FCC staff would speak up about it - - and I haven't heard that. Yes, issuing a lot of 1x1 call signs, on a first come first serve basis, would make the administrators busy.

The W5YI organization is now run by NB5X, and is local to me. I'll ask him for his views on this the next time I see him. He exhibited at the Hamcom and at Dayton.

I have some additional comments, below...

>

In the time I have served as a Section Manager, the top Field Day points in Texas and Oklahoma were earned by the Midland Amateur Radio Club. I have a photo of the award they received on the North Texas ARRL web page, URL below. In North Texas, the highest points were earned by the Southwest Dallas County ARC, at Cedar Hill. I expect both clubs to have impressive scores in 2007.

When I was an undergraduate student at UT-Austin, I had a special pass that let me go up in the tower. That was before the library stacks were moved to the new building, which then became the single largest library in an area of 5 or 6 states. I don't think the UT tower would be appropriate for use at a Field Day event. The UT-Austin club has a nice facility and antenna farm on top of an Engineering building.

3558. Re: Holding W5T

Yahoo group: Temple_ARC
Date: 2007-06-28 18:10:40 UTC
From: TOM BLACKWELL
Topic: 3554 Message: 3558

Gentlemen,

Let me add I'm surprised to hear about this, because the Field Day results for 2006 published in the December QST show several entries with 1x1 calls, including W5T and W5R. I did not know any of this was taking place this year until I received the EMail yesterday, several days after Field Day had concluded. I've seen several situations where ARRL appears to be inconsistent - - where things that are understood to be settled are changed in mid course, and reasonable expectations are not met. It is also my view that if the FCC Rules permit a person to use an amateur license to do a particular function, ARRL should support it.

Subject: W5T Approved for ARC Field Day - 2008

Ronald,
Your request for use of the Special Event Call Sign has been reviewed and approved for the time frame requested.

A record copy of your authorization as it appears in the Special Event Call Sign Database is embedded in this e-mail message.

In addition to this authorization, you may also view your approved record in the NCVEC database at www.ncvec.org

This is the only official usage notice you will receive; no license, certificate or any other document is issued. You may desire to print a copy of this e-mail for your record.

In accordance with current FCC regulations,[Part 97.119 (d)], please remember to identify your station (or stations) at least once per hour using the control operator's regular assigned call, with the special event call.

If you are planning to have a listing in QST or on the ARRL web site; please submit the request via www.arrl.org/contests/spevform.html, or contact maty@... for concerns in this regard.

Please feel free to contact me for any questions or further concerns regarding your call, or the special event call sign program.

73,

Perry Green, WY1O
Assistant VEC Manager
1x1 Special Event Callsign Administrator for
A R R L - The national association for Amateur Radio

I will go you one better.

Here is a list of entries so far for this years FD.

http://www.arrl.org/contests/claimed/repUv7URN.html

Several 1x1 calls already submitting results.

Including:

http://www.ncvec.org/record_details.php?id=4048
http://www.ncvec.org/record_details.php?id=4668
http://www.ncvec.org/record_details.php?id=4245

In fact for even more fun, go here:

http://www.ncvec.org/search.php

Enter field day in the 'search by event box' and see them all.

3562. Invitation to Temple Amateur Radio Club program July 5

Yahoo group: Temple_ARC
Date: 2007-06-30 17:56:02 UTC
From: ke5c
Topic: 3562 Message: 3562

HOTARC and WCARC Presidents,

Would you please distribute an email reflector invitation to your members to attend the TARC meeting program this coming Thursday, July 5. Our guest speaker will be Jim McClellan, N5MIJ, who is the national coordinator for the D-Star USA network backbone. D-Star is a point-to-point amateur repeater to internet to repeater protocol for voice and data developed by the Japanese Amateur Radio League and currently supported by Icom - only after the urging of Icom-America to get the engineers at Icom headquarters interested and involved. Those of us even modestly involved believe this is a work in development which may be the next great VHF/UHF technology.

Jim will give an overview of D-Star and answer questions. We plan to demonstrate handheld QSO's with Dallas and Australia as part of the program. Our meeting begins at 7:00 with introductions and the program follows immediately. Refreshments will be available after the program and before our regular business meeting commences. Call on 146.22/82 tone 123 or 447.00/442.00 D-Star if you need additional directions.

TARC Meeting Location: Church of Christ, 210 N General Bruce Dr (I35 access road), Temple, TX 76504 (Across I-35 from Starbucks)

From either direction exit Nugent Avenue in Temple. From the north this is the exit following Industrial. From the south this is the exit following Adams/Central/2305. If coming from the north, stay on the southbound access road after the Nugent stop sign. If coming the south, turn left across the interstate at the Nugent stop sign, then turn left again onto the southbound access road.

Continue about two city blocks on the southbound access road. You will pass Horny Toad Harley Davidson, Texas Roadhouse restaurant, a few motels, and a Chrysler - Jeep auto dealer. The church is the next building after the auto dealer.

73, John
TARC Program Director

3568. July 4 Belton Parade

Yahoo group: Temple_ARC
Date: 2007-07-01 22:22:45 UTC
From: k5doa@vvm.com
Topic: 3566 Message: 3568

Our participation in the line up process for the Belton July 4th parade is coming up Wednesday morning.

We will plan on meeting at the parking lot at the corner of 9th and Pearl at 7:30 on Tuesday morning. Enter Mary Hardin through the main gate on 10th from 317 and turn left on Pearl at the next intersection. Then turn right on 9th and enter the lot. If you should be late, and the city has already closed 317 through town, it will be necessary to enter the campus from the west side off loop 121.

Jason Morgan will be our coordinator again this year - same as last. So we will have the usual set of printouts showing where things go. I have not heard of any new wrinkles in the parade this year. Line up will be along the same two paths as last year.

We will plan on using the Belton repeater as usual. The frequency is 147.3/147.9 with a 88.5 tone. It has worked great for us in the past.

There should be plenty of water available.

Tee shirts will be not be provided this year. They will provide one of those bright yellow vests instead. However, I would hope that most of us can just wear our TARC shirts to show off the club. Otherwise, the vest will work fine.

Be sure to bring some strong sun block and a big hat. Rain gear might be indicated, although the current forecast would indicate that it will delay until later in the day as has been the case the past couple of days.

Thanks to all who have indicated they can help. We can always use more help. This is a good event that exercises our communications capabilities. If you are a new ham, this is a good event to get involved with. Even if you have not purchased a radio yet, we can pair you up with a buddy on the line up team.

If you have not indicated to me that you can help, please drop me a note at k5doa@.... Or if you don't know until the last minute, just show up on Wednesday.

The parade starts from 10th and 317 at 10 o'clock. If past experience is a clue, we should be done sometime at or before noon.

I will be attending the last meeting Tuesday afternoon, so check here on the reflector Tuesday Night for any last minute changes. Otherwise, see on Wednesday morning. 73 - Darwin K5DOA

3571. CQ Magazine - June 2007

Yahoo group: Temple_ARC
Date: 2007-07-02 02:24:28 UTC
From: John Hobson
Topic: 3571 Message: 3571

I am looking for a copy of the June 2007 CQ magazine. I am interested in an article on building a 200 watt dummy load with peak detector.

I have been able to purchase CQ in the Ft Hood PX and a local book store in the past when I found articles I liked. Both have stopped carrying CQ in the last 3 months. I would appreciate if a TARC member would help me get a copy of the article I am looking for.

I'll check. I just renewed my subscription to CQ and got an issue in the mail last week. It will either be a "late June" or an "early July" issue. I'll check when I get back home tonight.

Nothing special, but I was able to make eight good satellite
contacts yesterday via AO-51. It is in FM Repeater mode,
V/U -- no tone required. Uplink 145.920 MHz, and downlink
435.300 MHz (FM). It will be in this mode July 1 - July 9th.
Below is one of the stations worked:

I don't have the June 2007 CQ magazine to help out John, but I would like to mention a "200-watt Dummy Load" that you can buy for $18.99, that is good way past 1.2 GHz (2-GHz I think). It comes with a female "N-Connector" and plenty of heatsink. Even though I have built a number of dummy loads in my past, this particular item might be something you could use? It is available from Ridge Equipment Co., Eldersburg, MD, phone (410) 549-7661. (A jpeg of the 200-w dummy load is attached)

Charlie,

Thanks for the help. I looked up the Web site you showed. Great price for a good dumby load.

I have just completed a 50 watt dummy load using a new low inductance resistor. I will bring it Thursday if you are interested since you are also into building things. I believe the article I am looking for is on building a 100 watt dummy load using these resistors. I was thinking of making one with one of the 100 watt resistors I already have. But it is hard to beat the price of the dummy load you mentioned.

Myron,

I haven't received any "Medals" lately, but I do have
a METAL DETECTOR that you are welcome to borrow.
It's a "JETCO" job, called a "Mustang Treasure Finder."
Maybe it will help?

3585. Fwd: [CQ-Contest] K3 initial comments

Yahoo group: Temple_ARC
Date: 2007-07-05 15:33:41 UTC
From: john_ke5c
Topic: 3585 Message: 3585

As part of the Elecraft K3 beta test team, I thought I should give the contesting community some initial impressions of the radio. I am testing serial number 013 (although the serial number tag is still at Elecraft) and it was one of the first units shipped with the 100 W (actually 120W) module installed. I do not work for Elecraft, but was invited to be a beta tester. I have had the radio for two days now.

You can see the datasheet for the radio at the Elecraft web site.

www.elecraft.com

Simply put - this is a great radio. I can't wait to get a second one so I can fully move my SO2R station over to them.

A few years ago, I was hoping that the K2 would be that radio, but there were a couple of minor issues that kept me from really being comfortable with that radio in a CW Sprint. However, these issues are fully addressed in the K3 - and the radio has grown up to be a world class unit that will rival everything else on the market.

Soon - there will be numbers published to back up some of my impressions, but slipping on the headphones and listening to this radio has been very enjoyable.

I will be taking this up to KL7RA's QTH for the IARU contest. Iill follow this up with more details on my observations after that.

3586. Ham Radio Classes

Yahoo group: Temple_ARC
Date: 2007-07-06 04:22:28 UTC
From: Charlie Schlieper
Topic: 3225 Message: 3586

The next Ham Radio Classes, sponsored by TARC, will run from August 20, 2007, to September 20, 2007, a period of five weeks. Classes will meet on Monday and Thursday evenings, from 7PM to 9PM, in the fellowship hall at the Western Hills Church of Christ, 210 North General Bruce, in Temple.

The class tuition is FREE; however, students are expected to purchase their study guides, which will be provided by the club. The list prices of the ARRL books are approximately as follows: Technician $24.95, General $19.95, and Extra $24.95. The club gets a discount of a few dollars below these prices, and passes on the savings to all students, at our cost.

All classes of license will be taught, if the need dictates. The Extra Class will only be held once a week, for a total of five nights, either Mondays or Thursdays-- as found best for the majority. General and Technician classes will meet twice a week, unless otherwise changed. The General Class may begin at 6:30PM instead of 7PM each evening, at the discretion of the instructor.

You do need to register for these classes. Contacts are:
Tom Olsen, AE5AP, TARC President, tomolsen@...
Darwin Geiselbrecht, K5DOA, Extra Class Instructor, k5doa@...
Roy Wells, N5HQR, General Class Instructor, n5hqr@...

Topic: 3225 Message: 3587

I hope we have a good turn out. Although the compressed course schedule for the Extra Class takes a good deal of outside study, we had a 100 percent pass rate for all who stayed with the course last time. So it would be a good time for some of our newer general class hams to upgrade to the highest license and gain access to those extra kilocycles (sorry, kilohertz).

Please use k5doa@... for my email. I no longer use the aol account.

3591. Whoops!: ARRL Field Day Entry Form - 5, 962 (not 4,632) points

Yahoo group: Temple_ARC
Date: 2007-07-07 17:48:31 UTC
From: john_ke5c
Topic: 3589 Message: 3591

> SUBMISSION CONFIRMATION FROM THE ARRL CONTEST ROBOT:
>
> Total Bonus Points 1,330
>
> Total Points 1744 0 572 2316 Claimed Score = 4,632

I just realized the ARRL Contest Robot means Total *QSO* Points when listing "Total Points". The "Claimed Score" refers only to the portion of the final score derived from QSO points which is twice the "Total [QSO] Points" due to our power level multiplier. This is not the final Field Day score which is the sum of "Total Bonus Points" (1,330) and the "Claimed [QSO] Score" (4,632) or 5,962. Compared to past year's final scores:

2007 - 5,962 - 23 hours, phone unmanned for long times
2006 - 2,608 - bad conditions, poor antennas
2005 - 6,426 - both stations manned 24 hours
2004 - 6,160 - both stations manned 24 hours

Geeze, I knew that in spite of long periods when the phone station was unmanned, that we had to have done better than 4,632 points - it just felt that way. Shame on us, but we quit an hour early. We felt fortunate to have had 23 hours uniterrupted by rain, and the clouds were building. The tear down crew was getting anxious, and we didn't realize how close we were to our best recent score (2005).

Thanks again to all, and sorry I didn't catch this earlier.

-------- Original Message --------
Subject: W5LQ QTH - home listing
Date: Tue, 10 Jul 2007 07:29:18 -0700
From: Schmidt Jeff-rsja60 <Jeff.Schmidt@...>
To: <haminfo@...>

All,
Ed W5LQ and Martha NU5R Underwood are moving back to the Carolinas and subsequently,
are wanting to sell their ranch home near Florence.
As the property favors Amateur Radio, he would prefer selling to a Ham.

Ed has nicely requested I forward his listing to my distribution list.

Jeff N5MNW

I would greatly appreciate your sending this out to your list. Many thanks.

73, Ed W5LQ

Very desirable home / ham QTH with 72 ft motorized tower for sale

Private Gated Community, River Ridge Ranch, 1 mile south of Lampasas River just west of Hwy 195, about 10 miles south of Killeen, 8 miles north of Florence. Quiet country living with beautiful long distance views.

Ranch style home, 2310 sq ft, single floor, Dining room, Living room, Family room, Kitchen, Master bedroom suite with plenteous appointments, 2 other bedrooms, utility room with laundry plus hobby or office space, on 8.9 acre lot, almost hill-top.
Extra thick concrete slab floor
High efficiency Trane A/C and heat pump
Very thick attic insulation, and good wall insulation
Good attic storage
Low electricity usage for heating and cooling
Total brick exterior
Hardie-fiber cement plank exterior trim
Outside water cut-off valves
240 foot asphalt paved driveway
Beautiful rear view of several miles

Steel barn 1500 sq ft insulated with concrete floor, water and electricity
Extra building 20-ft by 10-ft near tower, maybe hamshack?
Ham tower, 72-foot motor telescoping, US Towers HDX-572MDPL, and TH7

triband beam antenna, plus unmounted Cushcraft 2 el 40M beam
Very quiet QTH, generally less than S1

14-acre adjacent lot is also available

Priced at $284,000 (for sale by owner) - (will be higher if we must list
it with an agent)

Contact Ed W5LQ or Martha NU5R Underwood for more information and
photos.
254-793-3767 home, 254-368-1162 cell

Hi there from "Gordo"! I hope we have worked on the air. If so, I QSL 100% with a self addressed envelope and YOUR QSL or post card. For West Coast contacts, I am on 40m every weekday 8:30am to 9:00am on the Gordo net, 7250 kHz.
To my many students looking me up on QRZ, GET ON THE AIR and have fun with ham radio. Join the ARRL to support our service and frequencies. Join a club, and stay ACTIVE!

The FCC just announced in a R & O (Report and Order) that code tests for the general class license and higher have been eliminated , as of February 23 , 2007. NO MORE MORSE CODE TESTS FOR GENERAL AND EXTRA !We will continue to teach Morse Code in our classes , and we will see more hams go up on HF and like the Code , and will learn it on their own .

SEE YOU IN 2007 :

FIELD DAY , June 23 and 24th , ON THE AIR !

Orange County Fair Ham Radio Booth , July 13-Aug 5

July 21 & 22 General Class upgrades , in Costa Mesa

August , Christmas Island , T32GW for three weeks !

September 5 , 6, 7th San Diego mariners sessions

Sept 7 , 8 , and 9th ARRL Southwestern Division convention , LA .

Sept 15 and 16 ARRL 10 GHz , on the air !

Sept 22 and 23 Beginner Class , in Costa Mesa , Technician !

October 5 - 7 , San Diego , Mariner's class .

So get on the air , and enjoy ham radio ! Best 73 gordo

3610. Latest TARC News and Upcoming Events

Yahoo group: Temple_ARC
Date: 2007-07-29 00:08:53 UTC
From: Warren Rowe
Topic: 3610 Message: 3610

Here are the latest tidbits of TARC news and upcoming events from all over as they are known to be as of this posting. I decided that I wanted to do this to hopefully help keep people up to date with what is going on:

The 2007 Texas QSO Party...

This year's version of the Texas QSO Party will be held on the weekend of September 29-30. The operating times are as follows: 1400Z to 0200Z on both days. (This is updated from previous years; I only found out the new times today - WR1TX) Several TARC members are looking to possibly enter TARC as a multioperator entry. If you have any comments about this or would like to help out, contact WR1TX or AE5AP for more details.

FISTS News...

To those who don't know, TARC now holds an official club membership to FISTS; our membership number is #12900. For those individual club members, this should be great news! A new database will be put together that will show FISTS members located in the following Central Texas counties: Bell, McLennan, Williamson, Burnet, Milam, Lampasas, Coryell, and Falls. If you know anyone that is a FISTS member that is located within any of these counties, contact WR1TX in person or at wr1tx1@...m; he is the one who is taking it upon himself to put together this database.

On July 11-18, FISTS members WZ8C, WB5IUU, WF5W, K5WAF operated as VP2V/callsign from Tortola (IOTA #NA-023) in the British Virgin Islands. When more information as to how that DXpedition turned out, I'll let everyone know!

Upcoming FISTS events include the following:
1) The Get Your Feet Wet Weekend contest will be held on Sept 14-17. Contest times are 0000Z on the 14th through 0000Z on the 17th.
2) The International G3ZQS Memorial Straight Key Contest will be held Sept 7-9. Times are 2300Z on the 7th through 2300Z on the 9th.
3) The Coast-to-Coast Event (C2C) will be held Sept 29-30. Times are 1700Z on the 29th to 1700Z on the 30th.

Check on the various FISTS websites for more information, starting with http://www.fists.org/.

TARC August Meeting...

The next regular TARC meeting will be this Thursday at 7 pm. THis meeting is also our annual Ice Cream Social! A special guest that will

be on hand will be none other than Coy Day, N5OK, who is the ARRL West Gulf Division director. As I know it, he will not have a program lined up but may say a few words. Regardless, welcome Coy to the meeting and enjoy the ice cream!

Weekly TARC Nets...

Don't forget the weekly TARC nets which are held at 7 pm every Monday night on the 146.820 repeater, PL tone of 123.0. Your presence is requested!

The McDoonald's Social Hour...

Several TARC members and visitors have been gathering at the McDonalds located at Adams Avenue and 31st Street Monday through Saturday mornings. You would be pleasantly surprised at the topics covered at these get-togethers! Come on by and enjoy the pleasantries, the food, and of course a great time.

Hope to see you at the club meetings and other functions soon!

Warren Rowe, WR1TX
Temple, Texas

From: k5doa@vvm.com
Topic: 3225 Message: 3614

Jerry - I'm sure you will fit right in with the rest of us.

Do you need a book? I will be ordering some (cost $20). But they haven't changed in several years, so you may have one.

The classes will be on Monday's at 7 PM from August 20 to September 17 (5 sessions).

Hope you can make the ice cream social tonight. 73 Darwin

3615. Attn: K5CTX D-Star users

Yahoo group: Temple_ARC
Date: 2007-08-04 18:54:42 UTC
From: john_ke5c
Topic: 3615 Message: 3615

An echo test program is running. Currently I have to start it manually, so if the gateway computer is restart for any reason, the echo program will have to be restarted by me. I'll eventually fix that. To use it:

UR = K5CTX E
R1 = K5CTX B
R2 = K5CTX G
UR = your call as usual

This only works locally. You cannot echo across the gateway (yet...). This program also reports when you have gotten into the gateway computer to request an echo test. I may try to route that output to a webpage (hard to do without a web server running, but not impossible) so you can see if you made it.

73, John

VE testing
Sunday, August 12, 2007. TSGARC Clubhouse. 2:00 p.m.
TSGARC Dinner/Program
Monday, August 13, 2007
6:00 - 7:00 p.m. Dinner - An assortment of casseroles, desserts and ice tea
7:00 - 8:00 p.m. Program - The theme for this month’s program will be "gadgets." Bring your favorite gadget or gadgets to the program and share your enthusiasm for why you bought or constructed it. This should be lots of fun and I know that many of you have already demonstrated a lot of them in the past on slo-scan. Let's see these little items displayed at the clubhouse this Monday for all of us to enjoy and "question.” They can be anything, regardless of the use, and that includes, ham radio, camping, kitchen, and anything that made your life more comfortable. Hope to see you there with your "stuff."

The TSGARC Clubhouse is located at 3292 Speegleville Road in Waco, halfway between HWY 6 and HWY 84.

3638. Does TARC have a "Welcome package"?

Yahoo group: Temple_ARC
Date: 2007-08-14 02:48:02 UTC
From: Mike Hankins
Topic: 3626 Message: 3638

Greetings Club Members,
During the 7PM Monday call-in I overheard that at lunch there was an HF net. I was not aware of this going on. It makes me wonder if the TARC has a welcome package for new HAMs describing the activities (including annual events) that the club has; perhaps a list of good frequencies in certain areas to use; and/or a list of all the members. A new person should not be expected to "search" for this on their own.

My wife made her first ever transmission at the end of the net today. She is KE5PXP...Andrea Hankins and told me to "Sign her up" as a club member of the Temple Amateur Radio Club.

See you at the Extra Class next Monday !

"73"
Mike Hankins, KE5NWG

Mike,

I know of NO HF Net that is sponsored by, or has anything to do specifically with TARC. This is not to say that some of our members don't regularly involve themselves in Nets of some type. Some of us check into RACES, ARES, and other Traffic Nets, but I know of no specific HF NET that is a TARC function.

Thanks,

Charlie, N5TD

Mike
We don't have any official welcome package but it might be a good idea. We have had (I'm guessing here) about 15 new members. Many new members are newly licensed and several are either experienced hams new to the area or hams who have returned to the ham radio after several years away from the hobby.

For me the number is manageable and I can respond to each person individually and let them know they are "welcomed" to the Temple Amateur Radio Club and that we are here for them.

There is a lot going on in Amateur Radio in these parts, and part of the fun of this hobby is learning and getting help from other more experienced hams or Elmer's. I think sometimes we could do a little better with this, but then I think of all the hours that Charlie, Roy and Darwin have put into preparing and elmering hams just this year, and I know we are providing a great service to our members and the community.

I have a little bias, I guess. It's pretty easy these days to buy a book or get online and study for the exam by trying to memorizing all the questions the FCC could throw at you. For some, due to work schedules or location, that may be the only way to get their ticket into ham radio and I applaud their effort. But to my way of thinking, there is nothing that can compare to getting a group of guys/gals together all working towards the same goal with volunteer instructors who are both knowledgeable and care. Amateur radio is a relationship type hobby. We learn from each other.

Chuck,

Why would the galvanizing not be a good radiator? It’s metal, may not be insulated from ground very well though, thus not very efficient.

I am not all that sure of the chemical reaction and so forth, but it will cause rectification when submitted to electrical forces. When I was a young Ham , I was once (actually more than once) plaqued with a TVI complaint from a party over a mile away . I had no problem at home nor did my nieghbors. I was at a loss , but the interfersnce was only when I was on the air. The RFI Committee from a local club (I did not belong) was invited into the mix by the FCC to try to solve the problem . The RFI was being caused by the complaintants next door neighbor's rain gutter. I was on 75 meters , so was the gutter causing rectifacation and spurious emmissions. The gutter was broken into shorter sections with insulation and went thru some grounding and I never had the problem again. Made a believer of me . As a new Ham and Ex-CBer , I was thoughily impressed with the efforts of the local FCC office to defend my position as well as those of the club that helped out. The RFI crew was lead by our past ARRL president Jim Haynie W5JBP . Long live Ham Clubs Chuck

Paul, I should have commented about the grounding . This does not stop radiating. Every antenna I use is DC grounded . Check them with a Volt/Ohm meter , they are shorted on the coax , check them to ground , they are shorted to ground. A common antenna to look at and try to better understand how this works is the J-Pole . This procedure will discharge the static charge in the air near the antenna to ground . This will prevent a large discharge or Lightning . Another benefit is fewer static discharges causing a noisey recieve. This will not protech you from a large Lightning strike from afar or elimanate all static, but it goes a long way. All Hy-Gain beams are DC grounded by design , Force on the other hand insulate theirs. It is just a matter of how you feed them. I hope I have helped Chuck Wq5B

Chuck,

I understand the DC ground on the antennas but this is more like an un-tuned random length wire that you would load with a tuner. It would be very hard to get the correct length on a rain gutter system and shunt feed it. I may have misunderstood but I thought he was talking about the HF bands. Random length wire antennas are not DC grounded but require the use of a tuner.

Chuck,

I can understand the rectification due to the oxidation on the joints but galvanized rain gutters are very easy to solder together to correct that problem. After that all you have to do is make sure it's grounded in odd places. Anything done in the way of connections needs to be done by soldering, no screws with crimp connectors. All of this depends on if you own the property and have the right to modify the gutters.

The ground is opposite for a radiator, need to insulate it from ground of possible and load it up and see what happens. The problem I see is if the gutter is screwed to a brick building face in several places the "antenna" could change drastically due to the screws into the wet brick being a conductor. If the gutter is long enough and far enough off ground I would think it would be a fair long "gutter" antenna. But look out, if you're in an apartment just think of how many people you may interfere with!

Guess if you had enough power it would be self drying. <GRIN!>

have misunderstood but I thought he was talking about the HF bands. Random
length wire antennas are not DC grounded but require the use of a tuner.

Yes, HF and I also think it will behave like a random wire, but I just
learned he has access to two downspouts which connect to the second floor
horizontal gutter. I am also thinking of feeding each at the bottom a la a
loop. It would be untuned and need to be fed with ladder line and a tuner
but it would be an untuned loop analagous to an untuned dipole that is also
fed with ladder line and a tuner -:)

Thanks for the thoughts, 73

From: ChuckSchultz
Topic: 3645 Message: 3654

Paul, I was not suggesting that my antenna solutions at my QTH would be his answer to a stealth antenna for his son . I was merely pointing out that just because something was grounded did not mean it could not be an effective radiator . I do disagree however about shunt feeding a random length. Again , I shunt feed a tower that is just what I happened to install, it is shunt fed at a resonant point to make an affective vertical antenna for HF. (75 meters). Given my experience with one rain gutter , I will admit that I am very bias against gutters. To rebuild an existing gutter system to include bonding and soldering the joints just might lose it's ability to remain stealth. This still would not eliminate the possibility of rectification between the metal and the galvanize plating. Random length wires unless multiples of wavelengths have trouble performing as a much shorter but resonant piece of wire. I wish I were nearer , for I would like to work with this problem of stealth vs desire for the young man. I will be watching this sight in hopes that this becomes a club project to help him out . I would like to see the end solution printed here and later work the station via the air waves. Chuck

3655. Hurricane Dean Alert / ARRL News Clip

Yahoo group: Temple_ARC

From: Tom Olsen
Topic: 3655 Message: 3655

TARC
Dean is a long way away but now is a good time to start thinking about what our personal and club response might be in case of an emergency in our area. This is good time to gas up your vehicles and get your home prepared in case of power outages. As might be expected, should Dean hit Texas, gas and other supplies will be funneled down to the coast and may be in short supply in our area.

Dean is tearing up the Caribbean right now and is showing 150mph winds which will intensify.

Check out the ARRL news clip.
http://www.arrl.org/news/stories/2007/08/17/100/?nc=1

As most of you know, I grew up along the Gulf Coast of Florida and have been thru many of these events, the lastest being Francis just a couple of years ago. Since the power companies like to string lines in the sky, they are the first to go down. We lost all utilities for almost 48 hours, and that was mild.

Thanks for now, I will keep you informed.

Dean will probably not make landfall till late next week and just where is anyone's guess. We can expect folks living along the coast to be thinking about moving inland and Temple will be a destination for some. For our area, evacutees, flooding and possible tornados may be part of our next weekend.

The attached pdf file show current plans at a state level. Again we have plenty of time but Dean is definately not going away. Let's think ahead.

HURRICANE OPERATIONS NET TSGARC/W5TSG

In Support of: TXSG, Satern and American Red Cross

Hurricane: DEAN

August: 2007
*Note-This information is to be used when and if the net is activated. Please standby for updates as we get them. The complete disaster plan and rosters will be forwarded also at that time.

NET OPERATIONS:

Emergency Event Coordinator: Leon Cheney K5zzm

Email : k5zzm@...

Phone 24/7 : 254-755-8116

Toll Free : 888-204-9909

Cell: : 254-855-2840

Net Control Coord: Bud Garretson Ad5sk

Phone : 254-822-1271

FREQUENCIES AND REPEATERS
W5TSG 147.320 +123
N5ZXJ 145.310 -123

Echolink Node 1947
SIMPLEX 147.550

CQ100 7.272

SATERN 20M 14.265
7290 40M 7.290 & 7.285

We will be operating on the W5TSG repeater for routine handling and will also monitor and work the 145.310 for echolink and out-of-area 2m traffic.

The frequencies which will be monitored will be Satern,7290 and CQ100.

We will need Net Control Operators should the Net be activated. You can operate from your Base Station or the clubhouse. We are set-up at the clubhouse to operate the entire net and would need some operators to work from there if possible. We will also need people to monitor the various modes of operation and that includes the internet as well.

Please notify me by phone or email as soon as possible when you could be available, either at the clubhouse or your base.

Better news this morning, at least, for most of the Texas Coast. Not so good for Mexico.

Dean's maximum sustained winds have decreased to 145mph and he is traveling a little faster at 18mph. At this point, the National Hurricane Center has predicted that Dean will keep a straight line course thru the Yucatan then make landfall in Mexico.

Dean Areal Shot
http://www.ssd.noaa.gov/goes/flt/t1/vis.jpg

Projected 5 Day Cone
http://www.nhc.noaa.gov/refresh/graphics_at4+shtml/084525.shtml?5day#contents

There are currently preparations going under way in Bell County which is now preparing to receive possible evacuees from Brazoria County. The Bell County EOC has asked for volunteers to assist them in manning the shelters. Also as noted in Karen's email, Leon Chaney w5zzm of the Texas State Guard in Waco has made preliminary preparations to monitor certain emergency communication frequencies and has put out a request for net control volunteers.

Right now this looks a little better than yesterday, but things could get worse real fast. Let's continue to monitor this event and continue with our personal and family preparations. Minimully we all need to double check our radios, antennas and battery backups.

Thanks
tom

Topic: 3661 Message: 3662

Right now Dean has taken a slight turn to the west with forward speeds now at 20 mph, and it's still a Category 4 storm with winds of 145 mph. It's shown a bit of a wobble, but this is normal for major storms like Dean. Jamaica is getting slammed as this is being posted now, with the Cayman Islands still to come, and it will be a long night for these island nations as hurricane-force winds are now reaching across the eastern half of Jamaica...especially the capital, Kingston.

Concerning the future track of this storm: beyond 2 to maybe 3 days the eventual track of Dean is highly uncertain, regardless of what the current forecasts might say. Yes, Dean should hit Cancun, Cozumel, and the large majority of the Yucatan Peninsula as at least a Category 4 storm and maybe even a Cat 5...but again, beyond that nothing is for sure.

Don't rule out the possibility that this dangerous storm could take a more northerly or northwesterly turn over the next day or two; this could mean major trouble for the Texas/Louisiana Gulf Coast should this happen.

Monitor the situation as it happens for now. There are several HF nets that you can monitor to keep up with the latest...the Hurricane Watch Net being the most notable. You can find that net on 20 meters SSB.

Otherwise for now...pray for Jamaica and the Cayman Islands, for those areas are getting hit horrifically.

Warren Rowe, WR1TX

3664. Hurricane Dean: Bell County Standing Down

Yahoo group: Temple_ARC
Date: 2007-08-20 13:37:24 UTC
From: Tom Olsen
Topic: 3664 Message: 3664

Looks good Bell County.
This is an update from the Brazoria County ARES group via Gary Dewrell at the Bell County EOC. Thanks to any TARC volunteers who helped out in preparing for this possible weather event. .

From: BCRES@yahoogroups.com [mailto:BCRES@yahoogroups.com] On Behalf Of gdewrell
Sent: Sunday, August 19, 2007 11:30
To: BCRES@yahoogroups.com
Subject: [BCRES] STAND DOWN ORDER

As of 11:00 am Sunday morning the Brazoria County Judge, based on the current track of hurricane Dean has decided evacuations will not be needed. All evacuation plans of Brazoria County to Bell County at this time have been canceled.

We will have our normal Tuesday night meeting at 7:00pm at the Com-Center.

I would like to say thanks to everyone. My last count was that we had somewhere around 30 people that were ready to respond had evacuations been necessary.

Special thanks to the Sheriffs Posse and the Temple Cert Team for being ready to assist.

3665. License Classes Tonight

Yahoo group: Temple_ARC
Date: 2007-08-20 22:00:02 UTC
From: k5doa@vvm.com
Topic: 2806 Message: 3665

Just a last minute reminder that the license classes start tonight (8/20) at the Western Hill Church of Christ. The General class runs from 6:30 to 8:30. The Tech and Extra class runs from 7 to 9. We should have plenty of books available so even if you have not signed up thus far, you can just drop in and we will add you to the class.

All books this time will be $20 for the license manuals (not Q and A). But you may use the Q and A if you have them and don't want to purchase the more complete license manuals.

3669. Fw: I passed the test today!

Yahoo group: Temple_ARC
Date: 2007-08-25 19:09:55 UTC
From: ke5c
Topic: 3669 Message: 3669

I am very proud that all the members of my Technician class that took the test passed the Technician License Test. One lady could not be there due to work commitments. I hope to have her tested by Wednesday. We had a total of eleven new Technicians and one new general including the drop-ins from Westphalia and Copperas Cove.

The class consisted of Temple and Salado CERT members and two Temple Fire Department members.

I have been asked to start another class for the folks interested in emergency communications and currently I am considering mid-October as a starting date. I will set the class with ten people and will accept up to fifteen students. I expect each student to have access to the Technician License manual from the ARRL. I will have copies available.

I also intend to have workshops for the new hams to train them on the equipment that is in the hospitals and other locations around the area.

I do not intend to conduct General or Extra classes and have pointed the new Technicians to TARC for those classes. If it is possible to get students into the current General Class please let me know, I have several that want to move on up.

Thanks to all and especially the students that put up with me for a month.

Joe B. Dorn, W5VEX

Congratulations to Steve, NU5D, in getting the 1.2 GHz Repeater on-the-air in Temple! I tried it right after I got home tonight from the Ham Class, and quickly found myself listed on "d-starusers.org" moments later. The DV frequency is 1292.100 MHz, minus 20MHz offset, with D-Star digital GMSK modulation. (The "DD" data frequency is 1253.000 MHz.)

N5TD 08/28/07 02:17:15 UTC K5CTX A 1.2GHz Temple, Tx

Looking forward to talking on D-Star via 1.2 GigaHertz!

3706. Hams Building Accessory Projects

Yahoo group: Temple_ARC
Date: 2007-09-16 20:59:20 UTC
From: Charlie Schlieper
Topic: 3706 Message: 3706

I have always enjoyed building things which relate to Ham Radio. Today, I ran across a picture which reminded me of a recent time past, when another ham friend [Tom Vanderveer, KG5II, SK] was building an isolated sound-card interface for use with Ham Radio.

Building ham-related accessory projects can be both fun and educational, and you always seem to learn something from the experience. Choosing projects that are relatively short time to complete are often best. A few projects that I have enjoyed are building antennas, dummy loads, power supplies, computer related radio interfaces, traps for antennas, keying circuits for hard-keying amps, field-strength meters, pack-N-go boxes for emergency field use, attenuators for direction finding, and modifying multi-function data switchboxes for station use.
I'm sure there are many others that you might come across.
Building ham-related projects is fun, and it can enhance your enjoyment of Amateur Radio. I encourage others to try it!

Have a nice day,
Charlie, N5TD

Brad Allan Killebrew

HUMBLE ☐ A memorial service for Brad Allan Killebrew, 35, of Humble and formerly Temple will be held at noon Wednesday at Rosewood Funeral Home in Humble. He died Thursday, Sept. 13, in Humble. Mr. Killebrew was born in Temple to William Lee and Dianne Killebrew. He was a systems engineer for the Texas Network. He lived in Temple until the age of 10 and moved to Humble with his family where he graduated from Humble High School. He received a bachelor's degree from the University of Houston. He was a member if the Institute for Electronic Engineer Computer Society, North American Network Operations Group and the American Radio Relay League. He was also an amateur radio operator - N5IQ.

Brad was the youngest son of Bill Killebrew Jr., WD5ELK a long time member of TARC and Temple resident. Those of us who knew Brad will miss him greatly.

In lieu of flowers, memorials may be made to the Atascocita United Methodist Church Special Building Fund, 19325 Pinehurst Trail Drive, Humble 77346.

I heard through the grapevine today I was the major topic of discussion.

To anyone i may have offended, I am truly sorry it was a mistake on my part and i should have known better. I will diligently try not to offend anyone else with my qso's. Ham radio has allowed me to meet many new people and become more familiar with all its activities.

As everyone knows i am Temple Firefighter i lay my job on the line daily by my actions and words. My call sign is public knowledge and im sure everyone has heard it by now on 2 meters or 70cm. I have had many a great conversation with many of you and anyone who has met me can assure you i am a respectful person and would never say a bad thing about anyone or to anyone. I was an Army tanker in the start of the Iraqi war, offensive langauge was a very big part of that life, as you can imagine, that in no way makes it right but some habits are hard to break, for this i apologize. Please forgive me, in my heart of hearts it saddens me to think that one, some, or all of my fellow hobbyists would think less of me for a few careless unthoughtful words or phrases.

I am sorry and look forward to hearing you all through my squawk box!

Subject: Getting the Most from Your Hand-Held Transceiver

HT Antenna Modification For Increased Performance!
Edited and re-written from an article entitled
"Getting the Most from Your Hand-Held Transceiver"
by
C. Edward Harris, KE4SKY, AEC Fairfax ARES

When limited to "barefoot" operation, with a "rubber duck", HT antennas are not very efficient nor adequate for communications. They fail miserably as an effective radiator due to their design! They are nothing more than an extended dummy load acting as an antenna! The following modification will help you to make the most of your HT by increasing the factory antenna's efficiency and the cost is just a piece of wire!

FACTS ABOUT HT ANTENNAS

The National Bureau of Standards tests of Public Safety high band and amateur 2-meter antennas indicate that a "rubber duck" has -5db, "negative gain" compared to a quarter wave held at face level. In terms of effective radiated power (ERP), this means that a 5 watt HT with rubber duck, radiates only 1 watt. Operating an HT on your belt results in another -20db attenuation, reducing ERP to 50 milliwatts! That's 1/20 of one watt!
UHF results are no better...

Due to the design of the factory installed HT antenna, you are effectively missing half of the antenna!

MODIFY THAT HT ANTENNA FOR BETTER RESULTS
Get ready to use that scrap of wire you have in your junk box!
A simple, inexpensive and effective method to improve a "rubber duck" antenna is by adding an external counterpoise or "tiger tail" thereby adding the other "half".

It should be noted that if your HT is under warranty, the internal modification may void that warranty...you have been warned!

Adding the other missing "half":
You can easily build one from a quarter-wave piece, (about 19.5" on 2m, 11.5" for 220 and 6.5" for 440), of stranded insulated wire, crimped and soldered to a battery clip or use a small spring tension clip that will fit the BNC antenna connector with the wire attached to it. Use a clip or other connection that fits tightly but can be removed if needed. It must make both a good mechanical and electrical connection.

Another method would be to attach the end of the wire by soldering it to a grounded portion of the circuit board inside the HT, although this may not be practical with some models, or any point that is at ground potential on the HT such as the "ground" side
of an external speaker/headphone jack, the BNC connector at the antenna, or the Negative side of the battery terminal. The preferred location is at the factory antenna base at the BNC connector. If you have some other type of metal antenna connector the same applies.

Many of the newer models don't lend themselves to internal modifications easily. If the "rubber duck" antenna that came with the HT does not come off, then you will have to make the connection inside the HT to a grounded point. Extreme care must be taken to prevent shorting out other components!!!!!! Use insulated wire. You may have to drill a small hole in the case for the exit point of the wire and tie a knot inside to provide strain relief. Each installation will be different. Use your own judgment!

Always reinforce the soldered connection with heat shrink tubing or tape to resist flex and shorting to other components if
possible.
When the counterpoise, (the other half of the antenna), is clamped to the outer collar of the BNC connector on your HT antenna, it helps to prevent RF from coupling with your body, so your completed HT antenna "system" acts much like a center-fed dipole instead of an end-fed dummy load!

You just built a directional antenna and did not know it!
In marginal conditions, extending the counterpoise horizontally and pointing your hand to steer the radiation pattern where you need it, produces a dramatically stronger signal than letting it "droop" towards the ground. Experiment with the angle of the counterpoise to get the best results. In effect, you are creating a form of "V" type center fed vertical dipole with a bit of gain compared to just the factory installed antenna.

If you want to buy another HT antenna, rather than add the counterpoise described in this article, then it is recommended that you shop around. Don't be misled by the cheaper priced antennas. Buy from a reputable dealer that will answer your questions. Try to find an antenna with published gain figures compared to a dipole or 1/4 wave vertical. Don't expect Yagi or similar performance....have fun and get better performance than you were!

From: Mike Sherrod
Topic: 3715 Message: 3715

Ryan,

Some old habits done in the military are hard to break but many must be corrected so that one can acclimate back into the civilian world. HAM radio people are a unique breed and we pride ourselves in our non-offensive behavior. That is one of the things that separates us apart from other groups. Believe me, I do understand as I can remember when I was released from active duty in my first enlistment in the Marine Corps coming home and asking my mother to pass the G--D--- butter one night at dinner! I didn't even give it a thought as it just came out because for the previous three years in the Marines, that was considered normal conversation. Well, my father, who was at the time, an active duty U.S. Army Colonel just about knocked my head from the dining room to the back porch with his glare. I corrected my self immediately and from that point on, I was a bit more careful about what I said. Eventually, it was never a problem again.

I think your email to the TARC membership alone speaks for the type of person you really are and I believe you handled the situation in the proper manner. Well done, Ryan.

So, Ryan, don't worry about. It will go away on its own if you just think a bit before you speak. I do look forward to visiting with you on the airways of HAM radio soon and I hope you become a very active member of TARC.

Ryan,

One of the greatest things a man or anyone can do is to say I am sorry and you said you were sorry at least four times. I think that is great and I am grateful you are with the fire department and also a ham radio operator. I did not hear you use any language that I have not heard someone use at the big M. In fact, and I am not proud of it, I have used a bit as I have gotten older....guess I have less inhibition about what I say since I can't be fired. Now, I do not knowningly use any kind of frightful language around the wife, kids, or grandkids....cause I don't wanna teach them something that's not good. Thank you for the apologies.

On a lighter side....I saw something in the Telegram today and it might be a good course for you and me to take before it ends in October. And, a good course for others to take also....and you know who you are.... Here is the invite to it below.

73,
Gordon

FYI

-------- Original Message --------

For only $625.00 dollars you get a like new Icom IC-91AD
FM / DSTAR dual band portable radio with Speaker Microphone
and DC Power cable. The original box, charger, and packaging
are included.
Giga Parts has the IC-91AD listed at $449.00 and the
CP-12 Power Cable goes for $36.00 plus the
HMN-131 Speaker Microphone, a $32.00 value.

[Moderator comment: Icom is replacing this radio with the IC-92AD. Google it.]

Then there is a Mirage BD-35, dual band portable rf amplifier - a
$169.95 value.
This power house delivers 45 Watts on 2 Meters and 35 Watt on 70 CM.

There is more. This offer includes the control software and a
USB to Serial port adapter with driver software, plus an SMA to BNC
adaptor and
2, NMO mount antennas, one for 2 meters and one for 70 CM.

This is a package deal worth well over $800 for only $625.00.

I hate to sacrifice this radio, but books and tuition have to come
first.

3730. Expo Center parking lot for Ham Expo (important)

Yahoo group: Temple_ARC
Date: 2007-10-01 23:14:58 UTC
From: Myron Mesecke
Topic: 3730 Message: 3730

Due to the renovations that are ongoing at the Bell County Expo Center only the main large door next to the TARC tables will be usable for vehicle traffic into and out of the Exposition Building. The right hand front door and the side door are blocked by temporary chain link fencing. The doors can be used for ventilation but not for entering or exiting the building.

Pedestrian traffic through the side door will not be possible at all due to concrete forms and rebar being installed on the side. Limited pedestrian traffic through the right hand door may or may not be be possible. There is currently a gap in the fencing where people could walk but this may change by this weekend.

A few of the closer parking spaces are also unavailable but this should not cause a big problem as long as all the RV's and trailers park on the side.

There is dirt in front of the usable door which will mean a dusty entrance.

Please help get this message out any way you can. Message boards, Websites, Radio nets, etc.

Weather is looking fair for the weekend. Cool front coming but rain changes aren't high. Temperature in the upper 80's.

3733. Expo Center update

Yahoo group: Temple_ARC
Date: 2007-10-02 23:01:07 UTC
From: Myron Mesecke
Topic: 3733 Message: 3733

Talked to the Expo Center this morning. Both front doors are supposed to be usable for vehicle traffic by Friday. Not sure yet if the side door will be usable by quitting time on Saturday. We can still open them for ventilation.

The temporary fencing will be sticking out from the building into what were the driving lanes in front and on the side. Because of this the parking spaces go right up to the fencing. Obviously this will be a disaster if people park without leaving lanes. I will see about somehow marking lanes with marking paint or some other way. Whoever gets to the Expo Center first on Friday needs to make sure no one is parked too close to the fencing. Lanes probably need to be at least 25 feet wide.

Spread the word. Thanks.

Just a short note of thanks to everyone who was able to help out this weekend! There were so many who contributed I wouldn?t have room to name everyone.

Though this year?s Fall HamExpo posed some unique challenges due to the construction, the unseasonably hot and humid weather plus a very busy weekend at the Expo, nothing seemed to dampen the enthusiasm of the 1500 attendees. I don?t know how many hams stopped to tell me how much they appreciated the Temple Amateur Radio Club for their ability to put on this friendly gathering.

It?s great seeing all of us pitching in and pulling together in one common goal. That?s what makes TARC a very special amateur radio club and when you see Darwin K5DOA, Myron N5TFK or Mike WA5EQQ, you may want to let them know that their efforts, as chairs for this event, are very much appreciated.

Need also to let everyone know that Ken's KD5OGL friend Thelma, who organize the REACT concessions at HamExpo, is doing better. She took a real nasty fall on Friday afternoon and wound up in ER with a broken nose, broken arm and lots of abrasions. You may want to keep her in your thoughts and prayers as she heals up.

Thanks
Tom

Just a note to say "THANKS" to Darwin for his excellent classes
helping to prepare for the "extra" level test.
Thanks for your time, handouts, and devotion.

The classes were a great help.

Tom , Let me applaud you and the group for once again providing the finest HamExpo in Texas . In spite of the construction , heat and diminished crowd , the gathering was all anyone could ask for . I personally enjoy walking thru the displays and marveling at one man's junk as several more are bidding against one another to claim it. I am always dissappointed with some of my fellow hams when I see the out side area sprawl out and consume more and more area and the interior exhibits decline . On more than one occassion I have passed claiming a treasure in the parking area as I reserve my funds for the inside venders . It's about all I can do to assist you in selling your inside display areas. I have no idea if you can , but do you suppose the organization upon reciept of the building could claim the fans itself . Prior to allowing vendors , place each of the fans in strategic positions to assist each other in cooling and circulating the air in the entire area and then mark them " Hands Off " . Just a suggestion for the box . Tnx again for what each of you do for our Ham Community Chuck Wq5B

Joe
Thanks for providing this service to the Ham Community at the TARC Belton HamExpo.

I had a couple of guys who stopped back at HamExpo after taking the test to let me know that they had passed. Sure is a good feeling to see these guys accomplish something that they set their sights to!

Thanks Again Joe and thanks to all the VE's who helped out,
Tom

2007 Session in Conjunction with the TARC Hamfest...

We had 22 people take the tests yesterday?

8 earned a Technician License
4 earned a General License
6 earned an Extra License? (This will be a record hard to beat and had the VEs grinning ear to ear?)

The VEs assisting in this session were:

KD5VIJ Tom Brennan
KE5NWG Michael Hankins
N5ZXJ Gerald Richmond
WB5PBS Mike Sherrod
W5ANW Ross Gregg
W5GNK Jan Gregg
W5MIK Mike Rhoden
W5VEX Joe Dorn
W5WRE Ron Thompson

Since the VE test group was formed about a year ago we have had the following results?

52 have earned Technician
22 have earned General and
14 have earned Extra
16 left the sessions with no upgrades or new license

This is a total of 104 for the year?

Of especial pride is the four candidates that required special assistance, one of which went from no license to Extra during the year (including code) and is now one of our VEs?

Thanks to all of the VEs that have assisted with a special thanks to Mike Rhoden W5MIK, for making the Belton facility available to us and the Temple Amateur Radio Club for bring the candidates into the area?

Have Ham Tests, Will Travel!!!

Have Gun - Will Travel was an early western TV show that followed the adventures of Paladin, a gentleman-turned-gunfighter (played by Richard Boone), who preferred to settle problems without violence, yet, when forced to fight, excelled. Paladin lived in the Carlton Hotel in San Francisco, where he dressed in semi-formal wear, ate gourmet food, and attended opera. In fact, many who initially met him mistook him for a dandy from the East. When working, he dressed in black, used calling cards and wore a holster which carried characteristic chess knight emblems, and carried a derringer under his belt. The knight symbol is of course in reference to his name ? possibly a nickname or working name ? and his occupation as a champion-for-hire (see paladin). The theme song of the series refers to him as "a knight without armor." In addition, Paladin drew a parallel between his methods and the chess piece's movement: "It's a chess piece, the most versatile on the board. It can move
in eight different directions, over obstacles, and it's always unexpected."

Chuck
There was a lot of "huddling" going on about the fans. The Expo Center has 16 fans of which 5 are in need of repair which left 11 fans for 4 events. HamExpo managed to get hold of 6 fans for our attendees. You are correct, once the vendors get hold of a fan, you may take your life in your hands trying to retirve it and get it placed in a more equitable position. You make a good point!.

You are also accurate about the parking. This weekend it might have been better to be outside, since it seemed to be a little cooler and breezier outside. Many times that is not the case. Texas weather can be fickle. We also try to get a donation of $5 from the outside "TailGators" who are selling which makes it a little more equitable for everyone, inside and out.

Appreciate your comments and any suggestions on what we can do to make this event a little better for everyone, are most welcome.

Thanks Again
Tom

3750. HamExpo Raffle Winners!

Yahoo group: Temple_ARC
Date: 2007-10-12 00:38:28 UTC
From: Tom Olsen
Topic: 3750 Message: 3750

In case y'all were wondering,
the winners of TARC's Belton Fall HamExpo Raffle were:

3rd Prize
Icom IC 91AD HandiTalkie went to Danny Thornton KD7HAM of Livingston TX
2nd Prize
Kenwood TMD710A Mobile went to George Yeary KC5PEV of Richardson TX
Grand Prize
Icom IC 2820A Mobile DStar went to Pete Sauermilch KD5QPX of Sugarland TX

Both Danny and George were on hand to claim their prizes. I FedEx'd the IC 2820 to Pete on Tuesday and he should be playing with DStar by the weekend.

Thanks to all who attended and especially those who participated in the raffle! These were great prizes. One vendor, The SignMan of Baton Rouge LA, who has attended every Belton HamExpo since the very first, was "wondering" how much the raffle tickets might be? He bought $100 worth! The raffle guys, Dale and John sure were happy about that! When you need these type of Ham supplies, you may want to consider supporting those generous vendors who help support TARC.

3751. Knwd TH-F6 Programming Notes

Yahoo group: Temple_ARC
Date: 2007-10-12 17:25:52 UTC
From: Charlie Schlieper
Topic: 3751 Message: 3751

I recently purchased a Kenwood tri-band HT (TH-F6A), which has 2m, 222MHz, and the 70cm bands. The TH-F6 has 400 memories, so I wired up an adapter cable for one of my dual-port homemade programmers, to change the mini 6-pin DIN to two separate 2-1/2 and 3-1/2mm cables. My first attempts to get my homemade programmer working failed, and I'd like to share the reason why.

Page 46 of the radio manual shows an interface to peripherals sketch-- which can be misleading. It has the ring of the small 2-1/2mm plug going though a level converter block, and then connected to RXD. Likewise, the shield connection of the 3-1/2mm plug is shown going to TXD. This could lead you down the wrong path in wiring up your own programmer!

It is simply reversed for the connections needed, as it doesn't show the logical differences in "INPUT" and "OUTPUT" of a Level Converter, but was intended to be a simple block diagram of the overall process. The RING of the 2-1/2mm plug actually goes to TXD of your level converter, and the SLEEVE of the 3-1/2mm plug goes to RXD.

Apparently, I am not the only one discovering this, as PT2RFL, Rubens Fluza Lima, has an article on mods.dk which explains this. Wish I had read the article first, instead of spending several hours troubleshooting my cable adapter.

By-the-way, the EMS-42K rapid charger, and 3600-mAH battery are both improvements I appreciate.

ENJOY HAM RADIO!
Charlie, N5TD

3753. Jamboree on the Air! October 20th 2-5pm Copperas Cove Muni Park

Yahoo group: Temple_ARC
Date: 2007-10-13 14:04:46 UTC
From: Tom Olsen
Topic: 3753 Message: 3753

It's Jamboree Time!
Here's hoping that we get a good turnout to help the Scouts learn a little about Ham Radio. We would like to set up 4 portable stations or so to cover the bands. There is a building/shed with electricity on site. Two stations have previouisly operated there. The other stations have been outside under the trees and kicked back and enjoyed the nice October weather.

If needed we, can also bring along the club 2K Honda generator.

This event is a nice treat for the Scouts, good for the soul, and a nice venue for demostrating amateur radio to some nice kids on their own turf!

There will be upwards of 50 scouts camping out. Even if you don't setup an HF portable, just bring your 2m HT and spend a little time. A few hours of your time, might make a lifetime memory for these kids.

I will definitely be able to attend for sure, and I will bring my HF station and be prepared to set it up. I need to know exactly where at the park we will be located, how soon do we need to be there, and if we are going to use any of the club's antennas. If we need to build dipoles then I will be prepared to bring what's needed for a dipole for my station to configure for an inverted-V, a Windom, maybe a triangular loop, or a regular flat dipole. I'm also considering bringing my Diamond X30 2m/70cm base antenna. Any help on the needed info would be great!

Also, is anyone taking pictures for the event? If so, I would love to get copies of those photos so I can make special QSL cards celebrating the event!

From: Tom Olsen
Topic: 3757 Message: 3757

Just heard back from the Scouts, looks like they are looking forward to TARC being there on Saturday afternoon. Should be a lot of fun. The Copperas Cove Municipal Park is located off Ave B (north side of tracks) in Copperas Cove. We will be in the back part of the park. The Scouts will be camping out.

Thanks to everyone for their help. Even if you can't physically make it out to Copperas Cove to help out, it sure would be nice if you to listen up on the repeaters and HF Bands on Saturday afternoon. Might find yourself talking to a happy kid from CC.

This is also an invite to all the "adult" hams in KIlleen, Copperas Cove and Lampassas, to stop on by. The kids are fun and very appreciative!

3759. Lithium Backup Batteries...

Yahoo group: Temple_ARC
Date: 2007-10-22 20:34:34 UTC
From: Charlie Schlieper
Topic: 3759 Message: 3759

I just replaced my first CR1220 lithium battery in my older Compaq laptop computer. I was lucky. I had just stocked one CR1220 a week earlier, when I discovered that three of my Kenwood dualband radios (TM-733) used this battery. My laptop, like most desktops, had a convenient socket, which made it an easy replacement.

The symptoms? CLOCK TIME... At first, the computer clock began loosing minutes, then hours, and finally was loosing days when it was shut down. The old CR1220 CMOS battery was dated 1996, eleven years old, and measured only a small fraction of a volt. It was obviously time for replacement.

Getting into laptops can be challenging, if not downright difficult. Some are straight forward, with obvious screws and snap-ons, but this is not always the case. If you go into your laptop, exercise caution, noting where certain types of screws go. Disconnect any flat cables with care! My Compaq laptop required the removal of one circuit board deep inside, as the CMOS battery was hidden directly under it.

Enjoy Ham Radio!

3760. Ham Radio Thoughts and Questions...

Yahoo group: Temple_ARC
Date: 2007-10-30 04:19:19 UTC
From: Warren Rowe
Topic: 3760 Message: 3760

Some thoughts on my mind that I thought I would share here on the reflector...

Tried the rain gutter antenna project that I mentioned to those in attendance at McDonalds last Saturday...didn't work out at all. Too much paint on the gutter which covered the areas I needed to use to connect properly. Also tried a dipole NVIS-style...too much noise from nearby mercury lights that looked to be older than I am (43 years and counting slowly).

Anyone out there use an MFJ-1622 or MFJ-1625 apartment/balcony antenna? I'm looking at purchasing one from MFJ. Yes, I know they won't replace a Yagi or full-wave dipole or inverted-V, but all the reviews I've read in QST and other venues so far say that they work well, given what they are. I do plan to use a low-pass TVI filter in line with this potential antenna setup, and of course the station will be grounded (I even know where to put the ground rod despite the apaartment complex I now live in).

Speaking of low-pass TVI filters, can anyone elaborate on whether or not using two or even three low-pass TVI filters in series is beneficial? I did experiment with this using two low-pass filters when I was a Tech Plus (15 years ago), and it seemed to work at least well enough that I didn't knock out my own TV sets on 10 meters phone and 40 meters CW...but that was only a temporary experiment.

JOTA was a lot of fun; if you weren't there you missed a great time! There were a lot of Boy Scouts that had a true interest in ham radio, and there were three or four Scouts who really knew how to use a microphone! (Experience with FRS radios really seemed to provide some good training in that area.) I can't wait until next year's event, and I would like to see a little bit more done out there.

The elections for TARC officers is this Thursday. If you're a member of TARC, you need to be here to vote for who you want to be in office for 2008. For those who plan to be there, vote your conscience and be true to yourself when you do it. I'm sure that whoever is elected, the incoming officers will do a very nice job in 2008.

See all of you on Thursday!

From: n5pmk_randy
Topic: 3762 Message: 3762

Hello all, just wanted to say that the Belton fest was great again this year, but I didn't find quite what I was looking for with the amount of money I had to spend. Isn't that always the way it is? Anyway, I found a posting for the Austin Radio Round-up in Decemeber and it's advertised as a 2 day event. I'm wondering if anybody has been to it and how a good an event it is as compared to the one in Belton. I'm looking to pick up another Hf station, complete. Radio with AT, power supply, the whole ball of wax.Anyway, if anyone has any input on the Austin show, please, let me know how it is, thanks,

Randy

Subject: [TARC] Re: Jamboree on the Air! October 20th 2-5pm Copperas Cove Muni Park

I will definitely be able to attend for sure, and I will bring my HF
station and be prepared to set it up. I need to know exactly where
at the park we will be located, how soon do we need to be there,
and if we are going to use any of the club's antennas. If we need to
build dipoles then I will be prepared to bring what's needed for a
dipole for my station to configure for an inverted-V, a Windom,
maybe a triangular loop, or a regular flat dipole. I'm also
considering bringing my Diamond X30 2m/70cm base antenna. Any help
on the needed info would be great!

Also, is anyone taking pictures for the event? If so, I would love
to get copies of those photos so I can make special QSL cards
celebrating the event!

It's Jamboree Time!
Here's hoping that we get a good turnout to help the Scouts learn a little about Ham Radio. We would like to set up 4 portable stations or so to cover the bands. There is a building/shed with electricity on site. Two stations have previouisly operated there. The other stations have been outside under the trees and kicked back and enjoyed the nice October weather.

If needed we, can also bring along the club 2K Honda generator.

This event is a nice treat for the Scouts, good for the soul, and a nice venue for demostrating amateur radio to some nice kids on their own turf!

There will be upwards of 50 scouts camping out. Even if you don't setup an HF portable, just bring your 2m HT and spend a little time. A few hours of your time, might make a lifetime memory for these kids.

3776. 2007 ARRL Field Day Results Posted...and A Friendly Challenge to All

Yahoo group: Temple_ARC
Date: 2007-11-04 13:38:16 UTC
From: Warren Rowe
Topic: 3776 Message: 3776

I've just noticed that preliminary results from this year's ARRL Field Day have been posted. You can find them by going to the ARRL's North Texas Section webpage at http://www.arrl.org/sections/?sect=NTX and then click the 2007 Field Day Scores link.

Obviously we at TARC did well. We didn't "win" in the 2A class, but we did do better than some of our compadres such as the Heart of Texas ARC/Texas State Guard ARC and the Austin ARC, but all three groups made a nice showing. Congrats to all clubs and groups in the NTX section who participated and turned in their entries.

Now I ask a question for all of you: What can we do at Field Day next year to make the event better for all who participate, as well as at other events that TARC members participate in?

There's a lot more we can do. Obviously more operators at FD would be helpful. We could have used a few more on the phone bands this year. Maybe some digital work could have been done. Maybe a Yagi or two for 6 and 2 meters and maybe even one for 70 cm. A small foxhunt for those who have some curiosity about radio-direction finding? Maybe. A alternate-power station such as solar or bicycle power? Possibly. The possibilities are truly endless; what do you have in mind? What could YOU suggest?

Also, what could we do to enhance our communications and personal experiences at other venues such as the Belton 4th of July Parade, JOTA, contests, and etc? What could we do that we haven't tried before? What should we change that would streamline things and make it all better? Think about it.

Now I have something for all of you: I have decided to issue a friendly challenge to all of you in TARC and others on the reflector here. Let's make the 2008 version of Field Day really special. Let's attempt to do things that will help to improve the Amateur Radio community in Central Texas more visible and more ready to respond should a significant event occur. We can certainly learn from the experiences we undertake at Field Day as well as throughout the year. But I do NOT want to hear or read the phrases "WE CAN'T" or "WE SHOULDN'T" in any shape or form. To remain stagnant or even fall backward does no good for the Amateur Radio community at all, and I will admit that is totally unacceptable to me, period; I am quite sure there are others who feel the same way.

So what do you say, everyone? Let's make 2008 a year we won't forget in the Central Texas Amateur Radio community; let's get out there and make a real difference. Field Day is an obvious example; there are

many others out there. My friendly challenge to all of you has been issued...how will YOU respond, or WILL YOU RESPOND AT ALL? We have the expertise and the desire; we just need to get out there and DO IT.

73 to all, and I look forward to serving TARC in 2008.

From: Tom Blackwell
Topic: 3784 Message: 3784

Have you voted in the ARRL election?

For those who have not, time is limited.

Please consider this:

3785. Relay question RWH-SH-112D

Yahoo group: Temple_ARC
Date: 2007-11-12 16:17:33 UTC
From: Benton Goodnight
Topic: 3785 Message: 3785

Dear Fellow Hams,

First off for you guys who have or are faithfully serving our country, thank you. We owe you and God our freedom.

Next, I am searching for a relay. I know some of you guys work on other things besides radio equipment so I was in hopes that someone out there may have a resource to help me. I am looking for a relay for a gate opener that I am using at my house. The gate quit opening, but I can tap the relay and it will start up. The relay is a Goodsky RWH-SH-112D. It is smaller than one inch square, sealed in plastic housing. I found a description on line, it is a single pole 12 volt relay. Probably not a real expensive deal, I just haven't found the source for it. I would just send the circuit board back to MightyMule, but they do not offer any repairs. Another fine example of our throw away buy another society. The only problem is I can't stand to throw away a $600 item with a simple problem like this.

I appreciate any help or comments.

Again, thanks Veterans!

Benton

3786. Christmas Parade

Yahoo group: Temple_ARC
Date: 2007-11-12 16:14:52 UTC
From: Warren Rowe
Topic: 1044 Message: 3786

I will be able to help out with the Christmas parade this year. Since my XYL Mary (KD5OGD) will be helping out with one of the parade entries and will likely be in the parade in that capacity, I can easily participate in TARC's effort this year.

It's a great event, and I have enjoyed helping out over the years; I am really looking forward to doing it again in 2007!

3789. N3FJP Weather Spotting Software

Yahoo group: Temple_ARC
Date: 2007-11-13 04:21:29 UTC
From: Warren Rowe
Topic: 3789 Message: 3789

Here's something new that many of you may not be aware of...

Scott, N3FJP, has come up with something new for the storm spotter. It's called WxSpots Log. It's now in version 1.3, and it's free to download and use. You can configure this program to show reports in many different variations or forms, and you can even chat with other reporting stations as needed. This program seems to be meant for spotters at home locations, but could be used for those mobile spotters who have wireless Internet access.

There's more to this program than I can describe. I downloaded WxSpots Log this afternoon and I plan to play with the program quite a bit and see how it all works. If you're interested in trying it, download it and play with it and see what you think. It could potentially be a useful tool for keeping an accurate log of weather reports in the area, especially if a net control station is trying to keep up with severe storm reports.

Let me know what you think about WxSpots Log if you try it.

Warren, WR1TX

Maybe I should have mentioned the website for this software:

http://www.WXSpots.com/

Or, go to Scott's main web page and click on the link there.

3792. TARC Christmas Holiday Banquet - Wildflower CC 6:30pm Thur Dec 6th

Yahoo group: Temple_ARC
Date: 2007-11-14 16:13:03 UTC
From: Tom Olsen
Topic: 3792 Message: 3792

Just want to remind everyone about the annual TARC Christmas Dinner! This is always a special event for everyone. As last year, this event will be held at the Wildflower Country Club . We will start the pre-dinner mingling and music at 6:30 pm and have dinner around 7pm. Mostly everyone dresses up a little which helps make this event special, and though I hesitate to say the guys dress semi-formally, we probably do.

We will having a two entree buffet, featuring Roast Beef and a Fish Entree. Hope that will work for everyone. If there is any dietary restrictions, just let me know and we will do our best to accommodate.

The cost for members is still $5 or $10 per couple. If you have children they are also very welcome.

To better prepare, we need to get an approximate head count for Wildflower CC. If you have not added your name to the list, please do so as soon as you can. Last year we had 60 folks attend and are thinking along the same lines this year. You can reply to the reflector or email Tom or Darwin.

If you know you will be attending, we would like to hear from you.
If you think you might be attending, we would also like to hear from you.

Thanks and hope to see everyone there. It's a nice way to start the Holidays.

From: Carolyn Black
Topic: 3794 Message: 3794

TSGARC Emergency Communications

Effective 14 November 2007 our club will use the following procedure during both routine and emergency operations:

Normal monitoring

PRIMARY
W5TSG Repeater 147.320 +123 tone

Simplex 147.550

EMERGENCY BACK-UP
N5ZXJ Repeater 145.310 +123 tone

DIGITAL & SLO-SCAN

W5NCD Repeater 147.240 +97.4 tone

· This repeater is presently in the digital mode. If you are analog and cannot get a repeater “Tail”, it simply means the repeater is in digital. To operate on this repeater please execute the following with your mike depressed:

1- enter (1*) this will turn the repeater to analog

2- enter (1#) this will return the repeater to digital

Remember these repeaters are here for everyones’ use and we must maintain proper protocol on all of them.

Just a word about the digital repeater; this repeater is in the experimental stage in that is will be monitored on “D-STAR” digital for now during normal hours. The slo-scan nets will operate on analog as usual Sunday thru Thursday between 9-10pm and on Tuesday 8:30-10 pm ham forum.

Please note these changes on your operating rosters.

I attended the planning meeting for the parade this past Thursday. Things are pretty much as they were last year. There should be additional orange cones to supplement the street barricades on the side streets. Joni Lange is the representative for the Red Carpet Ambassadors. She and I would like to have a planning meeting the week prior to the parade to establish roles and duties between the Red Carpet Ambassadors and TARC. We want as many RCA and TARC volunteers to attend this meeting as possible. She was thinking about a lunch time meeting. This may not work for everyone so please make suggestions as to date and time. I'm not making any guarantees though.

Monday November 26th the line up meeting for parade entries will be held at the Mayborn center at 6 p.m. I think it would be beneficial for all the TARC volunteers to attend this meeting. This meeting is where the entries receive the regulations for the parade. By TARC being there we will know what instructions the entries have and it may make our job easier during staging.

One change is we want the parade entries to apply their entry number over the drivers side headlight before they enter onto 8th street. This will make our jobs easier as we will be able to look up there number and know who they are and where they belong as they are approaching each of us rather than having to wait till they are along side us.

There should be additional porta potties on 8th street.

Joni Lange is hoping for around 10 RCA volunteers. Right now I have about 6 TARC volunteers confirmed.
Warren Rowe, Tom Olsen, Bill Killebrew, Hal Pagel and Steve Stickley. There may be some I have forgotten. If you will be working the parade please email me so I can add you to my list. If we can get 12 TARC volunteers we should be able to cover everything.

I will have TARC's orange vests on hand for everyone to wear.

I will post updates as I get them.

Myron, I doubt I can make the planning meeting between the RCA and TARC due to work, but I should be able to attend the line up meeting for parade entries on Nov 26. However, if there's anything extra I might be able to do to help just let me know by email or by phone (cell 254-231-5354).

From: Warren Rowe
Topic: 3801 Message: 3801

I'm looking to try working a few contests in 2008, and thought I would post here to see if anyone might be interested in doing the same. I'm looking at some of the state QSO parties, especially the Texas QSO Party which is always held in September, and maybe a couple of the major contests sponsored by ARRL and CQ Magazine. I would like to be involved using the TARC club call if possible, but there may be one or two where I would much prefer using my own call (CQ's Worldwide Prefix Contest being one due to my unique callsign prefix - WR1).

Drop me a line if you would like to try doing this next year, and we will begin planning soon after the holidays are over.

From: Warren Rowe
Topic: 2758 Message: 3803

As some of you may be aware, I have begun a modest stamp collection. Philately is an interesting hobby; one can learn about a country's history, culture, and people through collecting stamps. This is a bonus if you're a DXer!

Anyhow, I am working on my collection which will highlight stamps with Amateur Radio as one of the themes (nursing will be another). I'm hitting eBay pretty hard with some success, but I could use some more help. If you know of anyone that possesses stamps with Amateur Radio as the theme and would like to part with such stamps, I would be very interested. Nothing glued on envelopes or paper, just the stamps themselves; they must be in good condition.

Any help would be sincerely appreciated!!!

Glad to see the are other club members interested in contesting. I'm building a contest station near Holland. The construction of the towers is well under way and the antennas will be going up soon. More details on the web site at:

Subject: [TARC] Anyone Want to Contest in 2008?

I'm looking to try working a few contests in 2008, and thought I would post here to see if anyone might be interested in doing the same. I'm looking at some of the state QSO parties, especially the Texas QSO Party which is always held in September, and maybe a couple of the major contests sponsored by ARRL and CQ Magazine. I would like to be involved using the TARC club call if possible, but there may be one or two where I would much prefer using my own call (CQ's Worldwide Prefix Contest being one due to my unique callsign prefix - WR1).

Drop me a line if you would like to try doing this next year, and we will begin planning soon after the holidays are over.

From: N5ZXJ aka TowerMonkey
Topic: 3807 Message: 3807

Reading in Todays Temple paper that we have lost another great ham from the Temple club of many years.

K5BSW - William H. Winburne, 85, of Desoto died Wednesday, Nov. 21, at a Desoto hospital.

Services are pending with Sheffield Funeral Home.

Another very good ham that will be missed.

CHRISTMAS DINNER
hosted by the TSGARC
Everyone's Welcome

Saturday, December 8, 2007

6:00 - 7:00 P.M. SOCIAL HOUR
7:00 P.M. DINNER
ENJOY A BUFFET OF BAKED CHICKEN, ROAST BEEF, MASHED POTATOES, GRAVY, GREEN BEANS, SALAD, HOT ROLLS, ICE TEA, COFFEE AND PEACH COBBLER
$10.00 PER PERSON (tax and tip included in price)

Kim's Party Room, next door to Kim's Restaurant, 2600 Waco Drive. Waco Texas

Dress informally and enjoy an evening of dining and good fellowship with other "hams" and their families.

2 door prizes, $25.00 each during dinner

RSVP Carolyn kd5glm kd5glm16@...
It's very important to get a count for the evening. I'd appreciate hearing from each of you. Thanks so much!

3810. Parade line up meeting Monday at 6 p.m.

Yahoo group: Temple_ARC
Date: 2007-11-26 03:05:38 UTC
From: Myron Mesecke
Topic: 3810 Message: 3810

The line up meeting for the Temple Christmas parade is this Monday, the 26th at 6 p.m. at the Frank Mayborn center. This meeting is for those who registered to be in the parade but it might be helpful to know what instructions they receive. I will be attending and any TARC members who will be working the parade are also welcome to attend.

I realize the meeting time cuts into TARC's regular Monday night net and is also during the 6-8 p.m. visitation at the funeral home for Bill, K5BSW. I will pass along important details of this meeting here on the reflector.

I will either drop by the funeral home before the meeting or after it. I want to pay my respects to Bill. I lived next door to Bill and his deceased wife Nora for the first 9 years of my life. They were like a third set of grandparents to me.

From: Myron Mesecke
Topic: 3812 Message: 3812

There will be a meeting between TARC and the Red Carpet Ambassadors this Friday November 30th at 4:30 p.m. Location is the Temple Chamber of Commerce building. This is at the corner of Central Avenue and N. 5th street.
The purpose of this meeting is for both groups to meet since we will be working together. A few details on working the staging area will be discussed.
Anna Foster from Temple Parks and Leisure and Jim Thigpen will both be attending. The meeting should not last very long. I hope most of us can make this meeting.

On Monday December the 3rd TARC volunteers will meet in the parking lot that is south of the Goodwill store and west of Thomas hardware. We will meet between 2:00-2:30 p.m. The staging area opens at 3:00 p.m. I will post more details shortly.

3818. Friday parade meeting

Yahoo group: Temple_ARC
Date: 2007-11-30 03:08:26 UTC
From: Myron Mesecke
Topic: 3818 Message: 3818

A reminder for tomorrows parade meeting with the Red Carpet Ambassadors. The meeting is at 4:30 p.m. at the Temple Chamber of Commerce. This meeting should not last too long.

On Monday we will meet around 2 p.m. in the parking lot south of the downtown Goodwill store.

It will likely be late Saturday night or Sunday before I can post notes from tomorrows meeting on the reflector. Not much has changed from last year except for trying to be better organized.

The main change is in implementing better control at the intersections. There are supposed to be orange cones to supplement the street barricades located at the sides streets. We want to have two people at every intersection and to never leave the intersections unmanned. A third person on each block can assist entrants to their location.
We need to keep our eyes on the side streets where they intersect 6th street and 10th street to keep out everyone unless the vehicle is in the parade or homeowners. Homeowners are supposed to have a letter from the city as I.D.
People being dropped off with have to walk from 6th or 10th streets to their float.

The parade participants have been instructed that they are to have their entrant number taped over their drivers side headlight before they enter the staging area. This will allow us to identify who the entrants are sooner and direct them to their parking location.

We will go over all this again Monday afternoon at 2 p.m.

3820. Technology Update - Ultracapacitors

Yahoo group: Temple_ARC
Date: 2007-12-02 20:04:53 UTC
From: Charlie Schlieper
Topic: 3820 Message: 3820

For some time now, I have enjoyed showing my Ham friends how small a 100,000µF 5.5V Memory Capacitor is, compared to what most of us would have thought in the past. This particular cap is smaller than a dime and about 1/4-inch thick. It exhibited very low leakage current. It's purpose was closely tied to the use of CMOS memories and microprocessors.

Now, with a new technology called ultracapacitors, a 100-Farad capacitor (low voltage rating), can be no larger than a flashlight battery. Yes, that is 100 million microFarads! Remember telling someone how large a 1-Farad capacitor would be? I do. Times have changed. This new breed of ultracapacitors is also called "ultracaps" or "supercaps."

Large value ultracapacitors, 50 to 500-Farads, can have voltage ratings up to several hundred volts, and are not just limited to low voltage. The applications of this new technology to industry, and the electronics technology field, is already changing how we use capacitors.

Enjoy Ham Radio!
Charlie, N5TD

Neat stuff Charlie. Just before I retired I visited a cap manufacturing place out in San Diego that was building some big ultra-caps for the government. They said the application was to store charge for the next generation of airplane catapults which will use linear motors instead of steam to launch aircraft. That is a lot of joules in a small space.

3822. Last Parade Update

Yahoo group: Temple_ARC
Date: 2007-12-03 00:58:08 UTC
From: Myron Mesecke
Topic: 3822 Message: 3822

Friday's meeting went okay. No changes just touching on a few items.

We will meet tomorrow afternoon in the downtown parking lot to the south of the Goodwill store and west of the Thomas hardware building. Try to be there around 2:30. I will get copies of maps and line up sheets at noon tomorrow so I will pass them out when we meet. If you can't be there that early just show up on 8th street and I can fill you in.

Warren WR1TX is making sure on using Tony's WB5TTY repeater. We may also use 146.52 simplex as backup. Bring an HT with good batteries if you have one. There will be plenty to do that doesn't need a radio and the staging area is only 5 blocks long anyway.

There should be about ten TARC members and 10 Red Carpet members. I identify about 17 locations to have manned so we should be good in terms of manpower.

The staging area opens at 3:00 p.m. City employees will have barricades in place on those streets and intersections that are to be closed. Only vehicles that are in the parade or residents of 8th street are to be in the staging area. No thru traffic is permitted. Also no vehicles that need to drop off parade participants. There need to be dropped off on 6th or 10th streets and walk to the staging area.

To make it easier parking the parade vehicles all entrants need to place their entrant number over the drivers side headlight before they are permitted to turn onto 8th street. Also, entrants need to be reminded to cover their passenger side headlight if their vehicles have automatic headlights. Not everyone will know how to override their cars features.

The east side of 8th street will have the entrants that have even numbers. The west side will have odd numbers. The east side will feed out onto the parade route followed by the west side.

Float judging is at 4 p.m.
Everyone is supposed (ha-ha) to be in there places at 5 p.m.
Everyone is supposed to be ready to move at 6 p.m.
Everyone needs to have their generators running and Christmas lights working by 6:15 p.m.

The last shuttle from the high school parking lot to the staging area is at 5:45 p.m.

A few rules. Any entrant that has riders outside of a vehicle (pickup bed, float, etc) must have walkers at all four corners and be within

five feet of their entrant. They must have their hands free to catch anyone who might fall off. That means no cell phones, pushing strollers, etc.
No drivers using cell phones. They have to pay attention to what is going on around them.
All animals must be on leashes or in cages.
No handing out or throwing anything to the crowd.

Try to keep your senses alert. If you see or hear anything that just doesn't seem right call it in and we will have the police check it out.

Bring something to write with and maybe a clipboard if you have one. Everyone needs to take care of their own drink and snack concerns. It is supposed to be sunny with a high of 65 tomorrow. Of course it will cool off as the afternoon and evening progresses so dress appropriately.

I believe that covers most of it. I will see everyone tomorrow afternoon.

Myron

Forwarded Message

-------- Original Message --------
Subject: [dstar_digital] Austin Texas - D-Star 2m Repeater is up!
Date: Mon, 03 Dec 2007 22:54:23 -0600
From: Jim Trulove <jtru@...>
Reply-To: dstar_digital@yahoogroups.com
To: dstar_digital@yahoogroups.com
References: <1196672392.344.37957.m43@yahoogroups.com>

QST,

The Austin area 2-meter D-Star repeater is operational and the initial QSO was conducted tonite with K3TD in Georgetown, Texas.

The repeater is a project of the Austin Amateur Radio Club in conjunction with the Williamson County ARC. The repeater is currently at a temporary location near the intersection of US 183 and RR 620/Texas 45 on a 5dBi omin-directional at ~260 ft. AGL and the antenna is situated on the East side of the tower. Po to the feedline through the duplexer is approximately 19 w.

The AARC is sponsoring the Radio Roundup hamfest this weekend at the Herman Sons lodge near Decker Lake, which is just east of Austin. There will be a D-Star special interest display at the hamfest, with a D-Star demonstration for interested amateurs. For more information, please consult http://www.austinhams.org/ -- follow the Austin Radio Roundup link under the masthead to get details and directions.

In the near future, we will be moving to our permanent site near Parmer Lane and IH-35 and adding 70cm and 23cm voice repeater and 23cm digital data modules. At that time, the gateway will be incorporated and we will be able to support communications to and from remote repeaters on the D-Star network.

The repeater call is W5KA (C-module)
The repeater output frequency is 146.48 MHz (+ 1.000 MHz split)

If you are able to make it to the hamfest this weekend or are able to visit our fair city in the future, be sure to check us out and say "howdy" - D-Star digital mode.

'73,

Jim Trulove

Dear group members,

I have just returned from the Austin Radio Round-Up. What I attended could best be described as a flea, not a Ham Fest. I guess I've become spoiled to the quality of the Belton event.

Anyway, I'm looking to piece together a new HF station. When I say "new", I mean new to me. I'm looking for an older radio, my preferences are Kenwood models, TS-130, 520SP,830S, or an SP-180. Good working order is a must. I'm watching several on E-bay, but I'd rather buy locally if I can. If anyone has anything like this, please, feel free to conatct me. Thanks all,

Randy (N5PMK)

HY RANDY

TODAY MIGHT BE YOUR LUCKY DAY
I HAVE A KENWOOD TS-570D HF RADIO
I AS THINKING ABOUT SELLING IT IF YOU WOULD
BE INTERESTED .
THE RADIO WORKS GREAT 100 WATT ON ALL BANDS
IM ASKING $570 FOR IT..
I ALSO HAVE A ASTRON RS-35A POWER SUPPLY FOR $125
I ALSO HAVE A RADIO SHACK POWER METER CAT NO.21-527
THIS METER IS DIGITAL READ OUT AND PEAK READING $35
I NEED A LITTLE MONEY FOR CHRISTMAS!!!!

Thanks for the offer Sam, but that's a little out of my range. As I said, I'm looking for an older rig, something more affordable. But that is a great price for that rig.

Good Evening Randy.

I have a Kenwood TS 850 w/ pwr supply that belongs to my daughter and has been in storage for about six years. There are no scratches and has been cared for. Hand mic is missing. Daughter, who has just moved, says it is in a packing box somewhere. I am the original purchaser (still have the bill of sale).

Asking in the range of $625 w/ pwr supply.

If you are interested contact me directly by e-mail.

73, Roy N5HQR

3836. HF Rig

Yahoo group: Temple_ARC
Date: 2007-12-10 22:34:08 UTC
From: n5pmk_randy
Topic: 3836 Message: 3836

First off, thanks to everyone who responded to my inquiry. Once again I've found that this is the site for help on anything ham radio. Next, I am now the proud new owner of a Yaesu FT-1000D, complments of W5NCD, Larry from Waco. I'd like to say that I bought it from him, but in reality, it was more like a donation on his part. There's no way I could have been able to buy a rig as fine as this one, it's like brand new right out of the box. If I ever part with this rig, it will be as I received it. It will go to a ham in need of a radio, with the same love for the hobby I have, and it won't be for a profit. Thanks Larry, and thanks to all those who responded,

Randy N5PMK

From: Randy Friesenhahn
Topic: 3849 Message: 3849

Hello
It is with great sadness I write to the TARC reflector tonight. John Wayne Massengale formally KA5EUE passed away at about 3:00 PM on December 24, 2007.
John had been in involved with many TARC activities in the 1980s and was a great all around guy. John loved HF and had spoken about getting active again to take on the adventure again in the coming sunspot cycle. For those that can remember John he will be remembered for his knowledge, as well as his willingness to volunteer to help out a fellow Ham. But for those of us, who knew him best, he will remember him for his love of the Hobby and his big heart.

From: Tom Olsen
Topic: 41 Message: 3862

All,

Please bring your latest addition to your Ham equipment you
received or purchased this last year to the January TARC meeting to show it
off. I would hope a number of you were visited by Santa or one of his
helpers in December. Do not worry about size or cost whether large or
small and give us a short review on your prized possession. All Hams like
to hear about new equipment or gadgets and have input from other Hams prior to
purchasing any new additions to their shacks. I would assume all reviews
will be good.

See you Thursday night.

3870. [Fwd: [austinhams] City of Austin BPL Ends, No Deployment]

Yahoo group: Temple_ARC
Date: 2008-01-10 01:14:58 UTC
From: Steve S. Bosshard (NU5D)
Topic: 3870 Message: 3870

-------- Original Message --------
Subject: [austinhams] City of Austin BPL Ends, No Deployment
Date: Wed, 09 Jan 2008 18:59:51 -0600
From: Glen Reid <k5fx@...>
To: austinhams@yahoogroups.com,TEXASBPL@...,
bpl-local@...,texashams@yahoogroups.com
CC: w1rfi@...,kj5rm@...

The BPL trial by the City and Austin Energy, in east Austin, has ended. Mr. Pete Collins, CEO of the City Telecommunications Department, reported that BPL test did not meet the City's expectation and there are no plans deploy it on the AE grid. The test produced disappointing results in the areas of data throughput, installation/maintenance complexity and cost benefit when compared to both RF and fiber networks.

In his report to the City Telecommunications and Emerging Technology Commission, Pete stated that BPL test network demonstrated:

☐ "speed fluctuated from 250 KB/s to 750 KB/s"

☐ "download function performed at the lower rate when competing network resources existed."

☐ "Limited network speeds if expanding to provide multiple products & services"

☐ "Network reliability & availability questionable."

☐ "Internet telephony either failed completely (no dial tone) or performed poorly when competing network resources existed."

☐ "Participant surveys indicated low satisfaction from a user's perspective for both Internet and telephony services."

☐ "Real time design provided only limited reporting.

☐ "Does not provide for Utility required cyber security nor customization."

☐ "Limited network monitoring & management tools and advanced applications."

☐ "Expensive in comparison w/other available technologies."

☐ "Deployment costs high compared to other technologies."

☐ "BPL network maintenance costs high."

At an "overall cost $300,000", the test system consisted of only 5 water meters, 5 electric meters, 3 IP phones, 4 computers, 2 TV cameras and 1 home security system. An average cost of $20,000 per connection.

Collins stated he would be monitoring BPL, but has no plans to deploy the technology.

As verified by testing in my presence, the BPL Network:

☐ Operated within FCC regulations w/optional filters added @ 5 MHz & 10 MHz WWV

☐ Ham band filtering remained operational after power loss and power up.

☐ Identified RF noise filtered at a 40db level (standard is 30db) virtually disappeared.

The Austin test has demonstrated two important facts about BPL technology:

☐ BPL is not the high capability technology that industry advocates have claimed.

☐ BPL systems can be operated without the kind harmful interference experienced in places like Manassas, VA, Cottonwood AZ and Briarcliff, NY.

During my last visit to the east Austin test area, the BPL equipment was still in operation. Pete Collins plans to decommission the equipment and turn off the system during January.

Both Pete Collins of the City and Jerry Hernandez of Austin Energy were extremely cooperative and helpful during the course of the test. They demonstrated a high level of professionalism, technical knowledge and concern for our BPL issues.

PowerGrid and Corinex, the BPL folks, were also very cooperative despite their contrary interests to ours.

Special thanks go to Gene Preston, K5GP and Bob Morgan, WB5AOH for their work in support of the BPL effort.

Ed Hare, the ARRL Lab Manager, and BPL guru provided invaluable support and resources from the League.

The BPL787 Group will remain active for a while. "In building" BPL is still a potential challenge and is being deployed in many locations.

gr

Topic: 3872 Message: 3872

I know D-star isn't really new. But its' new to me. I've been doing some research and I'd like to get a D-star radio. Does anyone know if the Icom IC-V82 is D-star capable? I've read the info on the Icom America site, and from what I'm reading it is, but the newer model, the IC-V85 isn't, which doesn't make sense to me. Anyway, any input on the subject would be greatly appreciated, thanks

Randy

3880. [Fwd: [TexasVHF] K5QE Multi-op VHF Contest Station will be on for the Jan Contest]

Yahoo group: Temple_ARC
Date: 2008-01-16 18:26:41 UTC
From: Steve S. Bosshard (NU5D)
Topic: 3880 Message: 3880

Hello to everyone...the K5QE contest station will be operating for the entire contest from 1PM on Sat till 10PM on Sunday. We look forward to working everyone in the greater TX area. We are located in EM31cj--way East of everyone else, so point over this way and work some DX. If you have an IC706 type radio, you can work us on 6M, 2M, and 432. It is amazing how far you can work if you just get on and try. There will be lots of big stations on this weekend, so you will find lots of activity.

For a simple horizontal yagi, check out Kent's cheap yagis. Here is a link to the article--http://www.vhfsouth.com/tutorials/chp-yagis.htm I built one for 83cents!! It is fun and instructive.

Good luck to everyone in the contest....have fun and enjoy. 73's

3885. Easy CD-ROM Tray-Out Fix!

Yahoo group: Temple_ARC
Date: 2008-01-22 01:26:12 UTC
From: Charlie Schlieper
Topic: 3885 Message: 3885

A (DVD/CD-ROM) TIP that 'might' work for you...

Sometimes, one of the first things to fail in an otherwise good
DVD/CD-ROM drive, is the "tray out" function. Having a dozen
different computers to play with has given me a chance to discover
a solution to this problem.

Some units gradually get where they take several button pushes
to trayout. In severe cases, a paper-clip is even needed. I have
learned that-- in most cases, stubborn tray-outs can be fixed by
a simple trick of leaving a "BLANK" disk in the drive. With a blank
disk, most of them seem to tray out just fine, and if this is the only
problem, it could extend the use of the unit.

From: wx5sd
Topic: 3886 Message: 3886

I have come into possession of a Tektronix 2710 Spectrum Analyzer. I haven't powered it up yet but was told it works. I would let it go for about $275 or trade it for an MFJ Antenna Analyzer.

3891. Sandy Bush

Yahoo group: Temple_ARC
Date: 2008-01-26 00:15:28 UTC
From: Carolyn Black
Topic: 3891 Message: 3891

To All our members and friends:
Our prayers go out to Larry, David and the family. We have included a brief obituary on the life of Sandy Bush. She will be missed by her wonderful family and all that knew her.
Ruby Florence "Sandy" Bush
September 26, 1929 - January 25, 2008

Ruby Florence Bush, known to all her family and friends as Sandy, of Waco, Texas, passed away early in the morning of January 25, 2008, after battling pneumonia and other breathing difficulties for several years. Services will be at 1:30 p.m. Tuesday, January 29 at Wilkirson-Hatch-Bailey. Internment will follow at Oakwood Cemetery in Waco. Visitation with the family will be from 6 p.m to 8 p.m. on Monday, January 28, at the Wilkirson-Hatch-Bailey Garden Room.

Sandy was born September 26, 1929 to Fred and Ethel Lucas Sanders in Spearman, Texas. Her mother later remarried to N.M. Baker, with whom Sandy developed a close relationship. She was married to Larry Bush on July 22, 1948 in Houston, and moved to Waco in 1949 where they have lived for over 59 years.

Sandy was preceded in death by her parents and step-father. She is survived by her her husband, Larry Bush; her son, David Bush; granddaughter, Tiffani Loreille, and great-granddaughter, Sarah Loreille; sisters, Frances Smith; and twin sisters, Hazel Stumpf and Helen Boyd.

Memorials may be sent to Methodist Children's Home in Waco. The family invites you to leave a message or memory in our Memorial Guestbook☐ at www.wilkirsonhatchbailey.com.

3893. Satellite expected to fall to earth

Yahoo group: Temple_ARC
Date: 2008-01-27 17:12:01 UTC
From: Charlie Schlieper
Topic: 3893 Message: 3893

News Item...

Several news sources are now reporting that a large US spy sattellite has gone out-of-control, and is expected to crash to earth sometime in either February or March. Although this is NOT an Amateur Radio bird, I thought this item might be of interest. Should the impact, if not mitigated by another process, hit near an area you're located, DO NOT approach the impact site! There may be some hazardous materials (toxic chemicals such as hydrazine) left, that was not completely burned up.

FAQ: (Frequently Asked Question)
How will I tell if it hits in my backyard?

ANSWER: Trust me, you'll know! The satellite weighs 20,000 pounds, and is the size of a small bus!

Good Luck!
---Charlie

3898. Work an FM Repeater in Space

Yahoo group: Temple_ARC
Date: 2008-02-01 01:06:17 UTC
From: Charlie Schlieper
Topic: 3898 Message: 3898

The ISS Cross-band (bent-pipe) FM Repeater is operational again!
(I was able to make some pretty nice contacts on the last pass.)

The UPLINK frequency is: 437.800 MHz FM
The DNLINK frequency is: 145.800 MHz FM

Be sure to incorporate DOPPLER SHIFT in your frequencies that you program-- especially or the UHF UPLINK side. Satellite radios allow more accurate programming (and control) of Doppler, but even if you have an ordinary full-duplex dual-band FM radio, you can still accomplish it by using 5-kHz shifts, each side of the UHF center frequency. Don't shift the 2-meter side more than +/- 5kHz total, and even leaving your RECEIVE set on 145.800 MHz might work okay.

You need to use headphones (in full-duplex mode) to advoid feedback in working this FM repeater.

No Sub-Tone is required.

The downlink signal from the ISS seems quite strong.

73,
Charlie, N5TD

You really need to have a SATELLITE tracking program to do this.

There are a number of good satellite tracking programs to use:

STSPLUS --- Free
Sat32PC --- Usable for a while without registration, I think.
Traksat 409 --- Free
InstanTrack (one of my favorites, but is not free)
NOVA
S.C.R.A.P. (Satellite Contact Report Analysis and Prediction)
LogSat
WinOrbit36 --- Free
Orbitron --- Free
SatSCAPE --- Free
GPredict, for LINUX... --- Free

Just home in on one that is FREE to use at first, then learn how to
set it up for your location, and learn how to update the Keplerian
Data (elements) to keep it accurate. This will allow you to know
when any Satellite pass, or the ISS, is going to be within range.

Hope this gets you started...

--- Charlie

Forwarded from the Side Winders on Two list

-------- Original Message --------
Subject: [sidewindersontwo] The SWOT 2-Meter Sideband Activity Night to Begin in Dallas/Fort Worth
Date: Tue, 05 Feb 2008 23:20:02 -0000
From: Art Jackson <ka5dwi@...>
Reply-To: sidewindersontwo@yahoogroups.com
To: sidewindersontwo@yahoogroups.com

The SWOT 2-Meter Sideband Activity Night

Many of us here in SideWinders-On-Two-Radio Club, recognize that it is an absolute challenge to bring new people into this part of the hobby. We have always felt that with the advent of many of today's rigs now having both HF and VHF capabilities that we would see a growth in activity on 2 Meter SSB, but have not been convinced that this has happened. We are disappointed that so many that own FT-857s, IC-706s and similar rigs do not have the slightest notion of the pleasure and enjoyment of working 2-Meter SSB. Many owners of these rigs look into working 2-Meter repeaters with them rather than looking into how well they work on 2-Meter SSB.

So in response to Jim McMaster's (KM5PO) and my article in the last issue of the SWOT Bulletin, conversations with an enthusiastic local Ham (Tom Childers, N5GE), actions and activities in other area of the country (such as the 25-25 Net in California), it is time to try new things. Better yet, it is time to try some old things. It is time to be a little pragmatic and try things out whether they work on not.

Here in the Dallas/ Fort Worth Texas area, we are going to attempt a S.W.O.T. 2-Meter SSB Activity Night at 9:00PM local time on Friday Nights.

We intend to attract new participants to this hobby. For that reason, will make a serious attempt to utilize both antenna polarizations and actually may focus more on vertical polarization since more than likely most operators of 2-Meters use this at least. We have selected Friday evenings for this event as it will not interfere with any other SWOT or NORCAL Nets.

I want you all to spread the word, and also whenever possible please participate. Your relays will be much appreciated. We also would like everyone in SWOT to do this activity within their Ham Radio

communities. We ask that you let us know that you have begun one. We will list them on the Website and the Yahoo Group Page. All we ask is that these are coordinated by a member of SWOT (paid member not required). The events are not meant to be formal and run them as you wish. A "roundtable" and "ragchew" format, with pauses for check-ins might be one-way to consider. After a length of time, you might do a roster.

In order to maintain peace on 2-Meter SSB, we will make general calls and announcements occasionally on 144.200 MHz about the Activity, then move to 144.250 or .240 MHz to continue the activity. Please avoid conducting QSO's on 144.200 MHz.

We encourage all of SWOT to start or participate in one of these events. Please, let us know any plans you have to do one of these in your local areas and please always invite others to join the fun. Always share your experiences and number of participants.

Thank you for you participation and any thoughts and ideas.
73's
Art Jackson KA5DWI
SWOT #2497 and Chairman

3911. Dodging a Bullet

Yahoo group: Temple_ARC
Date: 2008-02-06 13:16:02 UTC
From: Warren Rowe
Topic: 3911 Message: 3911

Yesterday we had a line of thunderstorms form just to the east of Temple and the I-35 corridor. At first it didn't look like a whole lot, but the line built very quickly as it moved to the east away from us. I was walking home from work yesterday afternoon at around 3 pm and watched the rapidly building line of storms as it moved off toward the east, and I just happened to think that there could be problems for East Texas and beyond if it kept up its current pace. Forecasts were saying that there was a severe weather threat from East Texas to the southeastern US with hail, damaging winds and a few tornadoes possible.

Unfortunately, that's exactly what happened.

This morning I awoke to the news that at least 24 people had died due to severe storms moving through the warned areas of the country. The line of severe thunderstorms continues to move through the region this morning, with several severe thunderstorm warnings currently out and at least one tornado warning in effect.

"So what does this mean to me if all of this is happening in another part of the country?" you might ask.

It means that it can happen HERE also, at any time of day or night.

I'm saying this now because of the SKYWARN classes that are coming up. Waco is this weekend, with Killeen, Lampasas, and other area cities having theirs soon. If you haven't been to a Skywarn class at all, or haven't been to one recently, you really should go to one. I can guarantee that you will learn a lot from attending them, and that information might even save your life (or someone else's) one day.

On top of that, if we work together to serve the Central Texas area in helping to warn of severe weather as well as other emergency and disasters, we would be providing an extremely valuable public service.

Whether one may agree with me or disagree, it is the truth and we must realize that. Forget the past and focus on the present and future, to help each other and to serve Central Texas the way we should. We have the talent and we need to use it in a way that would benefit all.

Just part of my thoughts...thoughts that I strongly believe and will be unshaken.

Warren, WR1TX

Subject: [TARC] Dodging a Bullet

Yesterday we had a line of thunderstorms form just to the east of Temple and the I-35 corridor. At first it didn't look like a whole lot, but the line built very quickly as it moved to the east away from us. I was walking home from work yesterday afternoon at around 3 pm and watched the rapidly building line of storms as it moved off toward the east, and I just happened to think that there could be problems for East Texas and beyond if it kept up its current pace. Forecasts were saying that there was a severe weather threat from East Texas to the southeastern US with hail, damaging winds and a few tornadoes possible.

Unfortunately, that's exactly what happened.

This morning I awoke to the news that at least 24 people had died due to severe storms moving through the warned areas of the country. The line of severe thunderstorms continues to move through the region this morning, with several severe thunderstorm warnings currently out and at least one tornado warning in effect.

"So what does this mean to me if all of this is happening in another part of the country?" you might ask.

It means that it can happen HERE also, at any time of day or night.

I'm saying this now because of the SKYWARN classes that are coming up. Waco is this weekend, with Killeen, Lampasas, and other area cities having theirs soon. If you haven't been to a Skywarn class at all, or haven't been to one recently, you really should go to one. I can guarantee that you will learn a lot from attending them, and that information might even save your life (or someone else's) one day.

On top of that, if we work together to serve the Central Texas area in helping to warn of severe weather as well as other emergency and disasters, we would be providing an extremely valuable public service.

Whether one may agree with me or disagree, it is the truth and we must realize that. Forget the past and focus on the present and future, to help each other and to serve Central Texas the way we should. We have the talent and we need to use it in a way that would benefit all.

Just part of my thoughts...thoughts that I strongly believe and will be unshaken.

Warren, WR1TX

3919. Periodic Upper Band Openings...

Yahoo group: Temple_ARC
Date: 2008-02-11 18:51:44 UTC
From: Charlie Schlieper
Topic: 3919 Message: 3919

A few brief propagation notes...

There are NO sunspots today, as usual; however, the Solar Wind
Speed is elevated at 661.3 km/s (density at 2.1 protons/cubic-cm)
and the Bz magnetic field component is slightly POSITIVE.

Watch for periodic upper band openings, such as Spencer Sholly,
KB5WQW, found with a good contact on 10m FM with XE1KK on
29.6 MHz recently.

I have been working some good DX contacts on the digital modes,
such as Azul, Argentina on 17meters, with excellent signal reports.

It's just NOT going to be "consistent" yet for a while, so don't expect
it.

Good Luck!

Charlie, N5TD

Topic: 3923 Message: 3923

Two arrest warrants issued in Bellmead animal control officer's killing

Authorities have obtained murder arrest warrants for two men in the June shooting death of Bellmead animal control officer Bobby Evans.

Bellmead police officers served James Terry Ramirez, 43, with a murder warrant at the McLennan County Jail, where he is being held on drug charges.

Officials will serve Jerry Mack Newland, 31, with a murder warrant in Palestine, Texas, where he is serving a 10-year prison sentence for drug offenses, Cawthon said.

Evans was shot in the back on June 18, 2007 as he was bringing a dog to the remote animal shelter on Dugger Drive in Bellmead. Officials said at the time there was no sign of a struggle, and they were not aware of any previous threats made against Evans.

Ramirez and Newland were named in a search warrant affidavit obtained by Bellmead police in December to search three locations, including the county jail property room. The searches yielded two .45-caliber rounds, three .22-caliber rounds, four .38-caliber rounds and one size 10 1/2 Ozark Trail hiking boot, officials said. However, the items seized were not useful to the investigation at the time.

Authorities suspected the two killed Evans during their search for an anhydrous ammonia tank stashed near the animal shelter, according to the search warrant affidavit. Anhydrous ammonia can be used to make methamphetamine, a powerful, highly addictive stimulant.

Court documents say a witness said Evans, 47, a husband, father and grandfather, was killed "for no reason."

Bellmead Police Chief Robert Harold said he and his investigators are happy if the charges comfort Evans' survivors.

According to court documents, Ramirez and Newland were at the animal shelter the day of the shooting to find the hidden ammonia tank and feared Evans had seen them.

According to records filed in the case, an unidentified "informant" told investigators Ramirez kept calling someone June 18 in a determined effort to find anhydrous ammonia.

A person identified by records as a witness told Ramirez the anhydrous ammonia tank was near the animal shelter.

Ramirez searched the location in vain before calling the witness, who later told authorities that he and Newland drove to Dugger Road to help in the search.

About that time, Evans drove up and Ramirez said he was afraid Evans saw him, according to the affidavit. Ramirez and Newland followed Evans to the building where one of them shot him in the back, records state. The records do not indicate which man fired the fatal shot.

After the shooting, Ramirez disassembled the handgun and put the pieces, along with some clothing, into three black trash bags, according to the records. He later allegedly threw one of the trash bags onto land on Old Mexia Road, which later was searched by authorities.

3926. 2-Mtr SWOT NET 144.250 MHz

Yahoo group: Temple_ARC
Date: 2008-02-14 04:11:35 UTC
From: Charlie Schlieper
Topic: 3926 Message: 3926

2-meters, SSB...

When I checked into the 2-meter SWOT Net tonight, with Bob, W5FKN as NCS in Decatur, Texas, the first thing he commented on was the 2005 TARC Field Day picture (taken by John, KE5C) of me laying in a hammock, with the "Amateur Radio Demonstration Mode" sign in the background.

I was only using a single horizontally polarized 3-element YAGI to check in! (Decatur is about 150 miles North of Temple.)

The North Texas SWOT Net, (Side-Winders On Two), meets Wednesday nights at 9PM, on 144.250 MHz, USB.

73,

Charlie, N5TD

http://commfaculty.fullerton.edu/woverbeck/quagi.htm

Today many of the newer all band radios in addition to 160-6M also sport 2M or 70CM SSB capability. The Quagi antenna shown in the link above is inexpensive and easy to build with a quick trip to Lowes or Home Depot. I used hard drawn copper (pulled between the bumper of my car and a utility pole) for the 2M Quagi I built in 1977. At that time there were a number of Temple / Waco ham using 2M SSB. There is an approximate 9 dB advantage in SSB vs FM and 100 + mile contacts were very common. There is also a Saturday morning SWOT (sidewinders on two) net called by Jim, KM5PO from Arlington. There is often a Temple or Killeen / Cove station on board.

Steve,

How would a 2 meter Halo work off my 500 foot tower? I have been thinking about putting a crossband coupler on one of the 900 MHz 1 5/8 inch lines with a Halo for 2 meter SSB. <GRIN> Only problem I see is I may have a problem with not being able to turn a beam to null out someone since it would be Omni.

Paul

3930. Suspect charged in murder of Bobby's Evans KD5BJG

Yahoo group: Temple_ARC
Date: 2008-02-13 11:55:47 UTC
From: N5ZXJ aka TowerMonkey
Topic: 3930 Message: 3930

Looks like a suspect in the Mclennan County Jail has now been charged in the murder of Booby Evans - KD5BJG. Bond is set at over 1 million dollars.

Murder arrest warrants have been obtained for Jerry Mack Newland, and James Terry Ramirez in the killing of the Bellmead animal control officer.

Bobby was shot in the back on June 18, 2007 as he was bringing a dog to the remote animal shelter.

We shall see what happens soon.

Gerald - N5ZXJ

From: N5ZXJ aka TowerMonkey
Topic: 3932 Message: 3932

Please Welcome Thirteen new Tecnician's and an Extra also...

The FCC sent a valentine to the following new Central Texas hams:

JoLeen Eiklenborg, KE5SVB Robinson, TX
Gene J. Mikeska Jr., KE5SVC McGregor, TX
Ben L. May, KE5SVD Temple, TX
Stephen D. Cannon, KE5SVE Belton, TX
Alfred J. Layhew, (Jeff) KE5SVF Hamilton, TX
April D. Fieseler, KE5SVG Troy, TX
Lloyd D. Hayslip, (Buddy) KE5SVH Salado, TX
Cheryl M. Epperson, KE5SVI Belton, TX
Jacqueline K. Hagerty, KE5SVJ Temple, TX
Edwin Ramos-Rivera, KE5SVK Hamilton, TX
Alan Butler, KE5SVL Temple, TX
Phillip B. Nance, KE5SVM Gatesville, TX
Tracy J Nance, KE5SVN Gatesville, TX

This is 100% the latest Bell County Reservist's Technician class and all that started, finished. You bet I am proud of them!!! Nine of them already have or will soon have FT-60s programmed up and ready to go.
This group will give us some additional SKYWARN coverage in areas that are low in active hams.

And a special congratulation to Leon LaBorde, KE5NCJ, for his achieving EXTRA in about one year. Our group was privileged to give him all three tests. Leon is very active with the Killeen and Copperas Cove hams.

The VEs assisting in the exam last Saturday were:

Richard James, KB5YAY (General)
Michael Hankins, KE5NWG (Extra)
Dolores Brennan, KE5MBC (Extra)
Tom Brennan, KD5VIJ (Extra)
Ron Thompson, W5WRE (Extra)
Gerald Richmond, N5ZXJ (General)

A special thanks to the Bell County Communications Center for making the facilities available for the class and the test.

If I can get ten more students rounded up, I will start the next class in April.

Don't forget SKYWARN in Killeen at the CTC's Lady Bird Johnson Auditorium on March 1st.

Thanks to all..

Joe B. Dorn, W5VEX

...HEAVY RAINFALL AND SEVERE WEATHER LIKELY ACROSS NORTH TEXAS
LATE TONIGHT THROUGH SATURDAY EVENING...

A STRONG UPPER LEVEL STORM SYSTEM WILL APPROACH NORTH TEXAS LATE
TONIGHT RESULTING IN AREAS OF RAIN AND THUNDERSTORMS OVERNIGHT
AND PERSISTING INTO SATURDAY.

AREAS OF RAIN ARE EXPECTED TO DEVELOP ACROSS NORTH TEXAS TONIGHT
AS MOISTURE CONTINUES TO SURGE NORTHWARD OVER THE COOLER AIR
BEHIND A COLD FRONT. LATE TONIGHT AS THE UPPER LEVEL LOW GETS
CLOSER...THUNDERSTORMS ARE EXPECTED TO DEVELOP. SOME OF THESE
COULD BE SEVERE WITH MAINLY LARGE HAIL. THE HIGHEST THREAT FOR
LARGE HAIL WILL BE MAINLY SOUTH OF INTERSTATE 20 AND WEST OF
INTERSTATE 35.

ON SATURDAY...WIDESPREAD RAIN AND THUNDERSTORMS ARE EXPECTED
ACROSS ALL OF NORTH TEXAS. AREAS MAINLY TO THE SOUTHEAST OF A
TEMPLE TO ATHENS LINE WILL SEE AN ENHANCED TORNADO THREAT DURING
THE AFTERNOON HOURS AS A WARM FRONT LIFTS NORTH THROUGH THE AREA.
IN ADDITION TO ANY SEVERE WEATHER...WIDESPREAD RAINFALL AMOUNTS OF
2 TO 4 INCHES CAN BE EXPECTED. WHILE THIS WILL BE MUCH NEEDED
RAINFALL...SOME LOCALIZED AREAS OF FLOODING MAY OCCUR.

THE PRECIPITATION IS EXPECTED TO END FROM WEST TO EAST LATE
SATURDAY NIGHT INTO EARLY SUNDAY MORNING.

RESIDENTS OF NORTH TEXAS SHOULD CONTINUE TO MONITOR THIS WEATHER
SITUATION CLOSELY FOR THE POSSIBILITY OF SEVERE WEATHER AND HEAVY
RAINFALL. STAY TUNED TO NOAA WEATHER RADIO OR GO TO
WWW.WEATHER.GOV/FORTWORTH FOR THE LATEST FORECAST INFORMATION.

This could be a very significant weather event, and we should all be
watchful through late Saturday evening. Monitor BOTH 146.820 and
147.140 with PL tone of 123.0 for each repeater for possible activity
related to this developing event.

Warren Rowe, WR1TX

No problem, Harold. I'm on 147.140 now and will keep it there except
for a time or two where I will be on 146.820.

From: Warren Rowe
Topic: 3939 Message: 3939

I got some good news from the ARRL this week. My ARRL Volunteer Examiner certification came in the mail; this was something I had wanted to do for quite some time. So now, I can be available to help out with any examinations (done by the ARRL VEC) if needed.

Now if I can get my W5YI VE certification done...

3944. Hellschreiber Digital Mode

Yahoo group: Temple_ARC
Date: 2008-02-19 23:00:37 UTC
From: Charlie Schlieper
Topic: 3944 Message: 3944

The basic "Hellschreiber Mode" has been around for about 70 years, and was used in World War II by the Germans. Dr. Rudolf Hell, inventor of the mode, was a pretty amazing guy back in his time, and accrued a total of 133 patents in his lifetime.

Feld-Hell is the most commonly known, but there are other 'variants' that are interesting to use and learn about-- PSK-Hell and FM-Hell, both 105 baud and 245 baud. Each character of an FM105 Hellschreiber transmission is sent as a series of dots, in a matrix form, but the matrix is slightly modified with 7 x 6 structure, instead of 7 x 7. The print, however, is excellent! The most obvious advantage of either PSK-Hell or FM-Hell lies in sensitivity. There is in the order of 6 to 8 dB advantage over noise in these modes.

PSK-Hell uses what is known as "Differential Phase Shift Keying," where the data is encoded in carrier phase rather than amplitude. FM-Hell is even more unique, as it uses what is essentially "Minimum Shift Keying," or (MSK). (The dots don't change phase unless switching from WHITE to BLACK, or visa-versa.) Well, enough of this technical description. More information on these modes can easily be found on the net, at places like < http://www.qsl.net/zl1bpu/FUZZY/PSK.htm >.

Thanks to a lengthy QSO with Joe, N8FQ, in Grand Haven, Michigan, I was able to learn more about FM-Hell 105-baud. FM-Hell 105 baud is close to the same bandwidth as a PSK-63 signal, or about 55-Hertz.

Suggested HELLSCHREIBER frequencies:

10 Meters 28.074 MHz (USB)

12 Meters 24.924 MHz (USB)

15 Meters 21.074 MHz (USB)

17 Meters 18.104 MHz (USB)

20 Meters 14.074 MHz (USB)

30 Meters 10.134 MHz (USB)

40 Meters 7.084 MHz (USB)

80 Meters 3.574 Mhz (USB)

Enjoy Ham Radio,

Charlie, N5TD

3948. HP 608D VHF Signal Generator for Trade

Yahoo group: Temple_ARC
Date: 2008-02-21 03:34:07 UTC
From: n5oni
Topic: 3948 Message: 3948

I have an HP 608D VHF signal generator for trade.

The HP 608D generates AM, CW, Pulse from 10-420 MHZ (NO FM). Was built in the mid 50's to mid 60's. Dimensions are 13" Wide, 16" tall, 21" deep, weight is 60 pounds. Has 21 tubes. Serial number is scratched out, don't know why.

I Have never used it. Turned it on this week and it did generate a 10-420 mhz signal. The switch contacts will need cleaning though. Physical condition is good.

Will trade for HF or VHF gear or just about anything ham related of similar value. Your gear does not have to work but be complete and have some chance of working again.

I have a pdf manual or it can be downloaded from HPARCHIVES.COM.
See a picture of a similar unit here:
http://www.radiomuseum.org/r/hp_vhf_signal_generator_608d.html

Email me with your trade offers.
Hurry, my shack is sinking

3949. News Letter Technical Article

Yahoo group: Temple_ARC
Date: 2008-02-21 03:26:31 UTC
From: John Hobson
Topic: 3944 Message: 3949

Charlie,

Would you consider doing a couple of short articles this year for the TARC monthly news letter on simple home brew projects or technical topic such as the newer digital modes? I have enjoyed the ones you have done in the past and found myself reading them first before going through the remainder of the news letter. I am sure there are a number of others in TARC that also appreciate your building expertise and ability to explain technical in a way all of us can understand as I do.

One of my goals this year is to help make all TARC members better informed and technically capable Hams. Your assistance in this goal would be appreciated.

I do recognize the many small things you do and appreciate your time you give TARC.

73,

John

From: Warren Rowe
Topic: 3959 Message: 3959

Except for a few items that some club members likely have in their possession that I need to check on, the TARC inventory has been completed. Once I can determine the whereabouts of these items, the list can be finalized and updated accurately. So if someone has in his or her possession an item that belongs to TARC, please let me know so I can update the inventory list!!!

Special thanks go to N5AWH and W5DUK for their help on Saturday afternoon; they did an AWESOME job in their participation and should be commended for their efforts!

I will likely do another inventory in October; I will post more information as that event gets closer.

Warren Rowe, WR1TX
TARC Secretary

3960. ARRL Field Day Information Now Available

Yahoo group: Temple_ARC
Date: 2008-02-25 13:13:00 UTC
From: Warren Rowe
Topic: 3960 Message: 3960

Field Day will be here before you know it! Do you plan to participate this year?

The ARRL now has a web page devoted to this year's Field Day event:

http://www.arrl.org/contests/announcements/fd/

The entire information package, complete with rules, log sheets, dupe sheets, etc., can be downloaded from there. Further information about FD can be found there also.

I feel like NOW is the time to start planning for this year's FD activities, and not wait until only about a month or two before the event itself. Let's make 2008's Field Day event the best ever for TARC and the North Texas Section!

Warren Rowe, WR1TX

3961. Skywarn Basic & Advanced Spotter Training for Bell County

Yahoo group: Temple_ARC
Date: 2008-02-26 03:13:30 UTC
From: John Hobson
Topic: 3959 Message: 3961

This is a reminder for Hams in Bell and surrounding Counties:

Skywarn Basic & Advanced Spotter Training in Bell County

March 1, 2008

8:30AM to 4:30PM

Location:

Central Texas College

Killeen TX

Nursing & Science Building

Building # 150

Directions:

From Hwy 190, take the Clear Creek exit located 2 miles West of the Ft Hood main gate entrance

Go South to University Drive

Turn Right (West) and proceed to Bell Tower Drive

Turn Right and go North past the Planetarium to the Nursing & Science Building (Bldg 150)

A copy of a map for CTC may be found at the following link:

http://www.ctcd.edu/camp_map.htm

I am told there will be signs posted showing where to turn.

John Hobson

3968. UHF Power Restriction MAP

Yahoo group: Temple_ARC
Date: 2008-02-27 20:07:05 UTC
From: Charlie Schlieper
Topic: 3968 Message: 3968

A 70-cm Band Note:

Some of you may NOT be aware that in certain parts of the country, there is a POWER output restriction when using the 70-cm band, 420 to 450 MHz. If this Map can go through the TARC reflector, please note the restricted YELLOW areas-- which have a maximum of 50-watts peak envelope power. For more information, go to the URL: http://www.fcc.gov/oet/info/maps/us7/

This is a good post, Charlie. I assume that this is due to the recent issues between several 70cm repeaters and the PAWS radar sites at Beale AFB in CA and in New England? I know that the ARRL, the FCC, and the Dept of Defense were working together to solve these problems.

Warren, WR1TX

Major Event Calendar

FAR SCHOLARSHIPS ANNOUNCEMENT

THE FOUNDATION FOR AMATEUR RADIO, INC., a non-profit organization with headquarters in Washington, D.C., plans to administer fifty-five (55) scholarships for the academic year 2008 - 2009 to assist licensed Radio Amateurs. The Foundation, composed of over seventy-five local area Amateur Radio Clubs, fully funds three of these scholarships. Eleven are funded with the income from grants. The remaining forty-one (41) are administered by the Foundation without cost to the various donors.

Licensed Radio Amateurs may compete for these awards if they plan to pursue a full-time course of studies beyond high school and are enrolled in or have been accepted for enrollment at an accredited university, college or technical school. The awards range from $500 to $3000 with preference given in some cases to residents of specified geographical areas or the pursuit of certain study programs. Non-USA residents are eligible to apply for some of the scholarships. Clubs, especially those in California, Delaware, Maryland, Ohio, Pennsylvania, Texas, Virginia and Wisconsin (areas of preferred residence for some of the scholarships), are encouraged to announce these opportunities at their meetings, in their club newsletters, during training classes, on their nets and on their world wide web home pages.

Additional information and an application form may be requested by letter or QSL card, postmarked prior to March 30, 2008 from:

FAR Scholarships
Post Office Box 831
Riverdale, MD 20738

Applications are also available for download from the Foundation's web site http://www.amateurradio-far.org/

The Foundation for Amateur Radio, incorporated in the District of Columbia, is an exempt organization under Section 501(C)(3) of the Internal Revenue Code of 1954. It is devoted exclusively to promoting the interests of Amateur Radio and those scientific, literary and educational pursuits that advance the purposes of the Amateur Radio Service.

CLUB PRESENTATION

I will present a Power Point program at the Plano Amateur Radio Klub. The subject will be the latest happenings with the ARRL. I should have all the latest information on what is going on since I will just have returned from the Spring Executive Committee meeting in Memphis. The PARK meeting will be at 7:30pm on March 17th at the Grace Presbyterian Church, located on West Plano Parkway just west of Coit Road on the south side of the roadway. For more information check: http://www.k5prk.org

OKLAHOMA QSO PARTY

The Oklahoma QSO Party (OKQP) will be held on the 8th and 9th of March. For more details check: http://okdxa.org/web/html/rules08.htm

MAJOR EVENT CALENDAR

3976. Fwd: Cities consider ordinances on cell phones, Hamcom announcement

Yahoo group: Temple_ARC
Date: 2008-03-02 00:06:03 UTC
From: Warren Rowe
Topic: 3976 Message: 3976

From Tom Blackwell, N5GAR, our North Texas Section Manager...

---------- Forwarded message ----------
From: ARRL NTX Section <memberlist@...>
Date: Sat, Mar 1, 2008 at 12:34 PM
Subject: Cities consider ordinances on cell phones, Hamcom announcement
To: wr1tx1@...

Some cities are moving to adopt ordinances to regulate the use of cell phones by drivers of motor vehicles. So far their action on this has been limited to school zones. However some city councils have discussed a ban of cell phone usage by drivers in entire cities.

With the recent adoption of a cell phone ordinance, signs like this have posted around schools in the Highland Park Independent School District, in University Park and Highland Park:

Click here:

http://www.n5gar.com/CellPhones.jpg

We are interested in seeing that the language adopted in any State or local regulation of cell phones does not come to apply to Federally licensed amateur radio operators. Sometimes State and Municipal government officials consider language that is overly broad, and that presents unintended consequences.

We are continuing to monitor these developments in North Texas. At the ARRL, State and Local government issues are handled at the Section level. If your city is considering a proposal to regulate cellular telephones, please see that I am advised. I would appreciate receiving copies of newspaper articles and copies of proposed ordinance language, or Internet links for these, where they are available, in advance. With this we will be able to obtain a legal review of the proposed language. My EMail address is n5gar@...

From Barry Goldblatt, WA5KXX:

CQ-CQ-CQ HAM-COM 2008 IS JUNE 13-14 AT THE PLANO CENTRE IN PLANO, TX!
VISIT OUR WEB SITE: www.hamcom.org.

This is Ham-Com's 30th continuous year of operation! To celebrate we will host the ARRL West Gulf Division Convention and give away an extraordinary array of prizes. The Grand Prize is a Yaesu 857D which will be awarded at 5:00 p.m. on Saturday, June 14. The anniversary celebration includes a special door prize giveaway every hour from 9:00

a.m. to 6:00 p.m. each day. A total of 18 Alinco DJ-V17T 144 MHz FM 5 Watt HTs will be given away during the event. Winners must be present to claim the Grand Prize or any of the other door prizes offered at the event.

Complete information about the event, hours of operation, prizes, commercial exhibitors, flea markets, speakers and workshops is available at www.hamcom.org.

General admission tickets are available online at a discount through May 30 for $8.00 each ($10.00 at the door on event days). Mail-in tickets will be accepted through April 30, 2008. Just click on the link below the Grand Prize and hourly prize pictures to download the mail-in ticket form in Adobe PDF format. As in previous years, Ham-Com DOES NOT mail tickets. Pre-paid tickets will be available for pick-up at the admission desk on either day of
the event beginning at 8:00 a.m.

We expanded the number of indoor flea market tables this year. Outdoor tables are still available and there will be plenty of space in the tailgate market operated by the McKinney and Plano clubs.

Volunteers earn a free ticket for each two (2) hour shift worked. We are soliciting programs for the event and have made the sign-up process very easy. For complete information visit www.hamcom.org and click on the big red "Volunteers" or "Presenters" buttons on the upper right of any page.

EARN $25.00 FOR YOUR CLUB!

Ham-Com is continuing its efforts to help area clubs. What we propose is something that will benefit the clubs and our event. It's as easy as 1-2-3.

Here's the deal:

1. Let us know via e-mail that you want to participate in helping promote Ham-Com 2008.

2. Place our HTML or Java code snippet on your club web site splash (intro) page.*

3. That's all...we'll do the rest. Just run the banner on your web site during March, April and May and we'll pay your club $25.00. And, we'll give the club web site that generates the largest number of views and unique click-throughs $100.00. The sooner you get started, the better the chance that you'll have to earn $100.00 for your club! Each club will receive customized HTML code that will start the counter and keep track of the totals we need to determine the winner. On June 14, 2008, the Ham-Com, Inc.
Board of Directors will announce the winner. Participating clubs and the overall winner will receive their checks by August 1, 2008.

Why are we doing this? The reason is simple: We think it's important to spend money generated by the event where it will do the most good. We could, of course, buy banner ad space on large national sites. While that will certainly build interest and traffic on our web site, it won't help increase attendance very much. We believe that the best results will come from the clubs that directly support us and whose members attend our event. Over 25 clubs and organizations signed up to get their $25.00 donations the day of the announcement.

Please send e-mail to office@... and we'll help you get started.
Thank you again for your support of Ham-Com and other area Hamfests!

73

Barry A. Goldblatt, WA5KXX
Event Manager, Ham-Com, Inc.

* The Ham-Com 2008 event banner must appear on the first page of your web site that visitors see to be eligible for $25.00 payment and award of the $100.00 prize for the highest number of views and click-through traffic.

3990. Georgetown Swapfest Sunday March 9

Yahoo group: Temple_ARC
Date: 2008-03-07 22:17:31 UTC
From: Charlie Schlieper
Topic: 3990 Message: 3990

I heard rumors that the swapfest was on Saturday this year, but apparently this is not correct. It seems that it is still scheduled to be held on SUNDAY, (as usual), March 9th 2008, at the Community Center, where it used to be. It opens at 8AM for participants, and runs till 3PM if needed. (The admission is FREE!)

Talk-In (if needed) --- 146.640 (-) 162.2Hz main repeater for talk-in, and 147.080 (+) 100.0Hz secondary.

From Temple, on IH-35 take exit 262, turn East at the traffic light. Then turn left at the next "T" intersection, and then turn right at Stadium Drive, which will enter San Gabriel Park. From there, you proceed left at first stop sign, and go down till you reach the Community Center on your LEFT.

SB QST ARL ARLB005
ARLB005 W1AW 2008 Spring/Summer Operating Schedule

Morning Schedule:

Time Mode Days
------------------- ---- ---------
1300 UTC (9 AM ET) CWs Wed, Fri
1300 UTC (9 AM ET) CWf Tue, Thu

Daily Visitor Operating Hours:

1400 UTC to 1600 UTC - (10 AM to 12 PM ET)
1700 UTC to 1945 UTC - (1 PM to 3:45 PM ET)

(Station closed 1600 to 1700 UTC (12 PM to 1 PM ET))

Afternoon/Evening Schedule:

2000 UTC (4 PM ET) CWf Mon, Wed, Fri
2000 " " CWs Tue, Thu
2100 " (5 PM ET) CWb Daily
2200 " (6 PM ET) RTTY Daily
2300 " (7 PM ET) CWs Mon, Wed, Fri
2300 " " CWf Tue, Thu
0000 " (8 PM ET) CWb Daily
0100 " (9 PM ET) RTTY Daily

0145 " (9:45 PM ET) VOICE Daily
0200 " (10 PM ET) CWf Mon, Wed, Fri
0200 " " CWs Tue, Thu
0300 " (11 PM ET) CWb Daily

Frequencies (MHz)

CW: 1.8175 3.5815 7.0475 14.0475 18.0975 21.0675 28.0675 147.555
RTTY: - 3.5975 7.095 14.095 18.1025 21.095 28.095 147.555
VOICE: 1.855 3.990 7.290 14.290 18.160 21.390 28.590 147.555

Notes:

CWs = Morse Code practice (slow) = 5, 7.5, 10, 13 and 15 WPM
CWf = Morse Code practice (fast) = 35, 30, 25, 20, 15, 13 and 10 WPM
CWb = Morse Code Bulletins = 18 WPM

CW frequencies include code practices, Qualifying Runs and CW bulletins.

RTTY = Teleprinter Bulletins = BAUDOT (45.45 baud) and AMTOR-FEC (100 Baud). ASCII (110 Baud) is sent only as time allows.

Code practice texts are from QST, and the source of each practice is given at the beginning of each practice and at the beginning of alternate speeds.

On Tuesdays and Fridays at 2230 UTC (6:30 PM ET), Keplerian Elements for active amateur satellites are sent on the regular teleprinter frequencies.

A DX bulletin replaces or is added to the regular bulletins between 0000 UTC (8 PM ET) Thursdays and 0000 UTC (8 PM ET) Fridays.

In a communications emergency, monitor W1AW for special bulletins as follows: Voice on the hour, Teleprinter at 15 minutes past the hour, and CW on the half hour.

FCC licensed amateurs may operate the station from 1400 UTC to 1600 UTC (10 AM to 12 PM ET), and then from 1700 UTC to 1945 UTC (1 PM to 3:45 PM ET) Monday through Friday. Be sure to bring your current FCC amateur license or a photocopy.

The complete W1AW Operating Schedule may be found on page 97 in the March 2008 issue of QST or on the web at,
http://www.arrl.org/w1aw.html .

Topic: 3994 Message: 3994

www.bosshardradio.com/knct

Last Thursday I lost a tower top preamp on our 800 Mhz business radio system on the Ch 46/KNCT TV Tower. I went up this afternoon and snapped a few photos on the way up. The tower is 1146 ft tall and does not have an elevator. The preamp is around 500 ft above ground. I snapped some photos of Stillhouse Hollow and the surrounding area.

3996. Back on HF!

Yahoo group: Temple_ARC
Date: 2008-03-12 14:25:33 UTC
From: Warren Rowe
Topic: 3996 Message: 3996

Well, gang...I finally got my MFJ-1625 Balcony-Apartment Antenna up and going. For what it is this antenna actually works quite well! It won't outdo a Yagi or even a good dipole, but for those in a pinch (and have trouble rolling their own) the MFJ-1625 is a pretty good option.

I clamp my antenna to a balcony railing using two 3.5" C-clamps. From the counterpoise bolt mounted on the tuner that comes with the antenna I run three counterpoise wires (also included, different lengths) at 90 degree angles from each other. The shortest wire runs north, the longest one runs east, and the middle-length one runs to the south. I raise the telescoping whip up to 9-12' (depending on the band I choose to use) straight up, making the MFJ technically a vertical antenna. I tried pushing the whip out at a 45 degree angle, but it seems to work better run straight up. Everything is run to my Yaesu FT-857D and MFJ-949E tuner. The down side so far: I can't get 6 meters to tune up properly just yet, but I'm working on that.

The MFJ-1625 receives very well. As for transmit: so far since getting it set up properly I have had QSOs on 30m CW with hams in NM and CO, on 20m CW with NJ, and on 40m CW with two hams in KY. This thing even receives on 60m very well! And of course I had a short chat with our own Al, N5AWH on 7293 kHz USB just recently. (By the way, Al's station with his new vertical antenna and FT-857D sounds really great!)

For those who can't roll their own (or just a bit lazy like me) and want to test portable options (also like me) the MFJ-1625 is a pretty good place to start. For around $225 shipped it's a good deal in my view. But for many of you it may well be a good idea to try to build your own antennas. Now that I can see how the 40m-80m coil works on the MFJ, I may well eventually try to build my own vertical antenna also!

Warren, WR1TX

I agree this looks like fun. May be there is some strange item(s) at the tractor museum that we could load. How well would a pair of small airplanes at the airport parked wing tip to wing tip used as a doublet work. May be a prize for the most unusual antenna that the club ends up using for the event.

3998. License Classes Start Tomorrow (Friday March 14)

Yahoo group: Temple_ARC
Date: 2009-03-14 02:17:49 UTC
From: k5doa@vvm.com
Topic: 3998 Message: 3998

Just a reminder that we will be starting the TARC ham classes this Friday night at the Western Hill Church of Christ at the northwest corner of Highway 53 and I-35. The basic information on the classes is as follows:

Technician Class - Instructor Charlie Schlieper

Fridays and Tuesdays at 7PM through 9PM through April 15. Fewer than these 10 sessions may be held depending on the class progress.

General Class - Instructor Roy Wells

Fridays and Tuesdays. Roy would like to start at 6:30 and finish about 8:30. The the class will probably finish in 6 to 8 sessions depending on the class progress.

Extra Class - Instructor Darwin Geiselbrecht

Fridays only 7PM to 9PM for five sessions ending April 10. Let me know if you would like to take the class and can not make Fridays. I would see what I can do about scheduling some Tuesday sessions.

Even if you haven't indicated an interest in the classes, we have plenty of room and enough books to accomodate late arrivals. So just show up for the session of choice and we will be glad to have you.

There will be license exams available in Belton on April 19 after the fest. Our thanks to the Bell County emergency group for holding these VEC test sessions.

CU tomorrow night. 73 Darwin K5DOA

3999. 2008 Milam County SKYWARN Program Announcement

Subject: 2008 Milam County Skywarn Program Announcement

Greetings, All -

As you know, the 2008 severe weather season is at hand. In preparation, below is the announcement for the Milam County Skywarn severe weather program. Please help us in spreading word about this important program throughout the county.

Law and fire officials, amateur radio operators, school district safety staff, response and recovery agencies, and interested members of the public are welcome and invited to attend.

Thanks in advance for your help. We'll see everyone on the 31st!

Regards,
Gary W.

#####

SEVERE STORM PROGRAM SCHEDULED FOR MARCH 31
Severe weather observing, reporting, safety to be emphasized

The 2007 storm season in north Texas was one for the history books. Widespread devastating flooding, large destructive windstorms, tornadoes, and hail all made appearances in our area. The toll on life and property was significant, with dozens of casualties and damage in the tens of millions of dollars.

The 2008 severe weather season is just around the corner. Are you ready for whatever this year has in store? Do you have a severe weather plan at your home and your workplace? Can you recognize the clues that suggest large hail, flash flooding, or a tornado is possible? Do you want to become part of the severe weather warning system in your county?

As part of its area-wide weather preparedness campaign, the National Weather Service in Fort Worth will answer these and many other questions in a severe storm spotter training program on Monday, March 31, from 7:00 to 9:00 PM. The program will be held in Cameron at the Fire Station, and will be co-sponsored by the Milam County Emergency Management Office and the Cameron Fire Department.

The 2008 program will emphasize three fundamental concepts for severe weather events: observing, reporting, and safety. The program will discuss thunderstorm formation, severe weather production, and features associated with severe storms. The presentation will also review tornado formation and behavior, and safety when thunderstorms threaten. The program will discuss spotter operations and recommended procedures when spotting. The two-hour presentation will be in multimedia format, featuring numerous pictures of storms and nearly 25 minutes of storm video clips.

"We have some new material in the 2008 spotter training program", said Gary Woodall, Warning Coordination Meteorologist at the Fort Worth NWS Office. "Nearly all of the photos and video clips are different this year. We'll have many more identification cases, and we'll discuss the operational aspects of storm spotters in more detail".

Despite the revisions to the program, the fundamental purpose of the spotter training - and of the storm spotter network as a whole - remains unchanged. "We could not do our job as well as we do without storm spotters. Radar is a great tool, but it only tells us part of a storm's story. Spotter observations complement the electronic data we use to analyze storms. The combination of spotter reports and radar data gives us the best possible picture of the storms and what's going on inside them".

The program is free and open to the public. "By coming to this program, you will learn a lot about thunderstorms", Woodall said. "Even if you don't become an active storm spotter, you will learn about how storms work and the visual clues you can identify when storms are in your area. We will discuss severe weather safety tips. This will better prepare yourself and your family for the threats that storms pose".

The Milam County severe weather program is one of over 40 that the Fort Worth NWS Office will conduct between January and early April 2008. The National Weather Service in Fort Worth provides forecasts, warnings, and weather services for 46 counties in north and north-central Texas. For more information on severe weather and the National Weather Service, visit the Fort Worth Forecast Office's website at http://www.weather.gov/fortworth.

4004. Filters-- and the Important Role they Play

Yahoo group: Temple_ARC
Date: 2008-03-17 21:56:07 UTC
From: Charlie Schlieper
Topic: 4004 Message: 4004

The use of appropriate FILTERS can be an important part of your Ham Radio experience. Unless I lived far out in the country, apart from any close neighbors, I wouldn't dream of running much power on HF or 6-Meters-- without Low-Pass filters. (Or in the case of 6-Meters, a Band-Pass FILTER such as an ICE Model 412W) There's even a case for having filters for added "insurance" against interference complaints, with 100-watts or less if you're station is located in town. <Remember, we have to live with our neighbors!!!>

I purchased a total of eleven (11) INTERMOD FILTERS from Par Electronics, to eliminate PAGING interference at home and at three of my major DIGIPEATER sites a few years back--Cleburne, Chnl 25 TV tower, and Marble Falls. Sometimes, the difference was so clear that it flat didn't work without the filter, and worked perfectly after the filter was installed. My point is-- many times (but not always), the correct use of a FILTER can solve problems in Ham Radio applications.

It is wise and prudent to have a LOW-PASS FILTER in HF systems to reduce the chance of harmonic radiation. The passband is usually DC to 30-MHz, such as the ICE Model 421 Lowpass Filter, but some filters extend up to 54-MHz to include 6-meters.

Some of you might want to stock a HIGH-PASS TVI FILTER, just to have one to try in case one of your neighbors complains about your HF operation. Industrial Communication Engineers (ICE) has a Model 430B Highpass Filter, 54-500-MHz 75-ohms, with F-connectors on each side and a short convenient pigtail on the TV side for set connection. You can tell by the physical appearance of ICE filters that quality is built into their products.

There are all sorts of FILTERS-- bandpass, lowpass, highpass, notch filters, ie. (or dual-notch filters such as my VHF TN-152-158's) to help you solve unique problems in Amateur Radio, and help assure that YOUR system is CLEAN.

Enjoy Ham Radio!
Charlie, N5TD

Charlie, what brand of filters are the best in your opinion? I mean not only by reputation but also by application, meaning which brand(s) have proven to work the best? Also, what cost range are we looking at in general?

4008. Re: [TARC] Filters-- and the Important Role they Play

Yahoo group: Temple_ARC
Date: 2008-03-18 18:51:17 UTC
From: Charlie Schlieper
Topic: 4004 Message: 4008

"What is the best filter" is a dangerous question, although asked with good intentions. There are MANY good quality FILTERS made today for use in Ham Radio.

I use TWO seperate filters in my HF system, which are connected in series. The transmitter first sees a conventional Low-Pass filter (DC to 30-MHz passband), then goes into a HI-Q "Common-Current Mode" Filter, (CF5KV), made by RF Inquiry. The CF5KV is NOT a Low-Pass Filter exactly, but one that filters out the "common-mode differential noise energy," which can be transferred between your transmitter and ground, and includes any stray capacitance. (I don't remember what I paid for the CF5KV, but it was probably in the $90.00 range, or more.) The combination of these two filters has somehow enabled me to run fairly high-power on HF without ANY interference complaints from my neighbors.

Most Low-Pass Filters seem to cost somewhere in the neighborhood of $50.00 to $120.00, depending on power handling capabilities. An MFJ-704 is around ($50. to $60.), while the MFJ-705 (more power) is approximately double that. Kenwood makes an LF-30A which is good (around $65.00), and Bencher has their YA-1 LP filter ($91.00). Vectronics has an LP-30 ($80.00), and a higher-power version for ($120.00). DCI (Digital Comm) makes one, and I believe there's an Ameritron LP filter also available. There are many choices for amateurs, in obtaining low-pass RF filters. I will respectfully refrain from recommending one brand over the other.

I use a good "OakBay" Low-Pass Filter on my 6-meter system, (DC to 54-MHz bandpass). It's an older model, and I have tried to purchase another one-- only to find it is no longer available. I got an "ICE" 6-Mtr band-pass filter Model 412-W (50-54 MHz), for a spare.

A few more High-Pass Filters that I might mention are: AMECO HP-75T, for $15.00, and an MFJ-711B for $30.00. (I had already mentioned my ICE Model 430B High-Pass filter, which is $32.00). These models are for cable use, but some are available for 300-ohm twin-lead as well if you need that type.

Sometimes, you can find good condition low-pass filters at swapfests-- B&W, EF Johnson, and others, for very low prices--$5.00 to $15.00. The better quality ones are usually in COPPER cases, but some are ALUMINUM or other metal-type enclosures.

73,
Charlie, N5TD

WEST GULF DIVISION NEWSLETTER (EXTRA)

IN THIS ISSUE:

HamCom 2008 Announcement
DX Banquet at HamCom 2008
Major Event Calendar

HAMCOM 2008 ANNOUNCEMENT

CQ-CQ-CQ HAM-COM 2008 IS JUNE 13-14 AT THE PLANO CENTRE IN PLANO, TX!
VISIT OUR WEB SITE: www.hamcom.org.

This is Ham-Com's 30th continuous year of operation! To celebrate we will host the ARRL West Gulf Division Convention and give away an extraordinary array of prizes. The Grand Prize is a Yaesu 857D which will be awarded at 5:00 p.m. on Saturday, June 14. The anniversary celebration includes a special door prize giveaway every hour from 9:00 a.m. to 6:00 p.m. each day.

A total of 18 Alinco DJ-V17T 144 MHz FM 5 Watt HTs will be given away during the event. Winners must be present to claim the Grand Prize or any of the other door prizes offered at the event.

Complete information about the event, hours of operation, prizes, commercial exhibitors, flea markets, speakers and workshops is available at www.hamcom.org.

General admission tickets are available online at a discount through May 30 for $8.00 each ($10.00 at the door on event days). Mail-in tickets will be accepted through April 30, 2008. Just click on the link below the Grand Prize and hourly prize pictures to download the mail-in ticket form in Adobe PDF format. As in previous years, Ham-Com DOES NOT mail tickets. Pre-paid tickets will be available for pick-up at the admission desk on either day of the event beginning at 8:00 a.m.

We expanded the number of indoor flea market tables this year. Outdoor tables are still available and there will be plenty of space in the tailgate market operated by the McKinney and Plano clubs.

Volunteers earn a free ticket for each two (2) hour shift worked. We are soliciting programs for the event and have made the sign-up process very easy. For complete information visit www.hamcom.org and click on the big red "Volunteers" or "Presenters" buttons on the upper right of any page.

EARN $25.00 FOR YOUR CLUB!

Ham-Com is continuing its efforts to help area clubs. What we propose is something that will benefit the clubs and our event. It's as easy as 1-2-3.

Here's the deal:

1. Let us know via e-mail that you want to participate in helping promote Ham-Com 2008.

2. Place our HTML or Java code snippet on your club web site splash (intro)
page.*

3. That's all...we'll do the rest. Just run the banner on your web site during March, April and May and we'll pay your club $25.00. And, we'll give the club web site that generates the largest number of views and unique click-throughs $100.00. The sooner you get started, the better the chance that you'll have to earn $100.00 for your club! Each club will receive customized HTML code that will start the counter and keep track of the totals we need to determine the winner. On June 14, 2008, the Ham-Com, Inc.
Board of Directors will announce the winner. Participating clubs and the overall winner will receive their checks by August 1, 2008.

Why are we doing this? The reason is simple: We think it's important to spend money generated by the event where it will do the most good. We could, of course, buy banner ad space on large national sites. While that will certainly build interest and traffic on our web site, it won't help increase attendance very much. We believe that the best results will come from the clubs that directly support us and whose members attend our event. Over 25 clubs and organizations signed up to get their $25.00 donations the day of the announcement.

Please send e-mail to office@... and we'll help you get started.
Thank you again for your support of Ham-Com and other area Hamfests!

73

Barry A. Goldblatt, WA5KXX
Event Manager, Ham-Com, Inc.

* The Ham-Com 2008 event banner must appear on the first page of your web site that visitors see to be eligible for $25.00 payment and award of the $100.00 prize for the highest number of views and click-through traffic.

DX BANQUET AT HAMCOM 2008

Fellow DXers:

The Lone Star DX Association is proud to announce that Eric Scace K3NA, the co-leader from the recent record breaking VP6DX Ducie Island DXpedition will be the keynote speaker for the LSDXA's DX Dinner Banquet at HamCom June 13-14 at the Plano Center, north of Dallas, according to LSDXA President Tim Pearson, K5AC.

Dinner tickets are $36.00 each and may be ordered through the Ham Com 2008 web site at http://www.hamcom.org and click on the DX dinner block. The dinner will be in the ballroom of the Holiday Inn Express at 700 Central Expressway (U.S.
Highway 75)at 6:30 p.m.

Additional information on Ham Com itself can also be found on the website. General admission is $8 each.

Scace has considerable DXpedition experience having been a team member of thefollowing DXpeditions: FO0DX Clipperton Island, VK9ML Mellish Reef, YK0A Syria, 3D2XX Rotuma, ZA1A Albania, AH3C/KH5J Jarvis Island, plus Lord Howe Island and Norfolk Island.

In addition, he has operated from Saudi Arabia, Azerbaijan, Curacao, ITU Geneva, Puerto Rico, Israel, Seychelles, China, Australia, Aland Island, France, Spain, Canada, Finland, Sweden, Switzerland, and European Russia.

According to the Ducie Island website, the DXpedition made 183,686 QSOs, a DXpedition record. The Ducie website is http://ducie2008.dl1mgb.com/ .

Other DX program speakers and programs will be announced later.

In addition, the LSDXA http://www.dxer.org click on LSDXA, will have its usual plethora of door prizes for both the DX dinner and the two days of DX programs at Ham Com.

Donors already committed include: Alpha Radio Products, Array Solutions-WX0B, Buddipole, Ten-Tec, QRZ DX, and W4MPY. The list will continue to grow up until dinner and program times.

Tom Anderson, WW5L, an LSDXA vice-president and its information director, said both the DX dinner and the daily DX programs will have some new donors in 2008, in addition to those contributing in past years. "If you miss the DX dinner or the DX programs, you lose!" Anderson said.

MAJOR EVENT CALENDAR

29 March -- Amateur Radio Club of Parker County Hamfest, Weatherford National Guard Armory, 719 Charles Street, Weatherford, TX. Talk-In: 147.04 (PL 110.9) For more information check:

http://www.qsl.net/w5pc/

19 April -- Temple Amateur Radio Club's HamEXPO, Bell County Expo Center, 301 West Loop 121, Belton, TX. Talk-In: 146.820 (PL 123.0) For more information check: http://www.beltonhamexpo.org

17 May -- Panhandle Amateur Radio Club Swapfest/Picnic, Thompson Park -- Area 17, NE 24th and US 287, Amarillo, TX. Talk-In: 146.340/146.940 (PL 88.5) For more information check: http://www.orgsites.com/tx/w5wx

13-14 June -- West Gulf Division Convention (Ham-Com 2008), Plano Centre, 2000 East Spring Creek Parkway, Plano TX. Talk-In: 147.18 (PL 107.2) For more information check: http://www.hamcom.org/

21 June -- Lufkin Hamfest, Denman Avenue Baptist Church, 1807 East Denman Avenue, Lufkin, TX. Talk-In: 146.94- (PL 141.3) For more information check: http://www.lufkinhamfest.com

12 July -- Tidelands ARS Hamfest, Doyle Convention Center, 2010 5th Avenue North at 21st Street North, Texas City, TX. Talk-In: 147.140 (PL 167.9), 442.025 (PL 103.5) For more information check: http://www.tidelands.org

18-19 July -- Oklahoma State Convention (Ham Holiday 2008), Oklahoma State Fairgrounds, Expo Hall, NW 10th & North May, Oklahoma City, OK. Talk-In: 146.82/22 For more information check: http://www.hamholiday.org

1-2 August -- Texas State Convention (Austin Summerfest), Wyndham Garden Hotel, 3401 South IH-35, Austin, TX. Talk-In: 146.34/94 For more information check: http://www.austinsummerfest.org

11 October -- Paris Texas Radio Group Hamfest, Red River Valley Fairgrounds, 570 East Center Street, Paris, TX. Talk-In: 147.040+ (PL 100) For more information check: http://www.paristexasradio.com

24-25 October -- Texoma Hamarama, Ardmore Convention Center, 2401 North Rockford Road, Ardmore, OK. Talk-In: 146.97 For more information check: http://www.angelfire.com/tx5/TexomaHamarama/

Subject: WEST GULF DIVISION BULLETIN FOR TEXAS
To: wr1tx1@...

NEWS RELEASE
15 MARCH 2008
FRANK KRIZAN, KR1ZAN
1005 TALLEY RD
GARLAND, TX 75044
KR1ZAN@...

- -
TEXAS HAMS NOW HAVE SIMPLIFIED LICENSE PLATE RENEWAL PROCESS

The Special Registration Branch of the Texas Department of
Transportation has confirmed that Texas amateur radio license plates
("Radio Operator") will now have a combined registration and special
plate renewal notice beginning with March 2008 renewals.

Licensed amateur radio operators will no longer have to send in the
$1.00 special plate renewal annually and then process a separate
registration renewal. This should also resolve the confusion of
multiple vehicles bearing the same call sign which resulted in only
registration for one vehicle being sent. Now, everything will be
handled as a single renewal/registration for each vehicle.

The Special Registration Branch began sending the combined notices for
March renewals with only two weeks prior to expiration. April and May
renewals should have at least 3 weeks notice prior to expiration and by
June the system should be on track with at least a month's notice prior
to expiration.

Texas amateur radio operators who would like to obtain Radio Operator
plates (the application fee is only $2.00 plus the vehicle
registration) can find more information plus an application form at
http://rts.texasonline.state.tx.us/NASApp/txdotrts/SpecialPlateOrderServlet?grpid=80&pltid

Reply-To: dstar_digital@yahoogroups.com
To: dstar_digital@yahoogroups.com

I have for sale Icom IC-91AD S/N with rs-91, hm 31-speaker mic, cp 19r cig lighter cable, rs-91 programming software with cable. Includes original box, manuals and warranty card. All for $380.00 bought new from HRO Oakland 12/10/07 s/n 0503601. This HT has always been on my desk on the lowboy mount. You can call the store and ask the manager, he will vouch for me. The rig is still under factory warranty and in case of any problems we will make sure it gets repaired under warranty. We are a non-smoker. I have sold a lot on eHam and eBay as 479fms my feedback is 100% $380.00 includes shipping and insurance within the U.S. If you have any questions call me between 10am/10pm PDT. I use Paypal or certified check or postal MO.

4017. Charlene Czerwieski Former TARC Member SK

Yahoo group: Temple_ARC
Date: 2008-03-21 10:09:30 UTC
From: Steve S. Bosshard (NU5D)
Topic: 4017 Message: 4017

John and Charlene *Czerwieski were active TARC members in the early '80s. John died about 10 years ago. Seems like their calls were N5HUL and N5HUJ, but I am going from memory (Mike can probably help me out) - their licenses have since lapsed.

4019. new dx call's

Yahoo group: Temple_ARC
Date: 2008-03-21 15:04:16 UTC
From: James Kennedy
Topic: 4019 Message: 4019

On August 8, 2007 the International Telecommunications Union (ITU) replaced the callsign series prefix block of Bosnia and Herzegovina (BiH) from T9 to E7. Effective today at 2300Z (March 22 1200 AM in Bosnia and Herzegovina) Amateur Radio operators from BiH will begin using their new E7 callsigns. T93Y (soon to be E73TW), Boris Knezovia, says the Communications Regulatory Agency issued only two and three letter callsigns suffixes. Applications for one letter suffixes can be applied for starting April 14th and hopefully being issued in late May 2008. More details (in Bosnian) can be found at http://www.cra.ba/bs/public-affairs/pressr/default.aspx?cid=4822. This should generate a lot of interest on the bands late tonight and early tomorrow. See you in the Pileups!

From: Warren Rowe
Topic: 4019 Message: 4020

This means two things for me personally:

1) I get to chase a new prefix (I already have T9 in the log for WPX)
2) I own an Amateur Radio postage stamp that celebrates Amateur Radio in Bosnia & Herzegovina that shows the T9 prefix in the upper lefthand corner. I think the value is about to go up on it now due to this news; I might need to buy a couple more of these stamps...

I remember John and Charlene very well. Charlene remained friends with me and Robert for several years after John passed away. I seem to remember they both moved to Desoto near Dallas to be near her son when John's health began to fail. I eventually lost contat with her after that when Robert and my Mother both got so sick and I had my hands full. This is really sad news to me. My prayers are with the family. Eula Jett

4022. Complete Computer System for SALE

Yahoo group: Temple_ARC
Date: 2008-03-21 18:36:16 UTC
From: Charlie Schlieper
Topic: 4022 Message: 4022

I have a complete (but OLDER) computer system for sale, PS-2 MOUSE, KEYBOARD, SVGA Color MONITOR, AMPLIFIED SPEAKERS (GOOD quality), 56x CDROM, FLOPPY Drive, MODEM, "Calibrated SOUND-CARD for Ham Radio" (11025.42 Hz +38ppm), loaded with Ham Radio Software which is NOT required to register-- (either freeware or shareware), HamScope, MultiPSK, DigiPan, MMSSTV, MMTTY, TrakSAT 409, STREAM, THROB, AGWPE & UISS (packet), Hellschreiber, MT-63, WinPSK31 & WinPSK63, STSPLUS-123, ZakaNaka-124, Domino-FEC, CHIP-64, Two-Tone Utility pgm, ComTest Utility pgm, CoaxTrap Design pgm, WireCalc pgm, dB-Calc pgm, VbDigi Digital Modes pgm, and an Unregistered (free-trial version) of MixW. This is an older and fairly SLOW system, but it works fine on many ham radio programs. (It is NOT fast enough for some DIGITAL MODE software that is out) It has Windows-98se as a platform, with a CODE that was purchased in Fort Worth.

It's a nice CLEAN system -- complete, for $50.00

Must be picked up locally. Does NOT come with a LIFE-TIME WARRANTY!!!

If we understand each other, it can be yours... I need the storage space.

73,
Charlie

4025. Advances in Batteries...

Yahoo group: Temple_ARC
Date: 2008-03-22 14:44:19 UTC
From: Charlie Schlieper
Topic: 4025 Message: 4025

News items relating to advances in "BATTERY TECHNOLOGY" are continually showing up on the Web; however, you may not be able to believe ALL that you see, or read. For instance, the recent article surfacing-- "Scientists Invent a 30 Year Continuous Laptop Battery?" Betavoltaic batteries have been around for some time, and by-the-way, from the research I've done, they do seem to be considered by most people to be a "Nuclear" battery! (The article says they're not.) It is well known that these types of batteries can run 10 years or so, and are quite remarkable in their technology. They typically use a radioactive isotope (Tritium) to emit Beta particles down into semiconductor substrates to transform energy. Their typical use, so far, has been in remote isolated areas. Although Tritium has a half-life of 12 years, the energy-load operating life is usually considered to be about 10 years. While on-going research is continually producing progress in battery technology, I am still dubious about the 30-year laptop battery. Is it a hoax, or is it real?

Charlie, N5TD

4026. RE: [TARC] Advances in Batteries...

Yahoo group: Temple_ARC
Date: 2008-03-22 15:03:17 UTC
From: Paul Finch
Topic: 4025 Message: 4026

Charlie,

The problem I see with a 30 year laptop battery is the laptop is basically obsolete in 6 months and almost unusable in 3 years because of advances in technology, hardware and software. What good would it be to have a battery that lasted that long unless the manufactures decide to make a common size and format slot across all manufactures. FAT CHANCE! <BIG GRIN>

What I would like to see is how these batteries react to extreme cold, like on Amateur Radio balloon launches. Guess I will start doing Googles on this technology. Have you ever seen one of the batteries and how much do they cost? Bet they a pretty penny right now.

The minutes from the March 6 meeting are now available on the TARC email reflector for your consumption.

4037. Five-Band Trap Dipole Antenna

Yahoo group: Temple_ARC
Date: 2008-03-27 20:34:57 UTC
From: Charlie Schlieper
Topic: 4037 Message: 4037

I was checking out my completed five-band DIPOLE antenna, which consists of eight conventional TRAPS (four on each leg), and worked an LU6 down in Argentina, on 28.425 kHz USB, with a 5/4 to 5/5 report. The dipole center was ONLY 15-feet off the ground, in a temporary test mode. This antenna resulted in a lot of foreshortening of lengths, and required optimizing those exact lengths to make it perfect for the tuned traps. I pushed it to 100-watts for a test, and it survived well. Some of the caps in the traps are only capable of 3,000-volts, so it would NOT be a good antenna to run a high-powered amp with; however, this antenna was only planned for use at portable field events-- such as JOTA and Field Day, with typically 100-watt rigs.

Charlie, glad the antennae turned out to be a good one. I am getting my center holders together for you to check out and then I can order whatever I will need to finish one out.

I built a little two trap wire antennae but have not been able to check it out yet. Maybe we can get together later tomorrow and check it out.
Take care, give Kay my best.

Hi Cliff,

Dave Jordon told me y'all built another W5GI antenna for you,
just like the one he has. That is good. Hope you both become more active
in HF communications, and have fun doing it. It seems that most of todays
new hams are not interested in doing much except operating a 2-meter FM
repeater. They really miss a lot by not seeking out so much. The hobby is
much like anything else in life-- the more you put into it, the more you get
out.

Charlie

4040. Replies on the TARC Reflector...

Yahoo group: Temple_ARC
Date: 2008-03-28 03:18:25 UTC
From: Charlie Schlieper
Topic: 4040 Message: 4040

I just wanted to explain something about choosing "REPLY" vs "REPLY ALL" on the TARC reflector. In the early days of the reflector, things were setup differently, such that choosing "REPLY" would just send it back to the individual, and "REPLY ALL" would go back to everyone on the reflector.

I seem to have a problem remembering that it is different now. Several times lately, I have made the mistake of choosing "REPLY" thinking it would ONLY go back to the person intended. I am NOT complaining, as this is clearly MY mistake. I simply must learn not to do this. My appologies to all, for making this mistake.

Tnx,

Charlie, N5TD

An LU on a temporary dipole setup...way to go, Charlie!!!

Thinking about Field Day, I'm considering bringing my MFJ-1625 balcony antenna to play with at FD this year. If I do, I will be setting it up as a true vertical antenna and hopefully with more than the three counterpoise wires I am using now.

Also, anyone have a 6m and/or 2m Yagi he or she could possibly spare for FD? I would like to set up something for 6m and 2m CW/SSB at the least!

For a short time Reply went only to the originator and reply all to the entire list. This was changed because many respondents did so thinking their reply went to the entire list, only to find out that it did not. This resulted in the bulk of the list not knowing whether a question had been answered or not. Secondly, the bulk of the membership did not benefit from the wealth of information contained in the reply because that reply became unintentionally private and was not shared with the rest of the list.

Fact is many folks are not familiar with the finer points of these lists, and the change was made to better distribute information to the list. Anyhow, that is the reasoning behind the change.

Club Programs using Computer Presentations...

Unknowingly, if someone tries to use the large proped-up projector screen at the church, the presentation will appear fuzzy and out-of-focus! The problem is the screen, and not the projector. You will get better results when using an alternate screen, or even the back wall produces a much sharper image.

I do not go thru the fire wall . I route things under the body and come in the back wall of the cab. Usually I have found a knock out hole there or under the rear of the seat with a rubber seal that is about 2" x 1" and I just slice it and let it form a seal arond all the wires. When removing equipment , just pull the wires out and it will seal back up. This is double handy when passing pre-made cables with fittings on the ends. Chuck Wq5B

4054. Important notice for D-Star users

Yahoo group: Temple_ARC
Date: 2008-04-01 16:00:19 UTC
From: john_ke5c
Topic: 4054 Message: 4054

Sometime during the next two weeks both K5CTX and W5HAT will move over to the new (G2) Icom gateway software. This interconnect is not compatible with the old (G1), and once this transition occurs, you will not have access to the gateway until you register and your registration is activated (by NU5D or W5NCD or their agent - me). As before, registering on one gateway registers you for the Icom gateway interconnect system, so it does not really matter on which gateway you register. To add to the confusion, the transition will occur first on K5CTX and a day or two later on W5NCD. I will post a warning about the actual transition date. If you are a D-Star user of these gateways, please register now by going to:

http://dsync.dstarusers.org/GW2Status.pl

and clicking the link for K5CTX. This will take you to the K5CTX G2 server where you can start your registration. We'd like to get folks registered ahead of time so once we transition to running the gateway on the the new software, folks will be good to go. Nothing changes in how you access the repeaters or the gateway. We are told a new www.dstarusers.org page is in the works for G2, but expect some confusion at first.

Interdependency, The Need For Others In Order To Succeed
By Norm Fusaro, W3IZ

All relationships require effort from all who are involved. Member recruiting and retention has long been a challenge for local clubs and cultivating interpersonal relationships with your club members is important to achieving the goals of the club and its members.

As people we are independent, capable of our own thoughts, actions and opinions but as members of society we are interdependent and rely on others to fill certain needs. As radio amateurs our interdependence is as basic as the need to have another radio operator to establish a contact. The local club fills a need beyond this basic illustration and provides where we can go to meet with friends and share knowledge and experiences.

If the needs of the individual are the Ying then the Yang must be needs of the club as an organization. Clubs need members to manage club business and perform the jobs required to operate a successful club. One does not have to look too far to see that successful clubs rely on synergistic roles that benefit both the individual and the organization. If a club provides a way for non hams to get licensed then the club will recruit new members. The club that offers classes for licensed hams to upgrade will retain members. Active hams that

are willing to share their experience will teach the newcomers who then become club members and so-on and so-on.

Clubs that seek perfection and a world all the members get along and agree on everything are striving for an unrealistic goal and often end up in discontent. Healthy and active clubs tend to work together as a group toward a common goal. Setting the goal can be a democratic process, which in itself is a healthy activity, however once the objective is set it takes the effort of everyone to achieve the result. For club leadership, it is your job to keep the members focused on the mission. Club members also have a responsibility to the club by supporting the mission and not undermining the project just so they can say "I told you so."

People joined your club to get involved. One of the best ways to keep club members is to include them in club business and activities and most importantly, recognize your people for their contributions to the club. Your club newsletter is a terrific vehicle for recognizing members who participate in club activities and programs. Sometimes a special presentation or award may be in line with a member's exemplary involvement. The actual deed is not as important as is the recognition of the people who make it all possible. When others see that the club appreciates the work of the members then more people will be willing to take on jobs and run for office. Mutual effort must be ongoing if a club is to recruit and retain members.

--

Station Locator Service New For Field Day 2008
From ARRL Letter

This year, for the first time, the ARRL has put together a Station Locator to help amateurs or those interested in Amateur Radio find a Field Day site near them. According to ARRL Field Day Manager Dan Henderson, N1ND, many amateurs have been asking for something like this for many years.

If your group would like to be a part of the Station Locator Service, it's easy to get started. Just go to the Field Day Station Locator Web site <http://www.arrl.org/contests/announcements/fd/locator.php> and follow the instructions.

To help you out, Henderson has prepared a FAQ for the Field Day Station
Locator.

Q) How does our Field Day site get listed on the map?
A) A club official or Field Day Chairman needs to go to the Web site. Once there, click on the link for "Add a Station" and follow the instructions.

Q) I put in the name of the park where we will be holding Field Day
but
got the message that the program can't find it. What do I do?
A) You should use a street address for the location. Unfortunately,
the
mapping program doesn't have a 100 percent complete database of park
names and public site names. You may use a latitude/longitude --
enter
the values separated by a comma (e.g. 42.345N, 85.445W) and set the
city
to NONE).

Q) I put in a street address but the map locator put me it in a wrong
location on the street. What do I do?
A) While in the data input or edit screen, use your cursor to move
the
red "pin" to the correct location on the map.

Q) What if I put in the wrong information or something about our
Field
Day operation changes?
A) The person who input the data will be able to edit the entry.
Simply
follow the "Add a Station" link and then select "Edit this entry"
next
to the one to correct.

Q). I tried to enter my club's information, but I was denied access.
What do I do?
A) To help ensure that only one person is managing a club's entry,
you
must be logged onto the site with your ARRL member ID and password.
If
you are not an ARRL member, ask a member of the club who is to be
responsible for adding the club's information to the site.

Q) I am looking for a Field Day operation to attend. How do I use the
site?
A) Begin by typing in the city and state where you would like to
search,
something like "Brooklyn, New York" or "Anaheim, California."
Depending
on the geographic location, the map will take you to the area you
list.
If a Field Day operation has been registered for that general area, a
red "pin" will show on the map. If you click on the red pin, the
details
for that site will appear in the box on the right hand side of the
screen. If you don't see a red pin, scroll out a level to find one
near
the location you listed. It is also possible to drag the map to other
areas by holding down the left button on your mouse and then moving

the
map around. You can also scroll in and out using the +/- buttons on
the
left side of the map. You may also zoom in and center by
double-clicking
with the mouse near the red pin.

Q) I found a red pin near where I will be. Where do I find the
information on that site?
A) Each entry has a contact person with either an e-mail address or
phone number who should be able to help you. It will appear on the
right
side of the box when you click on the red pin for an entry.

Q) I found an entry with wrong information. What should I do?
A) Please contact the person whose name appears as the contact person
for that site. ARRL HQ does not have detailed information on the
site.

Q) I want to check on our club's information. What should I do?
A) Type in the call sign that will be used and you will be taken to
the
location and club information.

ARRL Field Day will be held June 28-29. For more information, please
visit the Field Day Web page <http://www.arrl.org/fieldday>.

--

Netiquette

Today many people use e-mail reflectors and internet forums as a way
to share ideas, thoughts and opinions on just about anything and
everything. There are literally millions of people participating in
this virtual town hall.

Too often we look at words on a screen and forget that we are
actually interfacing with human beings. When people used to use pen
and paper to exchange ideas there were numerous opportunities to
explore our emotions and organize our thoughts before we sent a
message to another person. However today many are quick to react and
in a split second can fire off an often hurtful and degrading
message.

Here is a great web page about etiquette on the internet or
"netiquette" as it has been coined.

Looking For Ways to Show Off Ham Radio?
Ward Silver, N0AX

We all know about Field Day and many clubs make an extra effort to set up in a public place, just to publicize our favorite hobby. But outside of Field Day, the opportunities may not be quite so obvious. Here's a story about a club that scored big for Amateur Radio and had a great time in the process.

Readers of Make Magazine (http://makezine.com) know about the massive demonstrations of hands-on do-stuff activities called Make's Faire. (http://makerfaire.com) With a theme of "Build, craft, hack, play, make", I'll bet you're interested already! Make is just one of the many "do-it-yourself" centers of activity - magazines, Web sites, blogs, TV shows - that are enjoying a resurgence of interest as folks take an interest in "what's under the hood." Maker Faire draws thousands of motivated, interested, tech-friendly attendees that wander the aisles soaking up the various activities on display. They sound like ham radio's kind of folks, don't they? Yes, they do, and more than 25,000 attended the Austin Maker Faire in October 2007.

If you browse the Maker Faire Web site, you'll see that under the "Participate" menu, in the "Call for Makers" selection, Ham Radio is a prominent entry! Last year, the Austin Amateur Radio Club (http://www.austinhams.org) took the lead in setting up shop for Maker Faire and drew a steady stream of visitors, from kids eager to shout into the microphone connected to an oscilloscope to adults and teens interested in learning more about Amateur Radio. Led by Jeff Schmidt N5MNW, the club did such a good job of illustrating the many interesting activities of ham radio that the organizers awarded them an Editor's Choice prize! Well done!

There is an upcoming Maker Faire in San Mateo, CA and last year the event drew over 40,000 makers. These large events are a small portion of the many smaller events around the country that take place in every town in every state. There are science fairs, technology demonstrations, career days, street festivals, and so on. The organizers are often seeking interesting displays and exhibits, particularly from local groups. They are not so much interested in slick, commercial displays - they want real people, just like you, to show off their skills and what interests them. It's not necessary to assemble a huge and intimidating display of equipment - just start building a kit, hook up a meter and let people measure their skin resistance, set out some books and fliers (many available from the ARRL), and prepare to answer lots of questions! Space is often available just for the offering - send an email or make a phone call and find out.

For a good look at the enthusiasm generated by the Maker Faire, watch the Quicktime movie at http://www.rocketboom.net/video/maker_faire/austin/bre.mov. (This takes a little while to load...) The do-it-yourself ethic is

returning, like the swallows to Capistrano. Your club will enjoy presenting ham radio - where hands-on lives on! As the Maker Faire folks say, "This is the place to be, right now, in the world today!" Does ham radio have a place in that world?
Are you kidding - we helped invent it!

4065. Aprs and Dstar

Yahoo group: Temple_ARC
Date: 2008-04-03 13:14:27 UTC
From: Gerald Richmond
Topic: 4065 Message: 4065

Ok got a question regarding the Local D-star guros and APRS input.

What is your Input point for the Dstar packets to the APRS network.

I'm getting emails that this area (Temple) recently has been congesting the APRS paths.

I am finding that since the Dstar APRS data has been showing up, there is some major doubling of packets to the TCPIP points.

Message I am getting since the Dstar APRS went on the air is as follows. "This causes serious congestion in the APRS network and errors when plotting the station's route on a map."

I see the entry point is N5TD-15. Is this the Igate for the Dstar data on APRS??? Is the Dstar being transmitted in analog or digital for the APRS signal??

thanks

G

4073. Little wind at South Mountain

Yahoo group: Temple_ARC
Date: 2008-04-10 16:54:54 UTC
From: Steve S. Bosshard (NU5D)
Topic: 4073 Message: 4073

An old hackberry tree was uprooted and a 2M horizontal yagi and a 70CM long yagi got torn up - the antennas were just under 200 ft up. A DB410 UHF antenna came loose in the clamps but the mast looks ok. In Temple a rotted limb on an ash tree broke off and landed across the bed cover on my truck - had to cut wood before breakfast - no pic of the ash tree - did snap a couple of pics from South mountain - bent antenna and rain gauge = little over 1/2 " and some broken limbs.

Typical thunderstorm in Texas. 73 Steve NU5D

That's pretty much what happened, at least in a lot of parts of Texas, but not everyone was lucky. Breckenridge was hammered by a violent tornado, and several areas in Central Texas (including just north and west of Temple) were hit.

Concerning the confirmed sighting of a tornado around the 305-306 mile markers on I-35, the NWS has said on the NWS Fort Worth-Dallas website that they may come and inspect the damage from that storm as well as other damage in and around the Temple-Belton area. If the NWS sends a team or two down to visit, it will likely be Friday when they tour the area.

I'll be watching for the report if one is issued, and I will either provide the link to the report or I will cut and paste it and post it on the reflector.

4075. DStar Users - Important #2

Yahoo group: Temple_ARC
Date: 2008-04-11 14:42:04 UTC
From: john_ke5c
Topic: 4075 Message: 4075

Thanks to the entire list, BTW, for the bandwidth. K5CTX has been on the second generation gateway software since Tuesday, and W5HAT will transition tomorrow (Saturday). You need to be aware of several developments. Reply to me OFF LIST with any questions.

(1) The G2 network is still being fine-tuned by ICOM. In the registration steps below, you may receive an error message. If so, wait a few hours and try later.

(2) You do not need to register to use either repeater, but you do to use the ICOM (international) gateway system. Once registered on any DStar gateway that is on the system, you are registered for the entire system. Registration requires two steps on your part. Most of you have completed the "A" step, but few have completed the "B" step.

(2A) First you register as a user on the gateway system. Go to https://66.196.13.25/Dstar.do accepting any certificates temporarily when your browser asks you. Click on the Register button and fill out the form. The system owners then approve your registration but the email notification is not working. Everyone that has applied to date is now approved. This is done on an at least daily basis. If you have done this already, you don't need to do it again, and actually you will find out you can't if you try.

(2B) Once you are approved (you all likely are), you must go back and register a radio-callsign if you want to actually use the system (why else would you register?). Go back to https://66.196.13.25/Dstar.do and click the personal information menu. A form page will open with eight lines where you can enter information about your radio-callsign (also referred to in Japanese English as a "terminal"). Most of you will have only one radio-callsign. Remember a DStar radio-callsign includes an up to seven character amateur callsign and an eighth character which is usually blank (a space, not a null). For now just enter one radio-callsign as follows:

(2B.1) Click the far left checkbox on line 1.

(2B.2) Click the "initial" box to place the cursor in this box. Now hit the spacebar to put a space character in this box. This is VERY IMPORTANT.

(2B.3) Leave the RPT box unchecked.

(2B.4) Move the cursor to the "pcname" box. Enter your callsign in lower-case. Please, lower-case!

(2B.5) Click the update button. As before, if you receive an error, just try an hour or two later.

(3) For fun, click the user information menu to see who else is registered on K5CTX. Click the gateway information menu to see the other gateways on G2. Click the terminal information menu and I'll explain that later, but you can try to figure it out if you want - you can't hurt anything. Enter something in one of the three filter boxes and click filter. Or leave all three blank and click filter.

(4) I think K5CTX B and W5HAT C will be participating this Sunday at 11:30 AM in the first "multicast net" test - I am waiting for a confirmation message. Please try to listen and check in if you are free. To participate, program UR to /SUNDAY, RPT1 to K5CTX^^B or W5HAT^^C (^ is a space), and RPT2 to K5CTX^^G or W5HAT^^G. Multicast is a key emergency management feature of the DStar gateway system. Currently gateways in Canada and several states are scheduled to participate.

(5) During the transition from G1 to G2, DStar monitor is being redone and has not been reinstalled. This means you will no longer show up on the dstarusers.org page which is G1 gateways only at this time, and DPRS will not work on your radio since it relies on that package. As a result, our local wide-area IGates (KE5C-15 and W5NCD-15) will be inoperable for two to four weeks since there is some software sharing with DStar monitor. This will all get going again in two to four weeks.

(6) ICOM has pushed back the G1 gateway drop dead date two weeks, so we are well ahead of the curve.

73 - John

4076. Needing Help With Ham Expo Gates

Yahoo group: Temple_ARC
Date: 2008-04-11 16:25:02 UTC
From: Warren Rowe
Topic: 4076 Message: 4076

Everyone, your help is truly needed at Ham Expo. We are in need of people to help man the gates. I am coordinating the gate assignments this time around, so I am humbly asking help from anyone wishing to work a shift or two. These are one-hour shifts, so this shouldn't take up very much time. I'm even working a shift or two, so I'll be around and close by to help if needed.

If you've already offered to help, thank you! I already have a requested shift time from Jim Coleman and Roy Wells (6:30 am to 8:00 am at the northwest door). If anyone else has a time in which he or she would like to work, please let me know soon! If you don't care when you handle a shift but just want to help man the gates for a while, that's fine too; just let me know.

Darwin, I would like to talk to you concerning how you want to handle the change table.

Thank you in advance to everyone who is helping to make Ham Expo a success again!

Warren, WR1TX

Everyone, your help is truly needed at Ham Expo. We are in need of people to help man the gates. I am coordinating the gate assignments this time around, so I am humbly asking help from anyone wishing to work a shift or two. These are one-hour shifts, so this shouldn't take up very much time. I'm even working a shift or two, so I'll be around and close by to help if needed.

If you've already offered to help, thank you! I already have a requested shift time from Jim Coleman and Roy Wells (6:30 am to 8:00 am at the northwest door). If anyone else has a time in which he or she would like to work, please let me know soon! If you don't care when you handle a shift but just want to help man the gates for a while, that's fine too; just let me know.

Darwin, I would like to talk to you concerning how you want to handle the change table.

Thank you in advance to everyone who is helping to make Ham Expo a success again!

Warren, WR1TX

Warren,

I have sent your request to our group to see who all would be interested in assisting you. I have asked them to get back to me ASAP so I can get you a head count.

If we can be of any further assistance please let me know.

Thanks,

Tom Chapman
President

4087. New Website Up and Running...

Yahoo group: Temple_ARC
Date: 2008-04-13 04:42:01 UTC
From: Warren Rowe
Topic: 4087 Message: 4087

I have a new website that has just gone online. You'll certainly find some of the usual info the average ham might find (Amateur Radio and weather), but what you find will pertain more to Central Texas than anywhere else. I am certainly open to those who might like to see a particular type of content concerning Amateur Radio that might not be able to place it anywhere else due to certain constraints or by unforeseeable circumstances. Contact me by email for more information if you might be interested.

Oh, yes...the URL:

http://www.wr1tx.net

It's not much as of yet, but I'm working on it! Let me know what you think, and I'll try to incorporate changes where applicable.

Warren, WR1TX

4090. Gate Admissions Help for Ham Expo

Yahoo group: Temple_ARC
Date: 2008-04-16 02:52:12 UTC
From: Warren Rowe
Topic: 4090 Message: 4090

A big "Thank You!" to those who have offered to help out with the gate admissions for Saturday. I am still looking for a few more who might want to help out, though. Right now I have the shifts set up for an hour apiece for each of the two entrances that will be used for admissions. But if a few more sign up to help, even if it's just for 30 minutes, the shift length for each could drop so those who work them can also enjoy the fest a little bit more.

So if you are interested in helping with the gates, or even with raffle tickets, PA announcements, or just about any other thing...let us know so we can get you set up.

Thanks in advance, and we'll see you Friday and Saturday!

Warren, WR1TX

4093. Fwd: North Texas ARRL Section News, April 18, 2008

Yahoo group: Temple_ARC
Date: 2008-04-18 16:09:04 UTC
From: Warren Rowe
Topic: 4093 Message: 4093

From Tom Blackwell, N5GAR, ARRL North Texas Section Manager...he will be at Ham Expo this weekend, and he wants to meet everyone from TARC and elsewhere!

Warren, WR1TX

---------- Forwarded message ----------
From: ARRL NTX Section <memberlist@...>
Date: Apr 18, 2008 8:19 AM
Subject: North Texas ARRL Section News, April 18, 2008
To: wr1tx1@...

The Dayton Hamvention has announced that Tom McDermott, N5EG, is the winner of its Technical Excellence Award for 2008. He founded the Texas Packet Radio Society.

http://www.hamvention.org/hv2008/awards/te2008.html

"Tom has been involved in many ham radio projects. He co-developed the TexNet packet switching network in 1986, based on datagram routing. In the 1990's it covered much of the south central United States." "In 1994 he developed the TAPR-AMSAT windows software development system for the DSP-93 modem, including software-based instruments (oscilloscope, spectrum analyzer, signal generator). In 1996 he wrote a textbook on Wireless Digital Communications for TAPR, and developed the TAPR VNA in 2004. These projects provide an on-going revenue stream for TAPR to help fund other activities and development projects. Tom received the ARRL technical excellence award in 2005, and is a life member of the ARRL."

"Professionally, Tom worked at Collins Radio and successor companies for 25 years in various roles from product development engineer to VP of R&D / Chief Technology Officer. He was CTO of telecom startup Chiaro Networks, and is currently in strategic planning for Fujitsu Network Communications. Tom is an active member of the IEEE Communications Society, holds 10 patents, and received the IEEE Dallas Engineer of the Year award in 2006."

He now resides in Medford, Oregon.

David Lusk, N5UV, and Jerry Keltner, KB6OJE, of the Southwest Dallas
County Amateur Radio Club (SWDCARC) recently traveled North to
participate in the Oklahoma QSO Party. They have posted videos of
their experiences here:

http://www.youtube.com/user/SWDCARC

They have plans for additional videos of events involving the club.

In 2007 the Southwest Dallas County Amateur Radio Club, W5AUY, claimed
11,086 points in the Field Day contest. Our records show that's more
than any other club in Texas, Oklahoma or in 30 additional states.

- - -

Texas Section Managers' net on 3873:

The Texas Section Managers' Net is scheduled for Tuesdays at 7:30 p.m.
on 3873 KHz., LSB. Ray Taylor, N5NAV, the South Texas Section Manager,
and I are usually present there. There are exceptions for times when
we appear at club meetings or other events, or when the band conditions
are unfavorable. With Ray's pending move from New Braunfels to San
Antonio, Mike Schwartz, KG5TL, the South Texas Section Emergency
Coordinator, has been participating in his place. It's an opportunity
for news and announcements, and for members to check in.

- - -

ARRL membership in North Texas Section continues to increase. The March
31, 2008 report shows the following totals of full and associate
members:

North Texas 4,159
South Texas 4,651
West Texas 766

Texas Total: 9,576

The North Texas Section is the 7th largest of the 71 Sections in the
United States.

Upon several occasions during the past year, I had met with Jim Barton to help him program his radios, driving over to his house in Harker Heights also to assist him. Only a week before he became a silent key, I had asked about him at coffee, as he had been noticeably absent from the local repeaters recently.

4108. Air Show Sign Up

Yahoo group: Temple_ARC
Date: 2008-05-22 13:29:20 UTC
From: k5doa@vvm.com
Topic: 4108 Message: 4108

The air show is coming up the first weekend in May (May 3,4,5) and, because of the fest, I am behind in getting the final list of volunteers together. So to help me out, please do the following.

1. If you DID NOT work the airshow in 2007 and would like to this year, drop me a note at K5DOA@... and let me know the days and time frames you would be available.

2. If you DID work the airshow in 2007 and know you will not be available this year. Drop me a note also.

3.Otherwise, I will be confirming with each of you who did volunteer last year that you will be available in the same time slots this year.

The usual airshow disclaimer. We do not go into this as an official club project because we have no ham radio related duties there (unless bad weather activated a Skywarn net). Our duties have to do with passing out and and collecting commercial radios and changing batteries when needed. But we get a front row seat to the show and each volunteer gets a free pass to all three days of the show. And a neat tee shirt to boot!

So let me know if you fit in category 1 or 2 above. And I need the info ASAP as the list is due. 73 - Darwin K5DOA

Congratulations Mark!

The GENERAL Class License has always been a significant UPGRADE step in
Amateur Radio. Good Work...
I enjoyed the Hamfest, and as usual, I picked up some bargains. Brand new
"N-Connectors" in the packages for 50? each, some special antenna parts for
only a small fraction of the new cost, a 10-element commercial grade UHF
Yagi cut for 440-450 MHz for only $5.00, etc. Buying items you need is
always nice, but one of the true joys of any hamfest-- is learning to look
for things you DON'T need, at a bargain price. Enjoy your upgrade!

4126. Echo Link Help...Please!!

Yahoo group: Temple_ARC
Date: 2008-04-27 17:14:36 UTC
From: n5pmk_randy
Topic: 4126 Message: 4126

I just recently got a new computer and I'm trying to set up echolink on it. I got the program downloaded and installed, but it times out everytime I try to connect. I don't know if it's a firewall problem, or a modem issue. When I originally installed echolink on my old computer, someone from the club remote connected to my PC and set it up for me, so, needless to say, I'm kinda lost here. If anyone can help me with this, I'd really appreciate it. Feel free to call if you think you can help. 254-368-8487. Thanks,

Randy

4140. Tour d' Temple Bicycle Rally

Yahoo group: Temple_ARC
Date: 2008-05-13 00:46:16 UTC
From: Myron Mesecke
Topic: 4140 Message: 4140

TARC will once again be assisting the Temple Kiwanis club as they present their 7th annual Tour d' Temple Bike Rally. The rally consists of 10, 25 and 50 mile routes and a 100 kilometer route. The rally starts at the Frank Mayborn center in Temple with the longer routes going out to Mother Neff state park.

The rally is Saturday May 31st and starts at 8:00 A.M. It usually lasts until about 12 noon.

Those working the shorter routes will be finished much earlier.

We need to be at the Mayborn center by 7:00 A.M. in order to get locations assigned and to be able to drive and be at your location before the rally starts.

I have 7 members signed up so far to help.

Duties are primarily to keep a watchful eye out in the area you are stationed. If you encounter any accidents, injuries or other trouble you call it in and try to assist the rider until help arrives.

We will have one of us stay with the organizers at the Mayborn center to receive and relay messages. We will try to man the rest stations, Mother Neff park and busy road intersections.

I will post more info as I get it.

Email me if you want to help.

4143. Tour d' Temple information (embarassing)

Yahoo group: Temple_ARC
Date: 2008-05-27 02:12:43 UTC
From: Myron Mesecke
Topic: 4143 Message: 4143

I seem to have misplaced the list of volunteers I had. If you are going to help Saturday May 31st with the bike rally please let me know your name and call sign.

We need to meet at the Frank Mayborn Center at 7:00 A.M.

We will be using the 146.82 repeater.

The names I am certain about are Ron W5WRE, Darwin K5DOA, Al N5AWH, Mike WB5PBS. I think there are four others who volunteered to help.

I will post some operation details Tuesday or Wednesday.

Subject: [TARC] Tour d' Temple information (embarassing)

I seem to have misplaced the list of volunteers I had. If you are going to help Saturday May 31st with the bike rally please let me know your name and call sign.

We need to meet at the Frank Mayborn Center at 7:00 A.M.

We will be using the 146.82 repeater.

The names I am certain about are Ron W5WRE, Darwin K5DOA, Al N5AWH, Mike WB5PBS. I think there are four others who volunteered to help.

I will post some operation details Tuesday or Wednesday.

Myron

4148. Tour d' Temple sign up list

Yahoo group: Temple_ARC
Date: 2008-05-28 02:48:54 UTC
From: Myron Mesecke
Topic: 4148 Message: 4148

So of course today I find the list I thought I had lost.

Here is the list as I have it.

Ron W5WRE
Darwin K5DOA
David KE5NQK
Dale W5DUK
John WD5BFS
Mike KI5M
Tom AE5AP
Mike WB5PBS
Al N5AWH
Myron N5TFK
Vern W5WDW

Of those on the list does anyone have APRS in their vehicle?
Also does anyone have a laptop with wireless internet that can be used by Mike WB5PBS at the Mayborn center? The laptop would be used to monitor the locations of the APRS vehicles. Gary Dewrell has found three hams that have APRS in their vehicles that will be working with us. There is a ham who has three trackers he has offered to install in vehicles if we find we need to borrow them. We would need to make arrangements ASAP to get them installed in time for Saturday.

Rodney Bell with Temple Kiwanis would like us to have four vehicles that can patrol the routes looking for riders in need of assistance. One each for the 10 mile and 25 mile routes and two to cover the 50 mile/100K routes west of FM 317.

We are looking good at having plenty of manpower. I have Mike WB5PBS at the Mayborn Center, Ron W5WRE at Mother Neff and myself at FM 317 at South Whitehall Rd. There are three rest stops we should be able to man. That is 6 locations so far. The four mobile route drivers makes it 10 locations. If anyone has a portable set up with enough power and a good mag mount antenna we could also be in the EMS vehicle and the tail chase truck. That would make a total of 12 locations.

Anyone who knows they will be short of time I will place them on the 10 and 25 mile routes since they will obviously finish first. But I am hoping that later in the morning I can shift one or two of the short route people to the longer routes if needed.

I will add more info tomorrow evening.

4149. More on Tour d' Temple

Yahoo group: Temple_ARC
Date: 2008-05-29 02:45:19 UTC
From: Myron Mesecke
Topic: 4149 Message: 4149

Not too much to update tonight. Mike has a laptop he can use at the Mayborn center to monitor APRS online. Tom suggests wearing a TARC shirt if you have one, volunteers usually receive a bike rally shirt so you can also wear that. Most of us will be in vehicles so I don't know how visible the shirts would be.

Be sure to bring your own munchies and drinks. We won't be at the Mayborn Center except first thing in the morning to get assignments. Once we are at our individual positions on the route we need to be self supportive. Those who find themselves stationed at the rest stops can probably grab a water there but I don't want key locations left unmanned while someone leaves to get a drink.

If you have a first aid kit it wouldn't hurt to have it with you.

If a rider approaches you for assistance we do not want to leave them unattended. Call in for help then stay with them until help arrives.

I will probably post more tomorrow after the TARC board meeting.

To all radio amateurs

SB SPCL ARL ARLX005
ARLX005 National Hurricane Center's WX4NHC Sets On-The-Air Station Test

The annual WX4NHC On-the-Air Station Test from the National Hurricane Center (NHC) in Miami takes place Saturday, May 31, from 1300-2100 UTC. "The purpose of this annual Station Test is to test all of our radio equipment, computers and antennas using as many modes and frequencies as possible. This is not a contest or simulated hurricane exercise. New equipment and software will be tested, and some operator training will also be conducted," says WX4NHC Assistant Amateur Radio Volunteer Coordinator Julio Ripoll, WD4R. He adds that WX4NHC also will be testing new computers and software as well conducting operator training.

WX4NHC will be on the air on HF, VHF and UHF, plus 2 and 30 meter APRS. Suggested SSB frequencies are 3.950, 7.268, 14.325, 21.325 and 28.525 MHz, ?QRM; WX4NHC reports that they will mostly be on 14.325 MHz and will make announcements when they change frequencies. WX4NHC also will be on the VoIP Hurricane Net 1700-1900 UTC (IRLP node 9219/EchoLink WX-TALK Conference) and on South Florida area VHF/UHF repeaters and simplex.

Stations working WX4NHC exchange call sign, signal report, location and name plus a brief weather report, such as "sunny," "rain" or "cloudy." Non-hams may submit their actual weather using the On-Line Hurricane Report Form. QSL to WD4R and include a self-addressed, stamped envelope. Do not send cards to the NHC. Due to security measures, no visitors will be allowed at NHC during the test.

Mike,

I like the idea of a TARC flag for use at some of our events. Not sure flying one at the Tour d' Temple would be appropriate since we are mostly mobile and single person stations at various points along the routes. We will be spread out from Temple to Mother Neff Park.

I like the idea and maybe it is something to look at for use at Field Day and other events were we are marking our site.

Thank you for your recommendation.

John WD5BFS

4156. ARRL cancels Field Day

Yahoo group: Temple_ARC
Date: 2008-05-30 15:16:49 UTC
From: ke5c@hot.rr.com
Topic: 4156 Message: 4156

Okay, now that you're REALLY thinking, mark your calender for June 28 and 29. TARC has a really different plan for Field Day this year. Actually, TARC has very little in the way of Field Day plans, so come on out and do whatever you want, but do come out, and let's just see what happens. We know for sure where we will meet - http://www.tedtea.org/index.php/showgrounds - and we know lots of food will be available, especially around 6 PM on Saturday but probably also for lunch that day and breakfast on Sunday. You can come out Friday (June 27) afternoon and cut some grass or help Darwin put some antennas up, or you can stick around after Sunday breakfast and help Darwin take them down. From 1 PM Saturday until Sunday morning you can operate some phone or CW or see what's going on at the GOTA station - or you can see what the GOTA station is and does. If you know anyone interested in ham radio, you could do them a favor by letting them know they are invited to visit. Perhaps more later.

Here are some pictures from the Tour d Temple 2008. Sure was fun, though fun turned into a long day. We had a great turnout. Dale Duke used his very cool home brew J Pole to hit the 82 machine from somewhere way north of Pendleton using only his 5 watt HT rig . Also, it was great meeting and working with some of the CTARC guys (Kevin (and family), Arron and "ETU" (sorry didn't get the first name) and seeing how they use APRS to pin point their QTH as well as the location of some unfortunate down bike riders. Thanks also to Mike Sherrod as net contol operator. This was the first time he used his laptop for APRS work and he had it up in no time flat. Pretty impressive. Thanks to Myron and Darwin for organizing the event. Hope Darwin made it home ok, he had a sick truck.

4165. Troubleshooting Can Be Fun

Yahoo group: Temple_ARC
Date: 2008-06-06 13:05:47 UTC
From: Charlie Schlieper
Topic: 4165 Message: 4165

Recently, one of the three main COMPUTERS in my Ham Shack started intermittently going BLACK and rebooting itself. That's one of those situations where you look around the room, shake your head, and wonder-- "Whut happened?" Am I not alone? Because I saw a video glitch once when it rebooted, maybe I was loosing a VIDEO card? I went in and replaced the AGP Video card with another one. It seemed to straighten out and worked for a day or so without a hitch. I thought I had it fixed, but when it started rebooting again, this time often, I knew I had a serious problem. Was it the motherboard? The CPU? A cooling fan? Is the power supply beginning to sag on a critical voltage? There are always multiple possibilities when you're dealing with an INTERMITTENT problem.

I went in with compressed air and cleaned the system out. Then I replaced the 450-watt POWER SUPPLY with another one, as a "probability" of cause. It worked! No more problems!

You can't normally do a lot of things to repair a faulty computer power supply, but I had to go inside it to satisfy my curiosity. Upon inspection, I found that one end of the (AC) power fuse holder was completely LOOSE! It wiggled freely, and the contact from the fuse-holder to the circuit-board was broken. Soldering the bottom contacts fixed the problem, and I was able to salvage a good dual-fan 450-watt supply.

4167. EMCOMM - Two Excellent Articles

Yahoo group: Temple_ARC
Date: 2008-06-06 19:08:57 UTC
From: Charlie Schlieper
Topic: 4167 Message: 4167

In the May, 2008, edition of Government Technology's "EMERGENCY MANAGEMENT," there are two excellent articles for those of you interested in the Emergency Communications aspect of Amateur Radio.

1. "Fusing with the EOC" by Blake Harris, as he points out the conventional wisdom that the first critical component of any EOC is the competency of the individuals who staff it, and the second critical requirement-- good communications. (Subtitled: Fusion Centers May Strengthen Emergency Management.)

2. "Who's in Charge?" by Eric Holdeman, where he emphatically states "Only willing partners coming to the table, treated as equals, will prove effective in establishing a national standard for incident response," and goes on to expand on NIMS and the ICS system, and its intricacies. (Subtitled: Regional Response Demands Joint Command and Control.)

Both of these articles have some very thought provoking and in-depth training for Amateurs involved with Emergency Communications and/or Emergency Management entities.

Reference: www.emergencymgmt.com Click on "Current Issue" or May, 2008. Should be the first two articles listed under "Feature Articles."

4170. Sound-Card Interfaces FOR SALE

Yahoo group: Temple_ARC
Date: 2008-06-11 22:23:02 UTC
From: Charlie Schlieper
Topic: 4170 Message: 4170

I have four 'surplus' (isolated type) sound-card interfaces for sale. $20.00 each. They all use dB-9 computer serial ports for PTT, and not USB. (USB-to-SERIAL port ADAPTERs could be used) They are all radio-ported to MINI 6-Pin DIN data connectors. (Adapters can easily modify these units to any specific RADIO data port, by using a Female Mini 6-Pin DIN on one end, to a 13-Pin DIN or 8-Pin DIN, or whatever connector you need on the other.)

These sound card interfaces are used when working Digital Modes with computers-- RTTY, PSK, PACTOR, SSTV, CW (keyboard), CHIP-64, MFSK, MT-63, OLIVIA, CONTESTIA, THROB, HELLSCHREIBER, RTTYM, PACKET, AMTOR, ASCII, etc

I do not want to bother shipping these units, but if you're in the Temple area, and interested, please contact me via e-mail.

4172. 20 Meter OWA stack

Yahoo group: Temple_ARC
Date: 2008-06-12 02:03:23 UTC
From: Terry - AB5K
Topic: 4172 Message: 4172

Got the 20 meter OWA stack on the tower this weekend. There are three antennas in the stack and each antenna is 6 elements on a 48 foot boom.

One of the antennas on the dual tram.

http://www.ab5k.net/Images/Antennas08/Tramming20OWA.JPG

Picture of the stack.

http://www.ab5k.net/Images/Antennas08/20OwaStack.JPG

Still some work to do before its operational cutting phasing lines and building a rotor.

Yahoo group: Temple_ARC
Date: 2008-06-13 19:33:17 UTC
From: Charlie Schlieper
Topic: 4176 Message: 4176

The Temple Amateur Radio Club's Fall HAM RADIO classes are planned to start on Monday evening, September 8, 2008. They will run for a shorter length of time than in the past, three weeks and one day. Days: Monday and Thursdays. Dates: September (8,11) (15,18) (22,25) and 29th. Location: Western Hills Church, 210 N. General Bruce Dr., in Temple. Times: 7PM to 9PM, but some classes may elect to start at 6:30PM, at the discretion of both the class and instructor. Tuition: FREE, but you are expected to pay for the cost of your Study Guides, which will be provided by TARC.

4178. Handy Frequencies for HF Digital Modes

Yahoo group: Temple_ARC
Date: 2008-06-14 03:27:28 UTC
From: Charlie Schlieper
Topic: 4178 Message: 4178

These are some handy "Suggested" frequencies for the following Digital Modes:

-----PSK31 Mode
1838.15kHz, 3580.15kHz, 7070.15kHz, 10137.15kHz & 10.140.15kHz, 14070.15kHz, 18100.15kHz, 21070.15kHz, 24925kHz, 28120.15kHz, 50.290MHz, 144.144MHz, 222.07MHz, and 432.200MHz.

-----PSK63 Mode
1838.15kHz, 3582.500kHz, 7072.500kHz, 10142.500kHz, 14072.500kHz, 18102.500kHz, 21072.500kHz, 24925kHz, 28122.500kHz, 50.290MHz, 144.144MHz, 222.070MHz, and 432.200MHz.

-----HELLSCHREIBER Modes
1804kHz, 3574kHz, 7064 & 7084kHz, 10.134MHz, 14.074MHz, 18.104MHz, 21.074MHz, 24.924MHz, and 28.074MHz

-----OLIVIA & MFSK Modes
1808.75kHz, 3583.25kHz, 7073.25kHz & 7076.75kHz, 10134.4kHz, 14076.4kHz, 18103.4kHz, 21087.25kHz, 24922.25kHz, 28076.75kHz, 50.29225MHz, & 144.13625MHz.

-----Generally used for Wide Bandwidth Digital Modes....
3620-3635kHz, 7100-7105kHz, 10.140-10.150MHz, 14.0950-14.0995 & 14.1005-14.112MHz, 18.105-18.110MHz, 21.090-21.100MHz, 24.925-24.930MHz, and 28.120-28.189MHz.

-----Popular Digital-Mode HF Band Segments, In General...
3580-3640kHz, 7060-7099kHz, 10.120-10.150MHz, 14.060-14.099MHz, 18.100-18.110MHz, 21.060-21.099MHz, 24.920-24.930MHz, and 28.070-28.130MHz.

The above frequencies are only "suggested," and NOT set in stone. You can work various digital modes in other places, as long as it is appropriate for that type of emission. :-)

4179. Kid's Day - Saturday June 21, 2008

Yahoo group: Temple_ARC
Date: 2008-06-20 17:20:12 UTC
From: Charlie Schlieper
Topic: 4179 Message: 4179

An ARRL sponsored event, KID'S DAY, takes place Saturday, June 21, 2008.
This is an event to encourage young people to have fun with Amateur Radio.
Times: 1800Z to 2400Z. Suggested exchange topics: NAME, AGE, QTH,
and simple things such as "favorite color," or "sporting activity", etc. You can
call "CQ Kids Day" on the following suggested frequencies: 28.350 - 28.400
MHz, 24.960 - 24.980 MHz, 21.360 to 21.400 MHz, 18.140 to 18.145 MHz,
14.270 to 14.300 MHz, 7270 to 7290 kHz, 3740 to 3940 kHz, and even your
favorite 2m/70cm FM or D-Star repeaters, with permission of the repeater's
sponsors.

More information can be found at: http://www.arrl.org/FandES/ead/kd-rules.html

4180. West Bell County DStar repeater: 440.675R + 5.0T

Yahoo group: Temple_ARC
Date: 2008-06-20 16:21:32 UTC
From: ke5c
Topic: 4180 Message: 4180

TARC member James Kennedy, WU5E, has installed a west Bell County DStar repeater on 440.675R + 5.0T on NU5D's Douglas Mountain facility:

http://www.findu.com/cgi-bin/find.cgi?w5lm-b

The coverage area is still being worked out, but it is very good. I've worked the machine from parts of Temple on 5 watts, and yesterday I worked it from Temple south on I35 to the 272 mile marker which is further south than K5CTX covers. The Ft. Hood Main Post should be well covered along with Killeen, Harker Heights and some of Copperas Cove. A co-located APRS no source routing javAPRSSrvr digipeater and IGate will follow, but D-PRS using your DStar radio is currently fully functional. Internet for the gateway is via Clearwire, and the dynamic IP feature seems to work well so far. Bandwidth appears sufficient although we may limit dvdongles to attaching one at a time. Tonite I dongled into this gateway after linking the gateway to reflector 1C and had no trouble chatting with several folks around the country. Please thank Jim by sending coverage reports and comments to:

james_kennedy83@...

and I would appreciate a copy as well. For testing, W5LM^^^B will be linked to K5CTX^^B as much as possible the next several days. If you are in the W5LM coverage area, please try it out. The link occasionally times out or is dropped by a user, so the K5CTX gateway computer has been programmed to drop any active link at 28 minutes of every hour and then (try to) link with W5LM^^^B one minute later. Thus any QSO's between 28-29 minutes of each hour may be interrupted during the minute this is happening.

For more DStar and dvdongle information:

http://en.wikipedia.org/wiki/D-STAR

http://www.dvdongle.com/DV_Dongle/Home.html

73 -- John

4182. Field Day and Homecoming

Yahoo group: Temple_ARC
Date: 2008-06-23 02:52:33 UTC
From: John Hobson
Topic: 4182 Message: 4182

CQ all TARC Club Members,

Please stop by the TARC Field Day site this next Saturday, 28 June, to visit and participate in Field Day with fellow Hams. We have planned a homecoming Bar-B-Q at 6PM for all TARC members. If you have not been to a meeting recently, please join us for a visit.

TARC Field Day

Date: Saturday June 28 and Sunday June 29, 2008

Times: Station set up will be 7 AM to 1PM Saturday

Field Day operation will be 1PM Saturday to 10 AM Sunday

Teardown will be 10 AM Sunday till done

Location: Texas Early Day Farm & Tractor Association Fairgrounds

Eberhardt Road across from Sprint Call Center

Temple, Texas 76504

Go to the ARRL Field Day Station Locator Web site for a map to the TARC Field Day site at the following Web site.

http://www.arrl.org/contests/announcements/fd/locator.php

Enter either W5LM or the city you live in and click on "Search for Field Day Stations"

Hope to all of you there!

73,

John, WD5BFS

TARC President 2008

4183. AO-51 Satellite is working well!

Yahoo group: Temple_ARC
Date: 2008-06-24 00:31:40 UTC
From: Charlie Schlieper
Topic: 4183 Message: 4183

Satellite Contact, the hard way.

I just worked K3IQA in Berwick, Northeastern PA, on AO-51 Satellite, but it was not without some discernment. Getting NO results for about half the pass, I discovered that I was using the wrong UPLINK frequencies (for the S-Band, which was turned OFF). A quick reprogramming of the satellite rig allowed me to contact Pennsylvania before AO-51 got completely out-of-range.

Moral of the story is--- it sure helps to be on the right frequency!

Charlie, N5TD

4184. GOTA Station Rules for 2008

Yahoo group: Temple_ARC
Date: 2008-06-24 17:26:42 UTC
From: Charlie Schlieper
Topic: 4184 Message: 4184

To remind some this year of how GOTA stations should be operate at Field Day, here are the 'ARRL 2008 Field Day Rules which concern GOTA.

4.1.1 Get-On-The-Air (GOTA) Station. Any Class A (or F) entry whose transmitter classification is two or more transmitters may also operate one additional station without changing its base entry category, known as the GET-ON-THE-AIR (GOTA) station. This GOTA station may operate on any Field Day band, HF or VHF, but is limited to one transmitted signal at any time.

4.1.1.1. This station MUST USE a different callsign from the primary Field Day station. The GOTA station must use the same callsign for the duration of the event, regardless if operators change. The GOTA station uses the same exchange as its parent.

4.1.1.2. The GOTA station may be operated by any person licensed since the previous year's Field Day, regardless of license class. It may also be operated by a generally inactive licensee. Non-licensed persons may participate under the direct supervision of an appropriate control operator. A list of operators and participants MUST be included on the required summary sheet to ARRL HQ.

4.1.2.1. A person who operated a GOTA station the previous year is ineligible to be a GOTA operator.

4.1.1.3. As per FCC rules, this station must have a valid control operator present if operating beyond the license privileges of the participant using the station.

4.1.1.4. The maximum transmitter output power for the GOTA station shall be 150 watts. If the primary Field Day group is claiming the QRP multiplier level of 5, the maximum transmitter output power of the GOTA station may not exceed 5 watts.

4.1.1.5. A maximum of 500 QSOs made by this station may be claimed for credit by its primary Field Day operation. In addition, bonus points may be earned by this station under rule 7.3.13.

4.1.1.6. The GOTA station may operate on any Field Day band. Only one transmitted signal is allowed from the GOTA station at any time.

4.1.1.7. The GOTA station does not affect the additional VHF/UHF station provided for under Field Day Rule 4.1.2. for Class A stations.

4.1.1.8. Participants are reminded that non-licensed participants working under the direction of a valid control operator may only communicate with other W/VE stations or with stations in countries with which the US has entered a third-party agreement.

4.1.1.9. The GOTA station does not qualify as an additional transmitter when determining the number of transmitters eligible for the 100-point emergency power bonus under Rule 7.3.1.

4185. Wednesday net/Field Day

Yahoo group: Temple_ARC
Date: 2008-06-25 03:29:57 UTC
From: John Hobson
Topic: 4185 Message: 4185

To: TARC Members

From: Leon K5ZZM k5zzm@...

On Wednesday, 25 June 2008 at 8:00pm, the TSAGRC net will be held on the 145.310 tone -123, following the simplex relay net which is on 147.550 at 7:30pm. Our training will consist of reports from the Central Texas Ham clubs as to what and where they will be operating from during Field Day this coming weekend. In addition, we would like a rep from each club to give a summary of:

1- The station call

2- What they will be operating as (1a,2a, etc.)

3- Where they will be operating from

4- Whether your group will be testing

5- Any comments you would like to make regarding your event.

This net will be operating on the 145.31 so the range will be greatly enhanced. We would sure appreciate any input during our net and welcome all of you to participate.

73s

Leon

From: k5doa@vvm.com
Topic: 4188 Message: 4189

Yes there will be a 4th of July parade, and we need a good turn out as several of our key regulars have other committments this year.

I have been attending the planning meetings and everything seems on track. Jason promises to have better maps this year that will show the approximate location of the numbers along the line up streets. Otherwise, things are pretty much the same as last year.

We will use the Belton repeater as usual. I'll send the info in another post after I dig up the frequency.

We will meet in our usual spot in the parking lot near the UMHB college entrance. I'll send the exact coordinates with the repeater info. We need to be there shortly before 8 AM. The parade rolls at 10 AM so our involvement will be over around 11 AM.

This is probably the best opportunity during the year to use our hand helds and show what we can do with ham radio communications.

4193. Forth of July Parade

Yahoo group: Temple_ARC
Date: 2008-06-02 16:41:09 UTC
From: k5doa@vvm.com
Topic: 4193 Message: 4193

Our participation in the line up process for the Belton July 4th parade is coming up Friday morning.

We will plan on meeting at the parking lot at the corner of 9th and Pearl at 7:45 on Friday morning. Enter Mary Hardin Baylor through the main gate on 10th from 317 and turn left on Pearl at the next intersection. Then turn right on 9th and enter the lot. If you should be late, and the city has already closed 317 through town, it will be necessary to enter the campus from the west side off loop 121. However, they have indicated that will be delaying the closing this year so that should not be a problem.

Jason Morgan will be our coordinator again this year - same as last. So we will have the usual set of printouts showing where things go. He has promised to improve the maps by showing the approximate location of the line up numbers on the map. I have not heard of any new wrinkles in the parade this year. Line up will be along the same two paths as last year.

We will plan on using the N5DJJ Belton repeater as usual. The frequency is 147.3/147.9 with a 88.5 tone. It has worked great for us in the past. Hand helds is the order of the day, as all the activity will be on foot or in carts.

There should be plenty of water available.

Tee shirts will be not be provided this year. They will provide one of those bright yellow vests instead. However, I would hope that most of us can just wear our TARC shirts to show off the club. Otherwise, the vest will work fine.

Be sure to bring some strong sun block and a big hat.

Thanks to all who have indicated they can help. We can always use more help, especially this year because we have several of our regulars out. This is a good event that exercises our communications capabilities. If you are a new ham, this is a good event to get involved with. Even if you have not purchased a radio yet, we can pair you up with a buddy on the line up team.

If you have not indicated to me that you can help, please drop me a note at k5doa@.... Or if you don't know until the last minute, just show up on Friday.

The parade starts from 10th and 317 at 10 o'clock. If past experience is a clue, we should be done between 11 and 11:30.

Thanks for helping out. CU there. 73 - Darwin K5DOA

From: April Billups
Topic: 4199 Message: 4199

Hello!
Great parade today! Thank you for being so patient with us and including us in the fun. It turned out to be easier than we thought. We all had a blast (minus the Coggins issue.....)

What is the best way for us to order our club name tags?

April (for the Billups)

Well thanks to all the Billups and everyone else who made it out. We had a fun time as usual and the parade went very smoothly thanks to your efforts. We had several of our old hands out and the newcomers stepped up to the task and did a great job.

I am making a list of all the new members we have gotten in the past couple of months and will send it to Oscar Houser - who will order the tags. Also, please let me know if you have changed calls because of an upgrade and not yet received your new badge . I already have Ken Baker on that list.

Have a nice holiday. 73 - Darwin K5DOA

4201. Milam County Repeater on the air.

Yahoo group: Temple_ARC
Date: 2008-07-05 20:06:46 UTC
From: N5ZXJ aka TowerMonkey
Topic: 4201 Message: 4201

The Milam County ARES repeater went operational today at 1030 hours.
This is the first amateur repeater built in Milam County for county
wide Amatuer radio emergency service and general use.

Frequency 147.020+ Tone 123

The repeater is installed at approximately 150 ft. on the tower
which is County owned and used by the Sheriff Dept, DPS, a Wireless
Provider, and a couple other users.

Many thanks to the following:

County Judge Frank Summers KE5OCJ Milam County
County EMC Susan Reinders KE5LVI Milam County
Gerald Richmond N5ZXJ Bell County
James Cleveland N5ONI Bell County
Kevin Epperson K5KEV Bell County
Joe Dorn W5VEX Bell County
Gary Chamberlain KB5DLK Milam County
Russell Mezynski KF5LNX McLennan County

And the many others that have helped make this happen for Milam
County.

We would appreicate any Signal reports and comments.

This repeater will be monitored as close to 24/7 as possible.

Sent: Friday, June 13, 2008 10:27 PM
Subject: [TARC] Handy Frequencies for HF Digital Modes

These are some handy "Suggested" frequencies for the following Digital Modes:

-----PSK31 Mode
1838.15kHz, 3580.15kHz, 7070.15kHz, 10137.15kHz & 10.140.15kHz, 14070.15kHz, 18100.15kHz, 21070.15kHz, 24925kHz, 28120.15kHz, 50.290MHz, 144.144MHz, 222.07MHz, and 432.200MHz.

-----PSK63 Mode
1838.15kHz, 3582.500kHz, 7072.500kHz, 10142.500kHz, 14072.500kHz, 18102.500kHz, 21072.500kHz, 24925kHz, 28122.500kHz, 50.290MHz, 144.144MHz, 222.070MHz, and 432.200MHz.

-----HELLSCHREIBER Modes
1804kHz, 3574kHz, 7064 & 7084kHz, 10.134MHz, 14.074MHz, 18.104MHz, 21.074MHz, 24.924MHz, and 28.074MHz

-----OLIVIA & MFSK Modes
1808.75kHz, 3583.25kHz, 7073.25kHz & 7076.75kHz, 10134.4kHz, 14076.4kHz, 18103.4kHz, 21087.25kHz, 24922.25kHz, 28076.75kHz, 50.29225MHz, & 144.13625MHz.

-----Generally used for Wide Bandwidth Digital Modes....
3620-3635kHz, 7100-7105kHz, 10.140-10.150MHz, 14.0950-14.0995 & 14.1005-14.112MHz, 18.105-18.110MHz, 21.090-21.100MHz, 24.925-24.930MHz, and 28.120-28.189MHz.

-----Popular Digital-Mode HF Band Segments, In General...
3580-3640kHz, 7060-7099kHz, 10.120-10.150MHz, 14.060-14.099MHz, 18.100-18.110MHz, 21.060-21.099MHz, 24.920-24.930MHz, and 28.070-28.130MHz.

The above frequencies are only "suggested," and NOT set in stone. You can work various digital modes in other places, as long as it is appropriate for that type of emission. :-)

4206. Simplex Frequency 146.520

Yahoo group: Temple_ARC
Date: 2008-07-08 16:16:19 UTC
From: Mike Hankins
Topic: 4178 Message: 4206

Just a note for some new members, that you can program the frequency
146.520 with no tone needed and no repeater shift (no duplex),
to use when reception to the repeater may be limited, such as from
inside metal buildings or a Walmart when you want to talk to another
handy talky at the same location or from the store to the parking lot.

Perhaps we can make a list of local repeater and simplex frequencies
available (printed out) at club meetings.

Also, FYI, simplex at times isn't limited to close reception. I have held conversations with KE5FEN (David) for several miles. The most distance we gotten is the nolenville to copperas cove.

Subject: [TARC] Simplex Frequency 146.520

Just a note for some new members, that you can program the frequency

146.520 with no tone needed and no repeater shift (no duplex),

to use when reception to the repeater may be limited, such as from

inside metal buildings or a Walmart when you want to talk to another

handy talky at the same location or from the store to the parking lot.

Perhaps we can make a list of local repeater and simplex frequencies

available (printed out) at club meetings.

From: john_ke5c
Topic: 4211 Message: 4211

On most Thursdays I drive down to Round Rock. I start listening to 20 meters, then usually quickly switch to 40 meters finding 20 meters dead. Today, however, on 20 I heard W1AW's code practice, the county hunters net, and I chatted with LZ7HHA (Bulgaria) and K1NVY (relocated to near Seattle) without difficulty. KI5M mentioned within the past week that 10 meters has been open some too.

Hi Mike

Sure, will get together with you if you need to. Do you need
the whole MixW program too, besides the Beta update I gave you the
other day? I'll bring it over on a Flash Drive if you have USB port
accessible. Let me know when. I just finished helping Al Howe install
his IC-208 and dual-band mobile antenna on his truck. I'm about to
take a shower before I do anything else. It was VERY hot outside
for about 4 hours, and we both were soaking wet when we finished.
So if you want me to come over today, give me a call on the phone.

Mike,

I forgot to ask, do you have your MixW "REGISTRATION" yet?
If so I can completely set it up for you in one trip. Even if you only have
your CALLSIGN at first, I'm sure they will allow you to add your wife's
call later.

4218. Sound-Card Sample Rate Calibration

Yahoo group: Temple_ARC
Date: 2008-07-14 00:45:39 UTC
From: Charlie Schlieper
Topic: 4218 Message: 4218

It is very important to understand that it can make a world of difference to calibrate your computer sound-card, if you're going to use it for ham radio digital modes. While a few programs such as PSK, will work with sample-rate errors, any "TX Off-Sets" will still walk you up or down the band, and be very annoying to others. The more sophisticated digital modes which depend on many generated and decoded tones, are much more critical.

Dave, KB3FXI recently wrote:

>>> I know from experience that the calibration is critical for MT63 with many sound cards. In extensive testing with MixW and MT63, I found that MT63 is amazingly accurate, even under relatively poor conditions, but the TX and RX calibration needs to be within 1% accuracy... once you go beyond +/- 2% the result is capitalization and character errors. Beyond +/- 2% the print is completely unreadable.

I have also found Dave's comments to be true, and computers with calibrated sound-card sample rates do perform much better in decoding many modes, such as Olivia, Contestia, MT63, MFSK, and especially SSTV.

Praat is probably the best program that I know of for such calibration. It will also let you calibrate frequency and formant which become important with narrow modes such as psk31.

4221. The National Dam Safety Program

Yahoo group: Temple_ARC
Date: 2008-07-16 03:00:18 UTC
From: Charlie Schlieper
Topic: 4221 Message: 4221

Or, a little bit of humor.....

I've taken and completed 65 FEMA training courses in Emergency Management topics. A few days ago I ordered some training DVDs on "Advanced Firefighting Operations and Tactics, Research and Technology." A little off course for EMCOMM, but I thought it would give me some additional insights.

Today, I received a package from FEMA. To my surprise, it was two DVDs entitled: "The National Dam Safety Program." Training Aids for Dam Safety (TADS): A Self-Instructional Study Course in Dam Safety Practices... (I wonder what kind of trouble I could raise with this topic on our local repeaters?)

I think someone at FEMA made a little mistake?

4222. Proposed 2m Band Plan Change

Yahoo group: Temple_ARC
Date: 2008-07-16 20:53:14 UTC
From: Charlie Schlieper
Topic: 4222 Message: 4222

This is a bit early to mention this, but if the proposed change to our 2m Band Plan is approved, you might want to think about changing a couple of 2m SIMPLEX frequencies in your FM radios. I can think of two that I have---> 146.46 and 146.49 SIMPLEX. Of course, they will NOT be illegal to use, FCC wise, but will be out of the "bandplan" in Texas, whereas "NO ANALOG TRANSMISSION" is recommended from 146.450 to 146.490 MHz. (Ref: Info from Texas VHF-FM Society NEWS, Summer 2008, Vol. 42, No. 1.) For additional information, see www.txvhffm.com .

4223. My RJ-45 Cable Dilemma

Yahoo group: Temple_ARC
Date: 2008-07-19 02:59:34 UTC
From: Charlie Schlieper
Topic: 4223 Message: 4223

In an effort to limit the amount of "Wireless RF" in my shack, I chose to run a wire-line (CAT5) 100-baseT router from my 2.4GHz wireless broadband internet to all of our computers. The router feeds three computers in my ham shack, one of them uses a four-port RJ-45 data switch to allow my laptops to conveniently be updated. (I know, wireless would do this nicely!) The fourth line goes runs about 40-feet into the wife's computer workstation, where it feeds a second RJ-45 Data Switch.

Up until now, all of the network cables had worked flawlessly without any problems. But when the wife decided to extend her network to two other systems-- her laptop and a secondary backup computer, neither of them worked. Her computer had always worked, and fast without any problems, but the other two would not. The RJ-45 data switch box and extension CAT5 cables were suspected, but all checked good.

The answer here was not easy, but persistent troubleshooting finally paid off. Her original CAT-5 Cable, which I had made up in my early days of doing LAN cables, and which had always worked fine on her main computer-- was actually at fault. It had TWO wires inside which were CROSSED on each end, but crossed in such a way as to allow the CAT-5 cable tester to show the cable as being GOOD. The GREEN/WHITE and BLUE/WHITE wires were crossed in each RJ-45 connector. Experience had taught me that this was critical anytime longer network lengths are used, so I cut each RJ-45 connector OFF and rewired them according to 568B specs. Then everything worked great, and expanding her network to the two additional computers was perfect.

So even though the PIN-to-PIN integrity of the network cable was good, just those two wires in the wrong positions were the problem at the faster speed and length required.

Holding an RJ-45 connector with the pins toward your right and facing you, from top down, the wires for a Straight-Through Data Cable should be: ORANGE/WHITE, ORANGE, GREEN/WHITE, BLUE, BLUE/WHITE, GREEN, BROWN/WHITE, BROWN.

For an RJ-45 Cross-Over Cable, 568A wiring is used on ONE end. 568A switches the GREEN and ORANGE wires from a standard cable, and also the GREEN/WHITE and ORANGE/WHITE wires. Think of the "Cross-Over Cable" as a NULL-MODEM cable. They allow you to directly connect two computers up to each other, using Ethernet (CAT5 cables and RJ-45s) connections.

RJ-45 Connectors are also used for many RADIO MIC connectors, so it might be advisable to obtain a good RJ-45 crimp tool if you don't already have one. Always inspect the wires when they first enter into the RJ-45 slotted channels, to insure crossovers haven't occurred. With a little practice, you will easily become proficient in using RJ-45s in all Ham Radio/Computer applications.

73,
Charlie, N5TD

--- In dstar_digital@yahoogroups.com, "RADIO MAN" <BRYAN.STACEY@...>
wrote:

NBC's "Dateline" to explore the perilous world of tower dogs on July
21

July 16, 2008 - NBC's "Dateline Presents" says it will take "a
never-before-seen journey into the hazardous world of the tower
climbers who
work on the frontlines of America's high-tech communications system."
The
program, "Tower Dogs," will air on Monday, July 21 at 10:00 PM/ET.

The hour-long broadcast is expected to give an up close and personal
no-holds-barred look at tower dogs' lives - up in the air and on the
ground. "We experience their on-the-job tension and watch them work
hard, play hard, and mourn when they lose one of their own," NBC said
in a press release. In a twist on all the dangerous-job programs that
solely feature males, typically narrated with muscular prose, "Tower
Dogs" follows an unusual tower crew boss: a woman named Nikki Collins,
a single mom, former cheerleader, and the person keeping her tough-guy
charges in one piece. Although there has been a noted increase in
tower
construction company owners and climbers that are women they are in a
small minority in a predominately male profession.

The "Dateline" team worked for four months documenting this group of
tower climbers as they worked their way through 40 towns and cities
in
24 states. During this time there were seven fatalities nationwide,
including five deaths in a 12-day period in April. National exposure
long
overdue, say many.

4227. FW: Request for Amateur Radio Operators in support of possible coastal evacuation

Yahoo group: Temple_ARC
Date: 2008-07-22 01:24:17 UTC
From: John Hobson
Topic: 4227 Message: 4227

CQ Volunteers,

Well, hurricane season is here and it looks like Texas is in the path of one of the first storms of the year.

Texas has developed a well planned coastal evacuation plan that has residences relocating to counties inland. Bell County is one of the counties designated to receive evacuees. Texas has already started preparations in case hurricane Dolly requires an evacuation. Bell County is also in the early stages of preparation. The county ARES and CTARC help support this effort with communications.

In preparation, Gary Dewrell has started organizing the Ham community asking for Hams that would be willing to provide communications from one of two locations if costal evacuations are necessary. Please let Gary know if you are able to assist by Emailing him at gary@... with your name, call sign, hours available for duty and preferred duty location. Please see Gary's Email below for additional information.

Please consider volunteering to help if you can.

John WD5BFS

To: John Hobson
Subject: Request for Amateur Radio Operators in support of possible coastal evacuation
Importance: High

John I have been asked to provide ham radio operators in support of a possible evacuation of parts of the coast due to a potential hurricane landfall.

If called we will be manning two locations.

One will be a Fuel Depot and we will be providing the equipment for this location so operators need not bring anything.

The seconds location is yet to be determined but will most likely be as a mobile lookout somewhere on I35 South of Bell County to let us know when Buses are entering the county.
This position will require someone who is mobile and has a 2meter radio.

The number of shifts and shift duration will be determined based on the number of volunteers we get.

If you have any people that would like to participate in this operation I need the following information from them. They can email me at kd5abq@...

Name
Call sign
Hours Available for Duty
Preferred Duty: (Fuel Depot or Mobile Lookout)

Operations are expected to start on or around Wednesday July 23rd.

From: FRANK W. JENKINS
Topic: 4233 Message: 4234

HI MIKE,

Hope I find you well. I wanted to contact you and say hi and let you know that I have Moved again. Karen My wife got a great Job offer in Denver area so we moved here and are doing well. Unfortunately we live in a condo for the moment and cannot work hf radio but will correct that later and lease a house.
Pass along my address and phone number if any one would like it, it is as follows:

Frank and Karen Jenkins
7440 S. Blackhawk st. , Englewood, Co. 80112
ph# 303-627-2725

Again Hope your feeling well say hello to all there.... 73's Frank Jenkins N5MDV

4235. Limited DX is still Out There...

Yahoo group: Temple_ARC
Date: 2008-08-01 18:03:21 UTC
From: Charlie Schlieper
Topic: 4235 Message: 4235

Yes, we're still at SOLAR MINIMUM, regardless of a few astounding headlines that went something like-- "Cycle 24 Begins!!!" A quick check of spaceweather.com clearly shows NO Sunspots, day after day. Ref:
http://science.nasa.gov/headlines/y2008/11jul_solarcycleupdate.htm

While it may seem unusual, most authoritarians assert that the Sun is acting perfectly NORMAL during this period of solar minimum. We're just not out of it yet.

DX is still out there, but it may be a challenge. I've recently worked the Netherlands Antilles, Island of Crete in Greece, Argentina, Spain, and a few others, but the signals were (at times) weak and variable. You know, when you can pick a CALLSIGN out of mostly NOISE, that you're getting good at working weak signal DX.

Enjoy Ham Radio!

4236. recommendations on a good electric generator for HAM use?

Yahoo group: Temple_ARC
Date: 2008-08-01 20:46:07 UTC
From: abillupsgo
Topic: 4236 Message: 4236

Hi Guys,

I am looking for recommendations on a good gasoline powered electric generator. I understand some run of the mill generators can interfere with electronics or can have poor voltage and noise AC. The Honda looks good except the price. Do you recommend generator with inverter technology or conditioning the power outside of a normal generator?

Thanks!
James

4549. Very Confusing! Ham Expo Price...

Yahoo group: Temple_ARC
Date: 2009-02-20 01:10:49 UTC
From: Charlie Schlieper
Topic: 4549 Message: 4549

Several places on the TARC website, there are CONFLICTING amounts for the ADMISSION at Ham Expo on April 18, 2009. This is very confusing.

The SCROLL opens with "ADMISSION $3.00" and later runs two separate "ADMISSION $5.00" listings.
Also - down further below on the webpage, the ADMISSION clearly (again) shows to be *New - $3.00 Admission.

These conflicts need to be corrected soon.

Thanks,

Charlie, N5TD

Thanks to Mike LeFan for correcting the conflicts on Belton Ham Expo "Admission Price" so quickly. I appreciate it! Glad to know also that the Ham Expo admission is going to be just $3.00-- instead of $5.00. With these bad economic times I was hoping it would remain fairly low, to help promote the interest of Ham Radio first. I am also aware that the rental fee for the facility has also gone up recently. Good work Mike.

tnx,

Charlie, N5TD

Whoever arrl.ntx might be, not from around these parts apparently, I just want to say that I don't like the tone of your header. Mr. Blackwell has served ARRL NTX well in a volunteer capacity and managed to head down to HamExpo and Club meetings in Temple when he was able. I think the extreme partisanship that you seem to display is rather silly for a hobby like Amateur Radio. I would rather you keep your negative comments to your self. I don't think they have a place on this reflector.

If "arrl.ntx" is really Mr. Jay Urish in disguise, then Mr. Urish, I think we are getting off to a rather bad start. I like most hams appreciate folks who are able to step forward to volunteer their time to serve the hobby. IMHO remarks such as those are out of order on the TARC Reflector. Let's keep any political posts positive and civil (if we have them at all)

Hello,

Been trying to stay out of this since I am not really a member of your club. I joined this group to keep up with the Belton meets each year but I must say the following.

I know Jay from the Texas VHF FM Society and his election probably will not be a "good" thing. As in the Society fights he helped lead he used mis-quotes and innuendo to help win the election.

One of the things he complained about in his campaign letter was Tom's lack of visitation of Ham club's. Well Tom drove from his house in Dallas I think to Fort Worth to meet with our small 20 member club! He seemed to be very honest and knowledgeable regarding Ham radio.

Sorry if this offends but his group has hit some pretty good people with slander, including myself.

4564. Ten Meter Repeater OffSet

Yahoo group: Temple_ARC
Date: 2009-02-28 04:25:40 UTC
From: Charlie Schlieper
Topic: 4564 Message: 4564

I noticed a small error in the March, 2009 TARC Bulletin, in the article entitled "TEN METER FUN YOU CAN TRY." It mentions a "500-kHz offset" is used for 10Meter FM repeaters. This is incorrect. The example which follows that is correct however, but it turns out to be a "100-kHz offset" rather than 500kHz.

Preliminary Announcement...on plans for the Spring, 2009, Ham Radio Classes:

(The Spring SKYWARN class is set for Saturday, March 21, 2009.)

The TARC Ham Radio Classes are planned to start right after, on Tuesday, March 24, 2009, meeting on Tuesdays and Fridays for three weeks and one day, ending on Tuesday, April 14, 2009. The times are 7PM to 9PM, at the Western Hills Church of Christ, 210 North General Bruce Drive, in Temple.

(The Spring BELTON EXPO is set for Saturday, April 18, 2009, which directly follows the classes.)

4570. Lampasas Repeater Update

Yahoo group: Temple_ARC
Date: 2009-03-02 22:03:08 UTC
From: Pete Theer
Topic: 4570 Message: 4570

Hi Guys and Gals,

Just to let you all know that the preamplifier was installed in the Lampasas repeater this afternoon about 3:15 (Adjusted for maximum signal by ear for the timer being). The results sound awesome. Mark, KE5MZP, can access the repeater from his home in Copperas Cove with FIVE watts - Full Quieting. He can even access the repeater with a HT w/rubber duck inside the house, albiet a bit noisy but copyable. (Lightning had taken the last preamp out some time ago)

We still have some antenna work to do, but it's getting much better.

Give it a try if you get a chance & please spread the word around the area.

147.220 PL Tone 88.5 Hz.

Best 73,
Pete, K5PRT, Kempner TX

4572. Thermal Pads vs HeatSink Compound

Yahoo group: Temple_ARC
Date: 2009-03-05 01:09:13 UTC
From: Charlie Schlieper
Topic: 4572 Message: 4572

These NOTES might be of help to others when replacing computer CPUs with their associated HEATSINKS.

In the process of upgrades to faster CPU replacements, I ran out of "THERMAL PADS" that go between the core of the CPU and the HEATSINK, and began using a thin layer of "High Efficiency Heat Sink Compound" in it's place. It's taken a while, but here's what I've learned.

The non-contaminating synthetic ester based compound works well for a short period of time, but tends to require reapplying periodically on all vertically mounted Motherboards. I attribute this to "GRAVITATIONAL MIGRATION." My wife has a simpler way of describing it--the "OOZE." Other factors such as heat cycling will eventually dry heat compounds out. I have noticed that desktop systems with the CPU mounted horizontally, will seldom give any trouble; however, most modern computer systems seem to be vertical towers.

Thermal Pads are available for around 50 to 70 cents (or less in quantity). I have not done a complete study of the two types of mounting, but I suspect that thermal pads work better on vertically mounted CPUs.

My only conclusion is, if you use any type of zinc-oxide heatsink compound in replacing or mounting CPUs to vertical boards, you might periodically go into CMOS and check the running CPU temperature from time-to-time. Usually, it's called "PC HEALTH STATUS." I have effectively reduced systems running well over 60-degrees Celsius, down to mid 40's after periodic PC maintenance.

Blow and clean the heatsink fins out occasionally too. You'd be surprised what can collect in a short time, even in a relatively clean home.

4574. Help Wanted

Yahoo group: Temple_ARC
Date: 2009-03-07 15:11:57 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 4574 Message: 4574

With James Kennedy resignation to accept work out of state the TARC is actively soliciting nominations for the office of Vice President. This was not published in the March bulletin,

See http://www.tarc.org and click bylaws for qualifications of officers.

In brief:

2.10 Non-payment of annual dues by the renewal date shall result in termination of membership. Members who are delinquent in dues may not vote or hold office. Those who are delinquent more than 30 days will have their membership revoked. Membership will be reinstated upon payment of the current full-year dues.

5.01 Qualification for Office

1. The President and Vice-President shall have been the holder of a valid Amateur Radio License for at least two (2) years, and a Full Member of the Club for at least one (1) year immediately preceding nomination for office.
2. A member of the Board of Directors shall have been the holder of a valid Amateur Radio License for at least two (2) years, and a Full Member of the Club for at least one (1) year immediately preceding nomination for office.
3. All elected officers and directors shall be licensed Amateur Radio Operators and shall be Full or Family members of TARC.

Vice President

5.19 If the President is absent or unable to act, the Vice-President will perform the duties of President, and when so acting, will have the powers of and be subject to the restrictions of President. The Vice-president will perform other duties as assigned by the President or the Board of Directors. If the office of President becomes vacant, the Vice-President will assume that office and its duties.

4577. Short DSTAR Info Bit from K7VE

Yahoo group: Temple_ARC
Date: 2009-03-08 22:57:04 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 4577 Message: 4577

This was posted on the dstar_digital yahoo group today, and cross posted with John Hays, K7VE permission:

Hi Artie,

There is a fundamental difference between D-STAR and the VOIP systems like Echolink, IRLP, WIRES, AllStar/Tiara, ...

On those other systems, the approach is to take analog audio from a receiver, and with a computer/soundcard, convert that audio into a digital format for transmission across the Internet, where it is immediately switched back to analog audio for a transmitter. The radios and repeaters involved are the same analog FM that has been around since the early amateur radio repeaters in the middle of the last century. This is what people are familiar with and they approach the connectivity issues from that frame of reference. Nothing wrong with that, it is the way we humans approach problems, building on prior experience.

D-STAR is a paradigm shift for the amateur community. It isn't about merely moving voice (audio) from one location to another. It is, in every sense a digital mode.

A D-STAR transmitter (for Digital Voice or DV), translates, compresses, and encodes the "audio" into a digital stream using AMBE, at 2400 bits per second, *within the radio*. That digital stream is also given some forward error correction (FEC) consuming another 1200 bits per second. This FEC is a factor that allows D-STAR transmissions to recover the original audio content and deliver clarity when the signal is very weak (on analog FM it would have a great deal of noise - here is a video comparing the two in real time http://www.youtube.com/watch?v=FyYhLtS-0gE - not english, but clearly shows the difference). The actual transmitted signal is encoded at 4800 bits per second, so removing the 3600 bps for the audio, there is another 1200 bps that can be used for various ancillary communications, including position reporting (GPS coordinates), short message service, and various contextual pieces of data. This additional data has been exploited for some fairly sophisticated applications, such as D-STAR TV (sending images), D-RATS (chat, message passing including email gateway to the Internet, TCP/IP tunneling, ...), etc. This combination of digitally encoded audio and ancillary data is always in the data stream in a D-STAR (DV) signal, whether the audio is silent or not -- it is there, whether the "data" portion contains all zeros or one or more of the listed data items -- it is there - they are inseparable. This data stream is modulated onto a narrow (6.25kHz.) FM signal using GMSK modulation.

A D-STAR receiver, on the other hand, receives the narrow FM signal, and using GMSK demodulation, extracts the data stream, and processes it through the AMBE chip to deliver the audio and the ancillary data mentioned above. If you were to listen with a traditional FM receiver you would hear what I call "structured noise." You can tell it is not natural, it has patterns in the noise.

A D-STAR repeater doesn't convert this datastream to audio and ancillary data, though it does examine the data stream to know what to do with the payload (Callsigns, control bits, and so forth). In fact, you cannot tap audio out of the D-STAR repeater directly. In the Icom repeaters, I've been told the audio sections of the radios have not been populated. The repeater directs this digital stream from the receiver to the transmitter, in digital form, and optionally send the digital stream via the controller to co-located repeaters (based on callsign routing) or to a gateway computer. Again, the gateway computer keeps everything at the digital level, and based on information from the datastream optionally directs the datastream to remote gateways, which, in turn, pass that digital signal to a controller, which sends its to the appropriate repeater module, and on to the user radio, where the audio and ancillary data are ultimately decoded.

The gateway computer is connected to the controller using Ethernet, and by specification must be "close" to the controller (from a latency point of view). In most installations the gateway computer is co-located with the controller and repeater decks and the Internet is brought to the computer at the repeater site. (The Greeks report having separated the computer from the controller by some distance using low latency WiFi style connections, but this is not typical.) The Internet connection must be stable, low latency, low jitter (inter-packet timing should be stable, it doesn't work well through satellite connections, because those circuits will buffer and burst packets creating high jitter), and have an IP address for the computer that changes infrequently. It also requires a router with certain characteristics (LAN side Class-A address space).

The gateway has many functions to perform including keeping a database of all known callsigns on the D-STAR network and what gateways have most recently heard them. This is why on D-STAR you can tell your radio you want to speak to a specific station (callsign) without knowing what repeater (worldwide) the station is monitoring, the gateway system will figure it out and send your signal (datastream) to the right repeater and ultimately to your desired receiving station. In order to keep all of this data up to date, the gateway needs sufficient bandwidth to send and receive the datastreams for each of the attached repeaters to the various destinations, including a potential 128 kbps, usually TCP/IP, stream (from 23cm DD mode - Ethernet over the ether), as well as the command and control, data synchronization, etc.

So, as you can see, this system is much more complex, and powerful, than the VOIP pack (IRLP, Echolink, etc.) that are only concerned with routing audio from one repeater to another over the Internet. In

D-STAR, there is simultaneous audio and data, that must traverse the whole network.

For these reasons, you will not be able to provide the services that D-STAR users want and expect without a decent, reliable, and moderately high bandwidth Internet connection. In D-STAR, you need to understand and provision a network, not just a radio link.

Welcome to D-STAR!

4580. 2009 Skywarn Training

Yahoo group: Temple_ARC
Date: 2009-03-15 15:07:30 UTC
From: k6wxa
Topic: 4580 Message: 4580

Just a reminder, Skywarn training for 2009 is quickly approaching for this coming Saturday, March 21st, at Central Texas College in Killeen.
The following info is a re-print from the Killeen Daily Herald:

Saturday seminar to focus on severe weather
Posted On: Sunday, Mar. 15 2009 06:04 AM
Special to the Daily Herald

The annual Bell County Severe Weather seminar is scheduled for Saturday in Killeen at the Central Texas College's Nursing Auditorium.

The Bell County severe weather program is one of more than 40 that the Fort Worth National Weather Service office will conduct between January and April. However, this is one of only a few "in-depth" seminars that will be presented. The 2008 storm season in north and north-central Texas was one of the more violent in recent history, and the 2009 severe weather season is at hand.

Registration starts at 8 a.m. The basic session will run from 9 a.m. to noon. The advanced session is from 1:15 to 4 p.m.

The program will kick off with a review of severe weather safety tips and severe weather operations at the National Weather Service. This presentation will emphasize thunderstorm formation, severe weather production and visual clues associated with severe storms.

The afternoon presentations will feature a special presentations and advanced training. Reed Timmer from the University of Oklahoma and the Discovery Channel series "Storm Chasers" will discuss storm observations and spotter operations.

Joe Dorn from Bell County Amateur Radio Emergency Services will discuss spotter operations within the county.

Gary Woodall will conclude the afternoon session with a presentation on advanced storm concepts.

The advanced spotter session will focus on severe storm environments, theories of severe weather production and tornado formation, and storm evolutions, analysis of severe weather patterns and a case study from a recent severe weather event.

In addition to the formal presentations, the seminar will feature exhibits and displays from agencies across the county.

The seminar is free, and members of the public are welcome to attend.

Members of the Palos Verdes Amateur Radio Club (K6PV) will be activating Santa Catalina Island in the NA-066 Islands On The Air group, during the period April 1st through April 5th. Operations will be conducted from the settlement of Two Harbors, on the northeastern portion of the island.

While no specific frequency(ies) will be used, principal operations will be on the 20 and 40 Meter fone bands. Persons requesting a QSL for contacts with the group, should QSL direct to K6PV.

For more information on the Palos Verdes Amateur Radio Club, please visit: www.palosverdes.com/pvarc

4587. Extra Class Cancelled

Yahoo group: Temple_ARC
Date: 2009-03-23 16:53:24 UTC
From: k5doa@vvm.com
Topic: 4587 Message: 4587

I regret that I will be unable to teach the extra class this time around. My Mom has injured one of her legs and is requiring some extra help on our part for the next couple of weeks while it heals. She will be fine, it will just take some time and her taking it easy a few weeks.

I think I only had one student. He has had the class before, so should be able to get back up on the curve with a little study before the test.

Brooks - the next step up is the general class. The instructor for the general class is Mike kI5M. His email is: Michael Hankins <Michael.Hankins@...>

There was supposed to be a general study class starting tonight but I do not know if it made up or not. I suggest you contact Mike at the address above. Whether or not the class makes up, I believe Mike has some general class study guides available at the club discount price. If not, I have a couple available. 73 - Darwin k5doa

4595. Bulletins / Program / IC91AD How To Session

Yahoo group: Temple_ARC
Date: 2009-03-30 16:16:54 UTC
From: Steve Bosshard
Topic: 4595 Message: 4595

The club bulletins were labeled and mailed this morning. John added a nice "RENEW" notice as applicable on the labels.

Nominations for Club VP are still needed. The Bylaws at http://www.tarc.org sections 2.04, 2.10 and 5.01 outline the requirements for nomination.

Last month's program, a video from KN4AQ on HF Digital Voice was set aside for a visit by our section manager and update. I will offer this video again Thursday night and bring some soft drinks, chips and cookies for snacks. Visitors Welcome !

There will also be a sign up sheet for Ham Expo work details.

There will be an IC-91AD thorough operating instructions presentation Saturday Morning April 4 at the Moffatt VFD Station in Moffatt at 9:30 AM - anyone wanting to know more about your 91AD, bring your radio and join in the fun. Contact Hal N5JLL hpagel@... or Dale W5DUK w5duk@... for more information.

4599. TARC Meeting Program

Yahoo group: Temple_ARC
Date: 2009-04-03 02:55:54 UTC
From: John Hobson
Topic: 4599 Message: 4599

Steve,

I would like to thank you for all of us at the TARC meeting tonight for the great program on HF digital voice modes. I have read articles on HF digital voice modes but being able to see and hear demonstrations of the various modes was very educational. I might try and load one of the PC programs and try and listen to a net in the near future.

Again, thanks for the program tonight. I am sure all present enjoyed it.

John WD5BFS

4600. 2009 National Hurricane Conference Has Amateur Radio Focus

Yahoo group: Temple_ARC
Date: 2009-04-03 20:46:38 UTC
From: john_ke5c
Topic: 4600 Message: 4600

Anyone going? See second paragraph below:

http://www.arrl.org/news/stories/2009/03/30/10734/?nc=1

The 31st Annual National Hurricane Conference will take place April 6-10 in Austin, Texas. This annual event brings together many disciplines in the Emergency Management field to address tropical events that impact the United States. According to ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, the conference will feature several Amateur Radio presentations catering to Amateur Radio operators, Emergency Management and Non-Governmental Organization (NGO) officials. "This will be Amateur Radio's most significant presence at a National Hurricane Conference," Dura said.

On the afternoon of Tuesday, April 7, Dura said an Amateur Radio Training Workshop will be offered free of charge to Amateur Radio operators, Emergency Management and NGO staff and volunteers attending the Conference. "This has been a yearly tradition at the conference," he said. "In addition, on Wednesday morning, April 8, an Amateur Radio Workshop on Situational Awareness and Disaster Intelligence, as well as an Amateur Radio 'Rap Session,' will be held. For the Wednesday presentation, the conference registration fee is required."

Leaders at WX4NHC, the Amateur Radio station at the National Hurricane Center, Hurricane Watch Net, VoIP Hurricane Net and the ARRL will present various talks at the conference. In addition, Dura will give a presentation on the International Amateur Radio Support Coalition (IRESC). On Tuesday evening at 6, the Austin Amateur Radio Club will host a Texas-style BBQ. Following the dinner, several of the Amateur Radio National Hurricane Conference presenters will give their presentations to the club.

Presenters for the National Hurricane Conference and Austin Amateur Radio Club dinner and presentation include:

John McHugh, K4AG -- WX4NHC National Hurricane Center Amateur Radio Coordinator

Julio Ripoll, WD4R -- Assistant WX4NHC National Hurricane Center Amateur Radio Coordinator

Brad Pioveson, W9FX -- Hurricane Watch Net Assistant Net Manager

Robert Macedo, KD1CY -- Director of Operations for the VoIP Hurricane Net

Gregg Sarratt, W4OZK -- ARRL Southeastern Division Director

Jim Palmer, KB1KQW -- VoIP Hurricane Net Control Scheduler

4601. April 4, 9:30 AM - Moffatt Fire Station - DSTAR Program

Yahoo group: Temple_ARC
Date: 2009-04-04 08:52:10 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 4601 Message: 4601

April 4, 9:30 AM - Moffatt Fire Station - DSTAR Program

Unless there is a problem, I have reserved the meeting hall at the Moffat Fire Department for April 4th. Saturday at TFD is bad because that is their building cleanup day. The address for Moffat VFD is 5660 Lakeaire Blvd. Simplest directions are:

Go west on State Highway 36(toward Gatesville), past Highway 317 about a mile. You will see an EXXON station on the left. As you approach the EXXON, you will turn left on Moffat Road and go behind the station. Continue about 2 miles to Kuykendal Mountain Rd. There will be an arrow sign poiting left at this intersection. Turn left, go about 100 yards. As the road curves right, Lakeaire Blvd turns left. The fire station is on the right about a quarter of a mile. If you eed help, call me at 254-760-3338. 73 Hal N5Jll

Re: [TEMPLE DSTAR] Re: Power Point Programs

A Google map is at http://www.bosshardradio.com/moffat.pdf

Moffatt is off of SH 36 (Temple to Gatesville Road) past the Temple Airport, and past the HWY 317 / HWY 36 Cloverleaf about a mile. There is a gas station and restaurant on HWY 36 at the Moffatt Road intersection where you turn Left on Moffatt Road

From IH35 Exit ADAMS Avenue and go West like going to Gateville, past loop 363, and the Airport and turn Left at the Moffatt store. I will also have my cell - 254 624 4230 turned on.

Take HWY 36 past the Temple Airport to the Moffat Store. Turn Left just ahead of the store on Moffat Road, then a hard Left on Kuykendal Mountain Road, and Left again on Lakeair Blvd. the Fire Station is at 5560 Lake Air Blvd.

73, steve

Hello John and the list,

Gary Pearce and Mel Whitten really deserve credit for the program. I have copied your comments to them. Aside from HF digital voice both are active on DSTAR. Just put KN4AQ or K0PFX in your UR= field and give them a shout. I am glad you enjoyed the HF Voice Video. Gary also produced the VHF Digital Voice video we saw last year.

(Gary / Mel - send any comments for the Temple ARC to bosshard@... and I will forward them to the Temple Texas ARC yahoo list).

Subject: [TexasRACES] NO entrance fee: Austin NHC Conference
To: TexasRACES@yahoogroups.com
Date: Friday, April 3, 2009, 8:03 AM

If you only attend the HAM Radio portion on Tuesday afternoon,
you do not have to pay an entrance fee.
I inquired and was sent this message by "Mail NHC" signed by TERI
If you are attending for the Amateur Radio only, there is no charge.
You will not receive a name tag, you just go directly to their session.

Mike Hankins, ki5m
61-027

4604. TARC Club Meeting April 2,2009

Yahoo group: Temple_ARC
Date: 2009-04-05 15:55:17 UTC
From: ke5nnu
Topic: 4604 Message: 4604

Minutes for April 2, 2009 TARC Club Meeting available on Files, Tarc Files, Minutes, Club Meetings, 2009

4605. Technician Classes

Yahoo group: Temple_ARC
Date: 2009-04-06 02:51:05 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 4605 Message: 4605

Hello List and TARC License Preparation Team,

I believe I can put together a VE team and provide Technician Testing on site at the Church of Christ for the new hams. This might help by being in a familiar environment with folks they are familiar with. We could do the testing one night on your regular class night if I can get the materials in time. Your thoughts?

73, and Thanks for helping bring new folks to the hobby and TARC.

Steve NU5D

4607. Digital Mode Frequency Change

Yahoo group: Temple_ARC
Date: 2009-04-08 17:02:49 UTC
From: Charlie Schlieper
Topic: 4607 Message: 4607

Sometimes changes in "where to operate" a particular DIGITAL MODE are slow to propagate, so I want to pass this one along to the TARC group.

>After much discussion, the Feld Hell club has decided to move the recommended 20 meter calling frequency for Hell Modes to 14.063 MHz (from 14.074.) This is being done to avoid the growing number of digital signals at 074. With this move we will free up 074 for the other modes, and provide Hell operators with a clearer area in which to operate.

>Thank you

>For more information on the move and on operating Hell Modes visit www.feldhellclub.org

From: Jay Urish
Topic: 4615 Message: 4615

Temple ARCians,

Good job on a great hamfest! I had a blast! The weather or threat thereof was a deterrent for lots of folks up here in the metromess, so I hope the fest in October brings out the big crowd. I also hope to be able to do a NTX section booth.

Thanks again!

4616. Air Show

Yahoo group: Temple_ARC
Date: 2009-04-21 08:26:29 UTC
From: k5doa@vvm.com
Topic: 4616 Message: 4616

The air show is coming up in a couple of weeks and I need to finalize the list by the middle of this week. So if you are interesting in volunteering for the usual radio duties please contact me ASAP. The show will not include a Friday session this time. So we only have to staff Saturday May 2 and Sunday May 3. We will be in the trailer again this year, same as last year.

The usual disclaimer applies. This is really not a ham radio communications function. Our primary job is to assign and check in the commercial handhelds used by the volunteers and manage the batteries for the radios. We usually also do a minimal amount of communications on the commercial handhelds in support of the volunteers.

If you volunteer for a three hour shift you will receive a pass for all of both days of the show.

Let me know ASAP. Thanks 73 - Darwin K5DOA

4632. 2009 Field Day Rules

Yahoo group: Temple_ARC
Date: 2009-05-01 15:57:15 UTC
From: Steve S. Bosshard (NU5D)
Topic: 4632 Message: 4632

http://www.arrl.org/contests/rules/2009/fd.html

Field Day 2009 Rules

Field Day Package <http://www.arrl.org/contests/announcements/fd/> ?
Rules in PDF Format
<http://www.arrl.org/contests/forms/fd-2009-rules.pdf> ? Field Day Forms
<http://www.arrl.org/contests/forms/index.html#FD>

1. *Eligibility:* Field Day is open to all amateurs in the areas
covered by the ARRL/RAC Field Organizations and countries within
IARU Region 2. DX stations residing in other regions may be
contacted for credit, but are not eligible to submit entries.
2. *Object:* To work as many stations as possible on any and all
amateur bands (excluding the 60, 30, 17, and 12-meter bands) and
in doing so to learn to operate in abnormal situations in less
than optimal conditions. A premium is placed on developing skills
to meet the challenges of emergency preparedness as well as to
acquaint the general public with the capabilities of Amateur Radio.
3. *Date and Time Period:* Field Day is *always the fourth full
weekend of June*, beginning at 1800 UTC Saturday and ending at
2100 UTC Sunday. *Field Day 2009 will be held June 27-28, 2009.*
1. 3.1. Class A and B (see below) stations that do not begin
setting up until 1800 UTC on Saturday may operate the entire
27-hour Field Day period.
2. 3.2. Stations who begin setting up before 1800 UTC Saturday
may work only 24 consecutive hours, commencing when
on-the-air operations begin.
3. 3.3. No Class A or B station may begin their set-up earlier
than 1800 UTC on the Friday preceding the Field Day period.
4. *Entry Categories: *Field Day entries are classified according to
the maximum number of /simultaneously/ transmitted signals,
followed by a designator indicating the nature of their individual
or group participation. Twenty (20) transmitters maximum are
eligible for the purpose of calculating bonus points (2,000 points
maximum). However, additional transmitters may be used
simultaneously in determining your entry category. Switching and
simulcasting devices are prohibited. *Bonus stations, such as the
GOTA station and satellite station do not count towards
determining the number of transmitters for the class and do not
qualify for transmitter bonus points.*
1. *4.1. (Class A) Club / non-club portable:* Club or a
non-club group of three or more persons set up specifically
for Field Day. Such stations must be located in places that
are not regular station locations and must not use
facilities installed for permanent station use, or use any

structure installed permanently for Field Day. A single licensee or trustee for the entry is responsible for the group entry. All equipment (including antennas) must lie within a circle whose diameter does not exceed 300 meters (1000 feet). To be listed as Class A, all contacts must be made with transmitter(s) and receiver(s) operating independent of commercial power mains. Entrants whom for any reason operate a transmitter or receiver from a commercial main for one or more contacts will be listed separately as Class A-Commercial.

1. *4.1.1. Get-On-The-Air (GOTA) Station*. Any Class A (or F) entry whose transmitter classification is two or more transmitters may also operate one additional station without changing its base entry category, known as the GET-ON-THE-AIR (GOTA) station. *This GOTA station may operate on any Field Day band, HF or VHF, but is limited to one transmitted signal at any time.*
1. 4.1.1.1. This station *must* *use* a different callsign from the primary Field Day station. The GOTA station must use the same callsign for the duration of the event regardless if operators change. *The GOTA station uses the same exchange as its parent.*
2. 4.1.1.2. *The GOTA station may be operated by any person licensed since the previous year?s Field Day, regardless of license class. It may also be operated by a generally inactive licensee. Non-licensed persons may participate under the direct supervision of an appropriate control operator. A list of operators and participants must be included on the required summary sheet to ARRL HQ.*
3. *4.1.1.3. As per FCC rules, this station must have a valid control operator present if operating beyond the license privileges of the participant using the station.*
4. 4.1.1.4. The maximum transmitter output power for the GOTA station shall be* 150 watts*. If the primary Field Day group is claiming the QRP multiplier level of 5, the maximum transmitter output power of the GOTA station may not exceed 5 watts.
5. *4.1.1.5. A maximum of 500 QSOs made by this station may be claimed for credit by its primary Field Day operation. In addition, bonus points may be earned by this station under rule 7.3.13.*
6. *4.1.1.6. The GOTA station may operate on any Field Day band. Only one transmitted signal is allowed from the GOTA station at any time.*
7. 4.1.1.7. The GOTA station does not affect the

additional VHF/UHF station provided for under
Field Day Rule 4.1.2. for Class A stations.
8. 4.1.1.8. Participants are reminded that
non-licensed participants working under the
direction of a valid control operator may only
communicate with other W/VE stations or with
stations in countries with which the US has
entered a third-party agreement.
9. *4.1.1.9. The GOTA station does not qualify as
an additional transmitter when determining the
number of transmitters eligible for the
100-point emergency power bonus under Rule 7.3.1.*
2. 4.1.2. *Free VHF Station:* Any Class A entry whose
category is two or more transmitters may also operate*
one additional transmitter* if it operates exclusively
on any band or combination of bands above 50 MHz
(VHF/UHF) without changing its basic entry
classification. *This station does not qualify for a
100-point bonus as an additional transmitter*. This
station may be operated for the clubs Field Day period
and all contacts count for QSO credit. It is operated
using the primary callsign and exchange of the main
Field Day group and is separate and distinct from the
GOTA station.
2. *4.2. (Class A - Battery) Club / non-club portable*: Club or
non-club group of three or more persons set up specifically
for Field Day. All contacts must be made using an output
power of 5 Watts or less *and* the power source must be
something other than commercial power mains or motor-driven
generator (e.g.: batteries, solar cells, water-driven
generator). Other provisions are the same for regular Class
A. Class AB is eligible for a GOTA station if GOTA
requirements are met.
3. *4.3. (Class B) One or two person portable:* A Field Day
station set up and operated by no more than two persons.
Other provisions are the same for Class A except it is not
eligible for a GOTA or free VHF station. One and two person
Class B entries will be listed separately.
4. *4.4. (Class B - Battery) One or two person portable:* A
Field Day station set up and operated by no more than two
persons. All contacts must be made using an output power of
5 Watts or less *and* the power source must be something
other than commercial mains or motor-driven generator. Other
provisions are the same for Class A except it is not
eligible for a GOTA or free VHF station. One and two person
Class B - Battery entries will be listed separately.
5. *4.5. (Class C) Mobile:* Stations in vehicles capable of
operating while in motion and normally operated in this
manner. This includes maritime and aeronautical mobile. If
the Class C station is being powered from a car battery or

alternator, it qualifies for emergency power but does not qualify for the multiplier of 5, as the alternator/battery system constitutes a motor-driven generating system.
6. *4.6. (Class D) Home stations*: Stations operating from permanent or licensed station locations using commercial power. Class D stations may only count contacts made with Class A, B, C, E and F Field Day stations.
7. *4.7. (Class E) Home stations - Emergency power*: Same as Class D, but using emergency power for transmitters and receivers. Class E may work all Field Day stations.
8. *4.8. (Class F) Emergency Operations Centers (EOC)*: An amateur radio station at an established EOC activated by a club or non-club group. Class F operation must take place at an established EOC site. Stations may utilize equipment and antennas temporarily or permanently installed at the EOC for the event. Entries will be reported according to number of transmitters in simultaneous operation. Class F stations are eligible for a GOTA and free VHF station at Class 2F and above.
1. 4.8.1. For Field Day purposes, an Emergency Operations Center (EOC) is defined as a facility established by:
2. a) a Federal, State, County, City or other Civil Government, agency or administrative entity; or,
3. b) a Chapter of a national or international served agency (such as American Red Cross or Salvation Army) with which your local group has an established operating arrangement;
4. 4.8.1.1. A private company EOC does not qualify for Class F status unless approved.
5. 4.8.2. Planning of a Class F operation must take place in conjunction and cooperation with the staff of the EOC being activated.
6. 4.8.3. Other provisions not covered are the same as Class A.
7. 4.8.4. A Class F station may claim the emergency power bonus if emergency power is available at the EOC site.
1. *4.8.4.1. The emergency power source must be tested during the Field Day period but you are not required to run the Class F operation under emergency power.*
5. *Exchange:* Stations in ARRL / RAC sections will exchange their Field Day operating Class and ARRL / RAC section. Example: a three transmitter class A station in Connecticut which also has a GOTA station and the extra VHF station would send "3A CT" on CW or "3 Alpha Connecticut" on Phone. DX stations send operating class and the term DX (i.e. 2A DX).
6. *Miscellaneous Rules:*
1. 6.1. A person may not contact for QSO credit any station from which they also participate.
2. 6.2. A transmitter/receiver/transceiver used to contact one or more Field Day stations may not subsequently be used

under any other callsign to participate in Field Day. Family stations are exempt provided the subsequent callsign used is issued to and used by a different family member.
3. 6.3. Phone, CW and Digital (non-CW) modes on a band are considered as separate bands. A station may be worked only once per band under this rule.
4. 6.4. All voice contacts are equivalent.
5. 6.5. All non-CW digital contacts are equivalent.
6. 6.6. Cross-band contacts are not permitted (Satellite QSOs cross-band contacts are exempted).
7. 6.7. The use of more than one transmitter at the same time on a single band-mode is prohibited. Exception: a dedicated GOTA station may operate as prescribed in Rule 4.1.
8. 6.8. No repeater contacts are allowed.
9. 6.9. Batteries may be charged while in use. Except for Class D stations, the batteries must be charged from a power source other than commercial power mains. To claim the power multiplier of five, the batteries must be charged from something other than a motor driven generator or commercial mains.
10. 6.10. All stations for a single entry must be operated under one callsign, except when a dedicated GOTA station is operated as provided under Field Day Rule 4.1.1. it uses a single, separate callsign.
7. *Scoring:* Scores are based on the total number of QSO points times the power multiplier corresponding to the highest power level under which any contact was made during the Field Day period plus the bonus points.
1. * 7.1. QSO Points:*
1. 7.1.1. Phone contacts count one point each.
2. 7.1.2. CW contacts count two points each.
3. 7.1.3. Digital contacts count two points each.
2. *7.2. Power multipliers*: The power multiplier that applies is determined by the highest power output of any of the transmitters used during the Field Day operation.
1. 7.2.1. If all contacts are made using a power of 5 Watts or less */and/* if a power source other than commercial mains or motor-driven generator is used (batteries, solar cells, water-driven generator), the power multiplier is 5 (five).
2. 7.2.2. If all contacts are made using a power of 5 Watts or less, but the power source is from a commercial main or from a motor-driven generator, the power multiplier is 2. If batteries are charged during the Field Day period using commercial mains or a motor-driven generator the power multiplier is 2 (two).
3. 7.2.3. If any or all contacts are made using an output power up to 150 Watts or less, the power multiplier is 2 (two).
4. 7.2.4. If any or all contacts are made using an output

power greater than 150 Watts, the power multiplier is
1 (one).
5. 7.2.5. The power multiplier for an entry is determined
by the maximum output power used by any transmitter
used to complete any contact during the event.
(Example: a group has one QRP station running 3 Watts
and a second station running 100 Watts, the power
multiplier of 2 applies to all contacts made by the
entire operation).
3. *7.3. Bonus Points:* *All stations are eligible for certain
bonus points, depending on their entry class.* The following
bonus points will be added to the score, after the
multiplier is applied, to determine the final Field Day
score. Bonus points will be applied only when the claim is
made on the summary sheet and any proof required accompanies
the entry or is received via email or normal mail delivery.
1. *7.3.1. 100% Emergency Power*: 100 points per
transmitter classification if all contacts are made
only using an emergency power source up to a total of
20 transmitters *(maximum 2,000 points.) GOTA station
and free VHF Station for Class A and F entries do not
qualify for bonus point credit and should not be
included in the club?s transmitter total. *All
transmitting equipment at the site must operate from a
power source completely independent of the commercial
power mains to qualify. (Example: a club operating 3
transmitters plus a GOTA station and using 100%
emergency power receives 300 bonus points.)* Available
to Classes A, B, C, E, and F.*
2. *7.3.2. Media Publicity*: 100 bonus points may be
earned for attempting to obtain publicity from the
local media. A copy of the press release, or a copy of
the actual media publicity received (newspaper
article, etc) must be submitted to claim the points.
Available to all Classes.
3. *7.3.3. Public Location*: 100 bonus points for
physically locating the Field Day operation in a
public place (i.e. shopping center, park, school
campus, etc). The intent is for amateur radio to be on
display to the public. *Available to Classes A, B and F.*
4. *7.3.4. Public Information Table:* 100 bonus points
for a Public Information Table at the Field Day site.
The purpose is to make appropriate handouts and
information available to the visiting public at the
site. A copy of a visitor's log, copies of club
handouts or photos is sufficient evidence for claiming
this bonus. *Available to Classes A, B and F.*
5. *7.3.5. Message Origination to Section Manager*: 100
bonus points for origination of a National Traffic
System (NTS) style formal message to the ARRL Section

Manager or Section Emergency Coordinator by your group from its site. You should include the club name, number of participants, Field Day location, and number of ARES operators involved with your station. The message must be transmitted during the Field Day period and a fully serviced copy of it must be included in your submission, in standard ARRL NTS format, or no credit will be given. The Section Manager message is separate from the messages handled in Rule 7.3.6. and may not be claimed for bonus points under that rule.* **Available to all Classes.*
6. *7.3.6. Message Handling*: 10 points for each formal NTS style originated, relayed or received and delivered during the Field Day period, up to a maximum of 100 points (ten messages). Properly serviced copies of each message must be included with the Field Day report. *The message to the ARRL SM or SEC under Rule 7.3.6. does not count towards the total of 10 for this bonus. **Available to all Classes. All NTS messages claimed for bonus points must leave or enter the site via amateur radio RF.*
7. *7.3.7. Satellite QSO*: 100 bonus points for successfully completing at least one QSO via an amateur radio satellite during the Field Day period. "General Rules for All ARRL Contests" (Rule 3.7.2.), (the no-repeater QSO stipulation) is waived for satellite QSOs. Groups are allowed one dedicated satellite transmitter station without increasing their entry category. Satellite QSOs also count for regular QSO credit. Show them listed separately on the summary sheet as a separate "band." You do not receive an additional bonus for contacting different satellites, though the additional QSOs may be counted for QSO credit unless prohibited under Rule 7.3.7.1. The QSO must be between two Earth stations through a satellite. *Available to Classes A, B, and F.*
1. 7.3.7.1 Stations are limited to one (1) completed QSO on any single channel FM satellite.
8. *7.3.8. Alternate Power*: 100 bonus points for Field Day groups making a minimum of five QSOs without using power from commercial mains or petroleum driven generator. This means an "alternate" energy source of power, such as solar, wind, methane or water. This includes batteries charged by natural means (not dry cells). The natural power transmitter counts as an additional transmitter. If you do not wish to increase your operating category, you should take one of your other transmitters off the air while the natural power transmitter is in operation. A separate list of natural power QSOs should be submitted with your

entry. *Available to Classes A, B, E, and F.*
9. *7.3.9. W1AW Bulletin*: 100 bonus points for copying the special Field Day bulletin transmitted by W1AW (or K6KPH) during its operating schedule during the Field Day weekend (listed in this rules announcement). An accurate copy of the message is required to be included in your Field Day submission. (Note: The Field Day bulletin must be copied via amateur radio. It will not be included in Internet bulletins sent out from Headquarters and will not be posted to Internet BBS sites.)* Available to all Classes.*
10. *7.3.10. *Educational activity bonus: One (1) 100-point bonus may be claimed if your Field Day operation includes a specific educational-related activity. The activity can be diverse and must be related to amateur radio. It must be some type of formal activity. It can be repeated during the Field Day period but only one bonus is earned. For more information consult the FAQ in the complete Field Day packet.* Available to Classes A & F entries and available clubs or groups operating from a club station in class D and E with 3 or more participants.*
11. *7.3.11. Site Visitation by an elected governmental official*: One (1) 100-point bonus may be claimed if your Field Day site is visited by an elected government official as the result of an invitation issued by your group. *Available to all Classes.*
12. *7.3.12. Site Visitation by a representative of an agency*: One (1) 100-point bonus may be claimed if your Field Day site is visited by a representative of an agency served by ARES in your local community (American Red Cross, Salvation Army, local Emergency Management, law enforcement, etc) as the result of an invitation issued by your group. ARRL officials (SM, SEC, DEC, EC, etc) do not qualify for this bonus. *Available to all Classes. *
13. * 7.3.13**. GOTA Bonus. Class A and F stations operating a GOTA station may earn the following bonus points:*
1. *7.3.13.1. When a GOTA operator successfully completes 20 QSOs, they receive 20 bonus points. Upon reaching an additional 20 QSOs the same operator receives a second 20 bonus points, up to a maximum of 100 Bonus points per GOTA operator. An operator may make more than 100 QSOs but the QSOs over 100 do not qualify for an additional bonus. *
1. *7.3.13.1.1. Additional GOTA operators may earn the GOTA bonus points under this rule, up to the maximum of 500 bonus

points. (Remember that there is a 500-QSO
limit for the GOTA station. But no single
GOTA operator may earn more than 100 of
the GOTA bonus points except as provided
in 7.3.13.2.)*
2. * 7.3.13.1.2. A single GOTA operator must
complete all 20 QSOs required before the
bonus is earned. There is no ?partial
credit? for making only a portion of the
20 QSOs or ?pooling? QSOs between operators.*
2. *7.3.13.2. If a GOTA station is supervised
full-time by a GOTA Coach, the bonus points
earned for each 20 QSOs completed under Rule
7.3.13.1 will be doubled.*
3. * 7.3.13.2.1. The GOTA Coach supervises the
operator of the station, doing such things as
answering questions and talking them through
contacts, but may not make QSOs or perform
logging functions.*
4. *7.3.13.2.2. To qualify for this bonus, there
must be a designated GOTA Coach present and
supervising the GOTA station at all times it is
being operated.*
14. *7.3.14. Web submission:* A 50-point bonus may be
claimed by a group submitting their Field Day entry
via the www.b4h.net/cabforms
<http://www.b4h.net/cabforms> web site. *Available to
all Classes.*
15. 7.3.15.1. A 20-point bonus (maximum of 100) may be
earned by any Class A, C, D, E, or F group for each
participant age 18 or younger at your Field Day
operation that completes at least one QSO.
16. 7.3.15.2. For a 1-person Class B station, a 20-point
bonus is earned if the operator is age 18 or younger.
For a 2-person Class B station, a 20-point bonus is
earned for each operator age 18 or younger (maximum of
40 points.) Keep in mind that Class B is only a 1 or 2
person operation. This bonus does not allow the total
number of participants in Class B to exceed 1 or 2.
8. *8. Reporting:*
1. * 8.1. Entries may be submitted to the ARRL in one of three
ways:*
1. * 8.1.1. Via Field Day Web Submission Applet site at
www.b4h.net/cabforms/ <http://www.b4h.net/cabforms/>;*
2. * 8.1.2. Via email to fieldday@...
<mailto:fieldday@...>; or*
3. *8.1.3. Via land postal or delivery service to Field
Day Entries, 225 Main St, Newington, CT 06111.*
2. * 8.2. Entries must be postmarked, emailed or submitted by
July 28, 2009. Late entries cannot be accepted.*

3. 8.3. A complete Field Day Web Applet Submission site entry consists of:
1. 8.3.1. An official ARRL summary sheet which is completed on the site;
2. 8.3.2. Supporting information must be emailed to fieldday@... <mailto:fieldday@...> or submitted by land service. Supporting information must include:
1. 8.3.2.1. An attached list of stations worked by band/mode during the Field Day period (dupe sheet or an alpha/numeric list sorted by band and mode); and
2. 8.3.2.2. Proof of all bonus points claimed (copies of visitor logs, press releases, NTS messages handled, photographs, etc).
4. 8.4. A complete non-applet email submission consists of:
1. 8.4.1. An electronic copy of an ARRL summary sheet completely and accurately filled out;
2. 8.4.2. An attached list of stations worked by band/mode during the Field Day period (dupe sheet or an alpha/numeric list sorted by band and mode); and
3. 8.4.3. Proofs of bonus points claimed (copies of visitor logs, press releases, NTS messages handled, photographs, etc).
5. 8.5. A complete land postal or delivery non-electronic submission consists of:
1. 8.5.1. A complete and accurate ARRL summary sheet;
2. 8.5.2. An accompanying list of stations worked by band/mode during the Field Day period (dupe sheet or an alpha/numeric list sorted by band and mode); and
3. 8.5.3. Proofs of bonus points claimed (copies of visitor logs, press releases, NTS messages handled, photographs, etc).
6. *8.6. Complete station logs are not required for submission. The club should maintain log files for one year in case they are requested by ARRL HQ.*
7. *8.7. Cabrillo format log files are not required for Field Day entries. They will be accepted in lieu of the dupe sheets but do not substitute for a summary sheet.*
8. 8.8. Digital images of proof of bonus points are acceptable.
9. 8.9. Electronic submissions are considered signed when submitted.
9. *9. Miscellaneous:*
1. 9.1. The schedule of bulletin times for W1AW is included in this announcement. While W1AW does not have regular bulletins on weekends, the Field Day message will be sent according to the schedule included with this announcement. The W1AW bulletins will be transmitted on the regular W1AW frequencies listed in /QST/. The PSK31 bulletin will be transmitted on the W1AW teleprinter frequencies.

1. 9.1.2. The special Field Day bulletin will be
transmitted from station K6KPH on the West Coast as
included in the bulletin schedule.
2. 9.2. See "General Rules for All ARRL Contests," "General
Rules for All ARRL Contests on Bands Below 30 MHz," and
"General Rules for All ARRL Contests on Bands Above 50 MHz"
for additional rules (www.arrl.org/contests/forms
<http://www.arrl.org/contests/forms>) that may cover
situations not covered in these Field Day rules.
3. 9.3. Remember that the national simplex FM calling frequency
of 146.52 MHz should not be used for making Field Day contacts.
4. 9.4. The complete Field Day information package may be
obtained by:
1. 9.4.1. Sending a SASE with 5 units of postage to:
Field Day Information Package, ARRL, 225 Main St.,
Newington, CT 06111; or
2. 9.4.2. By downloading from the Contest Branch home
page at: www.arrl.org/contests/forms
<http://www.arrl.org/contests/forms>
5. 9.5. For more Field Day information/questions contact:
fdinfo@... <mailto:fdinfo@...> or phone (860)
594-0236.

4640. Morse code demonstration for Western Hills elementary

Yahoo group: Temple_ARC
Date: 2009-05-14 00:45:03 UTC
From: Myron Mesecke
Topic: 4640 Message: 4640

My wife is a 5th grade teacher at Western Hills elementary in Temple. She wants me to ask if there are any club members who might be willing to demonstrate Morse code. Some of her kids were asking how anyone can understand Morse code. She wants to try to set it up for Friday May 29th. That is career day and even though telegraphy is no longer a career if it gets any of the kids interested in electronics, science or just ham radio it would be worth the effort.

So as to not have too many kids at any one time the school usually has speakers at career day do four sessions. It would probably just be 4th and 5th graders.

If Friday May 29th isn't a good day my wife says any day would be fine.

Contact me if anyone is interested.

Subject: [TARC] Morse code demonstration for Western Hills elementary

My wife is a 5th grade teacher at Western Hills elementary in Temple. She wants me to ask if there are any club members who might be willing to demonstrate Morse code. Some of her kids were asking how anyone can understand Morse code. She wants to try to set it up for Friday May 29th. That is career day and even though telegraphy is no longer a career if it gets any of the kids interested in electronics, science or just ham radio it would be worth the effort.

So as to not have too many kids at any one time the school usually has speakers at career day do four sessions. It would probably just be 4th and 5th graders.

If Friday May 29th isn't a good day my wife says any day would be fine.

Contact me if anyone is interested.

Hi ALL,
I just wanted to let everyone know if they are looking for some ham radios that I have some new HT for sale.
They are.
Yaesu VX-7R And they are Black for $210.00 ea. have 2 of them. And I have a Yaesu FT-857D with the YSK-857 separation KIT new as well $575.00 they can reach me on my cell phone.Trying to clean some of this stuff up, also have some 2 older B&K Generators I want to get rid of they are E-200D and 2040 RF Signal Generator $100.00 ea. they both work. and a 15MHz Ocilloscope with probes $100.00 works great as well. Or just e-mail me.
254-231-6593
Thanks Bobby KB7UNA 73s

4647. Ham Radio Opportunity - Ham Radio in Schools

Yahoo group: Temple_ARC
Date: 2009-05-27 16:17:39 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 4647 Message: 4647

I just received the following email from Matt Curtis (M1CMN) in Folkestone Kent, UK. Matt would still like to facilitate a link-up between a grade school in the US and a similar arrangement in the UK.

John Hobson from TARC wanted to do this between his wife's class in Killeen and the UK earlier this year but the folks in Killeen never replied to Matt's emails, so we dropped the ball on the Technology Day (March) event.

School will soon be letting out for the summer here in the US, so time is pretty short. The presentation would have to take place early in the morning here in the US due to the 6 hour time zone difference between England and the US.

Is anyone in the area interested in spending a couple of hours one morning and does anyone have a contact with one of the area schools within DSTAR range or with a good internet connection for a DV Dongle connection, that would like to participate. Also US 3rd Party traffic rules prevent contact between the kids and folks in some countries that do not have a 3rd Party agreement with the US (Same as applies to the ISS).

With the Reflector Systems and DPlus linking we could even have several schools in Texas or beyond linked up.

This is a great opportunity to visit cultural differences between students in the US and the UK.

Please REPLY ALL so all parties can be involved if you would like to comment or participate.

73, Steve NU5D

K5CTX, Temple Texas DSTAR

Hi Steve,

Am really keen to sort something, did you hear anything back from your team? Maybe over the next 2 weeks we could arrange a day?

Hope you and Diana are well, I haven?t spoken to you in ages, or Ray.

Weather here isn?t good, raining, and miserable L

4649. VHF RF Module for Yaesu FT-51R

Yahoo group: Temple_ARC
Date: 2009-05-28 19:38:08 UTC
From: kd5eki
Topic: 4649 Message: 4649

Looking for a place to get a vhf 7watt rf module for ft51r HT. for less than $30.00 does anyone know of any stores that carry them besides RF-PARTS?

4650. Repeater use heads up

Yahoo group: Temple_ARC
Date: 2009-05-29 01:39:32 UTC
From: Myron Mesecke
Topic: 4650 Message: 4650

Just wanted to let everyone know about this coming Saturday morning, May 30th. The Temple Kiwanis is holding their Tour d' Temple Bike Rally. Members of both TARC and CTARC are working this event. The plan is to use the 147.14 repeater. But I wanted to announce that should anything happen to the 147.14 machine we will use the 146.82 repeater as a backup.

Thanks.

4652. Power Switch Fix for Yaesu FT-847

Yahoo group: Temple_ARC
Date: 2009-06-01 23:46:36 UTC
From: Charlie Schlieper
Topic: 4652 Message: 4652

It is a known problem that the OFF/ON power switch on a Yaesu FT-847 has given some problems. However, I was lucky until yesterday, but my luck finally ran out. When I pushed my power switch ON, it would not stay ON. I found a quick and easy fix to get my FT-847 working again. Perhaps others could find this useful.

The "DETENT LATCH" of my POWER SWITCH was still working, but the power wouldn't stay on without holding it down further than the latch position allowed. At first I shaved off a tiny piece of wood from a q-tip, and jammed that in the switch, but knew that was nothing but a red-neck solution.

Going inside to troubleshoot it with a Service Manual, I was able to find a quick and easy fix! In my particular production run, half of a Double Pole Switch wasn't even used, so I used my DM-73 hand-held multimeter to check the switch continuity of both sides, (with the power cable disconnected). The regular used side was "flakey," but the unused side was good. I then soldered two "tiny wire jumpers" across the back sides of the switch contacts. It works again like new!

While I may have to go back in later and either "clean" the contacts (which are difficult to get to), or replace the switch, this was certainly an easy fix for now. (Before doing this, be sure to check YOUR particular radio production run to insure Yaesu didn't use the other side of the power switch!)

Enjoy Ham Radio!

I am simply in a state of Shock. I talked to him on the radio last evening and saw Charlie & Kay driving down the street in front of our houses this morning. The club and the Amateur community as a whole have lost a very dear and valued friend. My condolences go out to Kay and Carl and their family.

4675. N5TD Memorial: The Charles Schlieper Technical Scholarship Fund

Yahoo group: Temple_ARC
Date: 2009-06-14 05:40:10 UTC
From: john_ke5c
Topic: 4675 Message: 4675

Visit http://www.tarc.org to make an online donation to the N5TD Memorial Fund c/o the Temple Amateur Radio Club. All donations will go toward establishing the Charles Schlieper Technical Scholarship at Temple College. The Temple Amateur Radio Club will be asked to (at least) match your contributions. Charlie enjoyed teaching more than any other aspect of amateur radio. Every club activity was an opportunity for Charlie to teach what he knew to others. The classes he taught were obviously so, but his Field Day setup, his meeting presentations, even his informal experimenting reported at coffee were opportunities to share with the rest of us what he had recently learned. Please honor Charlie's tradition of teaching with your contribution. You may also contribute at the next club meeting or by mailing your check to the Temple Amateur Radio Club; P.O. Box 616; Temple, TX 76503.

Hello All,

I got the news yesterday that Charlie N5TD passed away. Like one who posted to the TARC reflector shortly after the news came out, I too am stunned by the news.

Charlie was for many of us, our Elmer. A kind, gentle soul who introduced us to the hobby that he enjoyed so much. I have known Charlie for about 25 years. Shortly after high school, a group of us who were all in our late teens were taught our license class and so much more by Charlie. He would invite us to his home to teach us the hobby, show us how to be good operators and how to enjoy ham radio.

Charlie was one of the most intelligent, talented electronic geniuses I've known. I don't use that word genius lightly either. Charlie was a brilliant man. Out of the group of 5 or 6 of us teens who Charlie Elmer'ed all those years ago, almost all have worked in the electronics field at one point or other. Charlie's knowledge of electronics was phenomenal. He also had the unique ability to teach both the book knowledge of the field and to inspire a passion for it in those he mentored.

Charlie and his wife Kay invited so many into their hobby and their lives. Almost every ham in the area has been mentored, encouraged, or taught in the hobby by Charlie and Kay. My life has been much richer in knowing him. While I am saddened to know that he is gone I can't help but be cheered by knowing that his was a life well lived and that I got to be a part of it.

Kay, we mourn with you. I hope that you know how much we all admired Charlie.

73, N5TD de N5JLQ

4689. Thoughts of Charlie

Yahoo group: Temple_ARC
Date: 2009-06-14 23:42:20 UTC
From: Hal and Cindy Pagel
Topic: 4689 Message: 4689

Like so many hams out there, I have spent that last day in thought about my friend. I was fortunate to have met Charlie and Kay nearly 40 years ago. Back then we were using what has been known as the "chicken band". This was back in the days when CB was a fun, family hobby,much the same as ham is today. Charlie was "Battery Charger". They lived up in a small house on ?4th or 6th street. I, along with other radio operators, would go to Charlie and Kay's to visit and to seek help with electronic problems. Never once were we turned away. In later years, Charlie taught the class that allowed me to get my Novice ticket and my Tech ticket. No matter how many 'dumb' questions I came up with, Charlie was always there to explain and help me. I will always hold the memory of my friend in my heart.

I thought also that if every person who's life has been touched by Charlie came on Wednesday, we would have to move it to the Expo for enough room. Through ham radio, teaching at TJC, work at KTEM/KPLE and many other intrests he had, Charlie touched hundreds if not thousands of lives.

To Kay, my prayers go out to you. May you find peace from God that Charlie is never really gone. His spirit lives in the minds and hearts of those he touched and loved. Our world is a better place because of him. We are better people because of Charlie.

To my friend Battery Charger, may God give you the love you gave us. 73

Charles R. Schlieper, Jr.

August 26, 1935 - June 13, 2009

Charles R. Schlieper, Jr., age 73, of Temple died Saturday, June 13, 2009 at his residence where he has resided for the past 39 years. Services will be held at 10 a.m. Wednesday, June 17 at Scanio-Harper Funeral Home in Temple with Rev. Robert Baugh officiating. Burial with military honors will follow in the Hillcrest Cemetery in Temple.

Mr. Schlieper was born August 26, 1935, in Cleburne to Charles R. Schlieper, Sr. and Euna Mae Raines Schlieper. He married Barbara Kay Edwards Schlieper on Oct. 2, 1964 in Cleburne. He was a graduate of Del Mar College, Temple College, and University of Mary-Hardin Baylor. He had completed all FEMA training courses and was recently ranked number 2 in the nation for the number of Meteorology Training courses completed. He had a passion for education. He felt it had been a day wasted, if he had not studied or learned at least one new thing that day. After serving in the U.S. Air Force for over 9 years, he worked over 20 years as Broadcast Engineer for several central Texas radio stations. In 1979 he developed the first Electronics Technology Department for Temple College and worked as Department Chairman and Instructor until he retired in 1996. He had been an amateur radio operator, for which he had an immeasurable passion for 58 years. He was a Master Certified Electronics Technician, Life member of The Society of Broadcast Engineers, member of ARRL, RACES District Radio Officer for Bell County and 12 other counties and a lifetime member of the Temple Amateur Radio Club and was serving as Technical Director and Education Chairman. He gained such pleasure from helping and elmering others to develop their skills in ham radio or electronics and always lived the philosophy "never put off till tomorrow, what can be done today."

He was preceded in death by his mother, Euna Mae Schlieper and a brother, Paul Schlieper. Survivors include his wife, Kay; his son, Carl Robert Schlieper of Temple; two grandchildren, Ashley Schlieper of Temple, and Kayla Schlieper of Westminster, CO; his father, Charles Schlieper, Sr. of Temple, and one brother, William Schlieper of Fort Worth and one sister, Carolyn Hussey of Fort Worth.

It is with great regret that it is necessary by the turn of events to have to state my condolences to Kay, Carl and the rest of the Schlieper clan how much I will miss Charlie.

Charlie and Kay have been friends of mine for almost 40 years....yes we go way back. Charlie and I at one time had consecutive call signs but of course his was ahead of me.

Kay, if there is anything I can do to be of help please let me know. Losing ones spouse is a terrible experience, as Jim W5RYV and I can attest. May you find some peace knowing that Charlie is no longer suffering and is in a better place.

What a shock to get the phone call about Charlie passing. Amateur Radio has lost a major supporter and Elmer. Charlie has helped countless people learn about amateur radio and become ham operators over the years. He talked to me about getting a ham license since I already had a commercial license. I finally took the bait and Charlie gave me a tech test at his house back in the mid 70s. Like many others, I owe Charlie for helping me into ham radio. My wife Sherry, WD5GGS, said she was glad we went out to eat with Charlie and Kay not long before Charlie's death. We had no idea it would be the last time we sat down to eat together. I talked to Charlie on the 82 repeater the morning he passed away and again there was no warning it would be our last QSO. You never know when the end comes for life and or relationships. I will miss Charlie as will many others.

I pray for comfort for Kay and Carl in this most difficult time of loss. Good by old friend .

From: Kay Schlieper
Topic: 4696 Message: 4696

To everyone who has called, sent cards, or written messages of condolence, or shown support in other ways, my family & I thank you for sharing some of your thoughts and memories of your experiences with Charlie. Anyone who knew Charlie knew he did truly love Ham Radio and experimenting with all aspects of it. He looked forward to when something new came out just so he would have something new to experiment with. He loved to learn how things worked, and then to share what he'd learned with any others he could get to listen to him. He actually seemed to draw nourishment from helping others solve their technical problems. So, do him proud and keep spreading the spirit of ham radio, get on the frequencies and keep the air waves flowing, embrace the hobby and enjoy it to the fullest, and learn all you can learn then pass it on to someone else.

Kay Schlieper, KB5DC & family

Kay,
This email brought back another memory from Robert & Charlie's wanting to always "out-do" the other. I remember comming home one day to find Robert spray painting an old HT Case bright gold. He went so far as to put on little sticky numbers to take the HT to Coffee the next morning. Robert had Charlie convinced he had just bought a "gold, limited edition" of one of the new HTs from the "Candy Store". Evidently Charlie called every HAM store in Texas and the Country trying to find that "special, gold, limited edition". Robert finally "fessed up" to his meaness! I don't know what N5TD did to get "W7KPW" back, but I'm sure he thought of something. I'm wondering what the two of them are up to in Heaven right now. It has to be over an old nickle a cup Whataburger Coffee Cup! Eula

4701. Reflector 4B - Tuesday Night Statewide Net - Maybe NOT - will see.

Yahoo group: Temple_ARC
Date: 2009-06-22 01:29:25 UTC
From: Steven Samuel Bosshard (NU5D)
Topic: 4701 Message: 4701

Mike Wolthuis graciously provides reflector use for the Texas Lone Star Linkup and Tuesday Night Nets on his Reflector 4B. He posted the following on the Gateway List:

So everyone is aware.

We have MAJOR flooding this weekend starting Friday night-Saturday in Michigan. The Data NOC where ref004 was required to be shutdown for safety of crews and emergency maintenance. I was not able to even get access to any of my server racks. The generator could not be started due to amount of water damage(we tried) and the batteries finally died in the NOC.

The water resided late Saturday and we got the generator on and power restored today. The fiber also had issues, but has been repaired and restored.

I see that drefd is not set as a service to auto start on the server and Robin had to do it. I will work with Robin to fix this.

I believe our data NOC has been restored to 100%, but after working non-stop days I am exhausted and not able to guarantee things back to normal at this time.

I will try to watch it closer and check further after some sleep!

Sorry everyone, that's severe weather for yah!

Mike

4703. Antennas

Yahoo group: Temple_ARC
Date: 2009-06-24 21:15:16 UTC
From: Brad Hyde
Topic: 780 Message: 4703

Hello all,
I am in the process of moving. One of the many things I remember about Charlie was that he was very generous. He would often "sell" items for little or nothing. I think it was his way of promoting the hobbie maybe. Anyway, I have a 14 element circularly polarized beam that I used for working the OSCAR satellite. In fact my first contact on OSCAR 10 satellite was with my satellite mentor, Charlie. This is the two meter 14 C by KLM. I also have a two meter ground plane antenna as well as two commercial 3 element beam VHF antenna's like the ones that you used to see on the police towers. I will give these to whom ever calls me first, in the memory of Charlie and his kind, generous ways. They are located in Harker Heights. My cell is 254-702-7986.

Thanks,
Brad

Tidelands Amateur Radio Society (Texas City) HAMFEST....JULY 11th

The Texas City (Tidelands Amateur Radio Society) Hamfest is rapidly approaching. The event, to be held on July 11th at the Doyle Convention Center, 2010 5th avenue North in Texas City, will have major Radio and equipment Vendors, Food Vendor, Hat and sign vendors flea market tables, a Grand Prize, Hourly and unscheduled prizes. We will have a Hidden Transmitter Hunt, a Left Foot CW contest. Amateur Exams will be administered by our Tidelands VE Team and a Forum will be given on a Antennas.

The event is held in the Doyle Convention Center, a large carpeted, Air Conditioned modern Bldg. with plenty of close by free parking.

Tables are available in the main Convention Room at $7.00 each. Electricity is available but be sure to bring your extension cord and multi outlet. Admission to the Hamfest, regardless if you have a table or not is $5.00 at the door and $4.00 mail in pre admission.

Commercial Vendor tables are $15 each with no admission fee.

We look forward to seeing you at the Texas City Hamfest on July 11th. Doors open to the public at 8AM. Flea market Tables may be claimed at 7AM.

Talk in frequency's (Primary) 147.140+ 167.9 tone (Secondary) 442.025+ 103.5 tone

For additional information, please check our our Web site at http://tidelands.org/

4705. Field Day this Weekend

Yahoo group: Temple_ARC
Date: 2009-06-25 23:58:58 UTC
From: k5doa@vvm.com
Topic: 4705 Message: 4705

Well in spite of the oppressive heat and the even worse band conditions, we will be holding field day this weekend. After all, field day is all about operating in adverse conditions. But it also about fellowship and some learning experiences. So I hope you can all make it out to our usual spot at the Early Day Tractor grounds in northwest Temple. We will be there from about 9AM on Saturday to about noon on Sunday with radios going from noon to about noon.

We will not be putting up the beam antennas this year, so the operating will be a low key affair. We hope to get some folks on the microphone that may have not felt comfortable operating in a more rigorous contest environment. It is still a contest of sorts, but a low key one with minimal antenna capabilities more likely to be what we would have in an emergency situation. Expect our score to be low. That's OK.

Plans have changed a little. Since we are not putting up the beams, we can wait until Saturday morning to put up the remaining antennas. We will start that about 9AM on Saturday. We will need a half dozen folks or so to get the antennas up before it gets too hot. Note that there will be no antenna party on Friday afternoon (whew!) like I had announced in the last club meeting. So pass the word via the grapevine (repeater, coffee, etc) in case someone was at the meeting that does not read this reflector. We don't want anyone showing up in the heat on Friday afternoon.

We will have our family oriented meal about 6:30 on Saturday. There will be brisket, beans, cole slaw and dessert. Feel free to bring other goodies such as a covered dish or salad if you are so inclined. Or just bring yourselves, that will be fine also.

We will also need help pulling down the antennas about 11AM on Sunday morning. By then the operators are worn out, so a little extra help then is greatly appreciated.

Come on out and join in. There will be fans and the heat is not so bad under the pavillion. See you there. 73 - Darwin

4706. Club 570 and Dale's Rig

Yahoo group: Temple_ARC
Date: 2009-06-26 23:23:48 UTC
From: k5doa@vvm.com
Topic: 4706 Message: 4706

Dale, we need to take you up on your offer to use your rig for FD SSB. We will probably have to use your hand mic rather than the Heil mics as we probably don't have the proper adapter. But the phones should work. The club TS-570 is down because the power cord is not in its box. I have never fired it up here, so I don't know when it might have gone missing. Perhaps at the last outing. As you know from this morning, the new power supply we thought was in the container was not. Perhaps it is with the power cord.

No big deal. It will be good to try your rig in a "contest" environment as it is one of the candidates we would look at.

I will be bringing my FT-450 for the CW station.

Will begin set up somewhere between 8 and 9 in the morning. Looks like we have all the dipole and mast stuff except for one T-post gone missing. I will bring another. I bought some new rope at Wally World this morning.

Food for tomorrow night seems to be in order. BBQ, beans, and cole slaw. If anyone wants potato salad, they need to pick some up at Sam's. But cordinate here or at the site to keep from double buying.

Clifford has a family emergency out of town and will not be able to make it.

CU all in the morning. 73 - Darwin

4710. Re: [TARC] Field Day this Weekend

Yahoo group: Temple_ARC
Date: 2009-06-29 15:59:39 UTC
From: Mike Sherrod
Topic: 4705 Message: 4710

Tom,

Thanks for you comments on Field Day. I was also there in the first hours of operation (from 11:30am to 4:00pm) and logged a few contacts with Dale and Don. Darwin was just pulling up with the Brisket when I had to leave and he is to be congratulated again for doing a heck of allot of work out there in the heat as were Myron, Ron, Dale and Don. I missed his meal because my health problems were getting to me and I had to leave. I had fun while there but what was very disappointing is that we had so few in attendance. I'm not sure what the answer is to getting members to participate on a more active basis in Field Day and other TARC events but I guess you really have to love HAM radio to re-arrange your schedules to fit in some time for this and other TARC-sponsored events. With a Radio Club with as many members as TARC has, there should have been more in attendance. The heat wasn't bad at all as long as you sat at one of the radio tables, had the fans on you (besides the nice breeze we had) and had plenty of iced down beverages to keep us all hydrated. As far as I was concerned, the heat was not an issue or an excuse not to be there this year. I wish I could have stayed longer but if an ole ailing cripple like me (who was almost a Silent Key twice in April) can come out and log a few contacts, I find it very hard to relate to all the other healthy club members who could not find it somewhere in their very busy weekend schedules to attend and to at least contribute an hour or two in the old log book for this club contest.

I agree with Tom (AE5AP) in thanking Darwin, Dale, Ron, Don and Myron and any I missed who were there before or after I was there for helping to set up the antennas and radios and keeping the drinks ice cold. Good work guys!! I enjoyed seeing and working with all of you once again.

Please count me in for next years Field Day. If my comments have offended any of the more "sensitive" members of the club, I do not apologize or care... just get off your whiney rear ends and start to be a radioman again.

I missed his meal because my health problems were getting to me and I had to leave. I had fun while there but what was very disappointing is that we had so few in attendance. I'm not sure what the answer is to getting members to participate on a more active basis in Field Day and other TARC events but I guess you really have to love HAM radio to re-arrange your schedules to fit in some time for this and other TARC-sponsored events. With a Radio Club with as many members as TARC has, there should have been more in attendance. The heat wasn't bad at all as long as you sat at one of the radio tables, had the fans on you (besides the nice breeze we had) and had plenty of iced down beverages to keep us all hydrated. As far as I was concerned, the heat was not an issue or an excuse not to be there this year. I wish I could have stayed longer but if an ole ailing cripple like me (who was almost a Silent Key twice in April) can come out and log a few contacts, I find it very hard to relate to all the other healthy club members who could not find it somewhere in their very busy weekend schedules to attend and to at least contribute an hour or two in the old log book for this club contest.

I agree with Tom (AE5AP) in thanking Darwin, Dale, Ron, Don and Myron and any I missed who were there before or after I was there for helping to set up the antennas and radios and keeping the drinks ice cold. Good work guys!! I enjoyed seeing and working with all of you once again.

Please count me in for next years Field Day. If my comments have offended any of the more "sensitive" members of the club, I do not apologize or care... just get off your whiney rear ends and start to be a radioman again.

Thanks Darwin for the weekend, your "home cooked" brisket was great!.
Thanks also to all who helped organize and participate in this years Field Day, Myron, Ron Don and Dale and anyone else. Sure was fun.

Just a quick comment about attendance, we had a low turn out in Cove, also. I think the heat was a concern for many. I was in attendance from 10am Sat until 10am Sun and that was tough because of the heat.

Hopefully next year will be cooler.

Tom,

Thanks for you comments on Field Day. I was also there in the first hours of operation (from 11:30am to 4:00pm) and logged a few contacts with Dale and Don. Darwin was just pulling up with the Brisket when I had to leave and he is to be congratulated again for doing a heck of allot of work out there in the heat as were Myron, Ron, Dale and Don. I missed his meal because my health problems were getting to me and I had to leave. I had fun while there but what was very disappointing is that we had so few in attendance. I'm not sure what the answer is to getting members to participate on a more active basis in Field Day and other TARC events but I guess you really have to love HAM radio to re-arrange your schedules to fit in some time for this and other TARC-sponsored events. 4716. Get Ready! The Belton 4th Parade

Yahoo group: Temple_ARC
Date: 2009-06-30 19:11:22 UTC
From: Tom Olsen
Topic: 4716 Message: 4716

TARC
Hope all are getting ready to have a Happy 4th!

Want to get the word out and hopefully get everyone geared up for assisting at the annual Belton 4th of July Parade! As most of us know, this is fun way to start the holiday and with any luck we can be out of there before it gets too hot.
We usually gather at about 7am to get ourselves organized and then assist in parade lineup and getting each float in the right place prior to the "go". We also spend time directing the "lost" to their correct parade lineup area.

We will be using our HTs and the Belton TARC repeater. If anyone wants to help out and doesn't have a HT, that shouldn't be a problem, there will be extras available for you to use.

This is a little getcha goin' type email. Darwin, who had been attending the organizational meetings, will have a lot more information at Thursday's Club Meeting.

Happy 4th and Hope to see you there.

Tom,

I plan on helping this year if I am physically able. I like to try to alternate between being a radioman one year and riding on our Marine Corps League float the next. It is radioman's turn this year. Need a water boy to make sure that our volunteers with the radios stay hydrated? Then, I am your man.

> I am in the process of moving. One of the many things I remember about Charlie was that he was very generous. He would often "sell" items for little or nothing. I think it was his way of promoting the hobbie maybe. Anyway, I have a 14 element circularly polarized beam that I used for working the OSCAR satellite. In fact my first contact on OSCAR 10 satellite was with my satellite mentor, Charlie. This is the two meter 14 C by KLM. I also have a two meter ground plane antenna as well as two commercial 3 element beam VHF antenna's like the ones that you used to see on the police towers. I will give these to whom ever calls me first, in the memory of Charlie and his kind, generous ways. They are located in Harker Heights. My cell is 254-702-7986.

4728. July 4th Parade

Yahoo group: Temple_ARC
Date: 2009-07-03 22:50:46 UTC
From: k5doa@vvm.com
Topic: 4728 Message: 4728

Our participation in the line up process for the Belton July 4th parade is coming up tomorrow morning.

We will plan on meeting at the parking lot at the corner of 9th and Pearl at 7:45 on Saturday morning. Enter Mary Hardin Baylor through the main gate on 10th from 317 and turn left on Pearl at the next intersection. Then turn right on 9th and enter the lot. If you should be late, and the city has already closed 317 through town, it will be necessary to enter the campus from the west side off loop 121. However, they have indicated that will be delaying the street closings until well after 8:00, so that should not be a problem.

The schedule according to Jason is to pick up the golf carts (4) at 7:45 and have the briefing at 8:00 prior to going out on the line up.

Jason Morgan will be our coordinator again this year. So we will have the usual set of printouts showing where things go. He will have the maps like last year showing the approximate locations of the numbered slots. There do not seem to be any new wrinkles in the parade this year. Line up will be along the same two paths as last year.

We will plan on using the N5DJJ Belton repeater as usual. The frequency is 147.3/147.9 with a 88.5 tone. It has worked great for us in the past. Hand helds is the order of the day, as all the activity will be on foot or in carts.

There should be plenty of water available.

Be sure to bring some strong sun block and a big hat.

Thanks to all who have indicated they can help. We can always use more help. This is a good event that exercises our communications capabilities. If you are a new ham, this is a good event to get involved with. Even if you have not purchased a radio yet, we can pair you up with a buddy on the line up team.

The parade starts from 10th and 317 at 10 o'clock. If past experience is a clue, we should be done between 11 and 11:30.

Thanks for helping out. CU there. 73 - Darwin K5DOA

Ham Radio Spoken Here.....NU5D
Nickel Under Five Dollars

4732. RACES / ARES what are they

Yahoo group: Temple_ARC
Date: 2009-07-06 15:38:52 UTC
From: Mike Hankins
Topic: 4728 Message: 4732

I thought I was share the messages below from the Texas RACES (Radio Amateur Civil Emergency Services) Yahoo group. This time only.
TX RACES is a group sponsored by the State of Texas State Operations Center through the Departement of Public Safety. ARES (Amateur Radio Emergency Services) is a function of ARRL and each group has a sponsor, such as the Red Cross, Salvation Army, and so on.

I have found that many HAMs new & old are confused which is which and why they exist. There is a lot of inforamtion on both on the internet, yet many people still do not have an internet connection at home and seem disinterested in learning how to use it at the library or one of the senior centers where access if free and there are many who are willing to demonstrate how to use the computers.

What is very important is for each individual to learn what they are doing before or after joining any group.

Hope you enjoyed the 4th of July holiday ! I did.
Mike ki5m

From: Bill Rimmer TexasRACES@yahoogroups.com
What I would suggest is become a member of both organizations (ARES/RACES). Some served agencies require to be RACES (for the pundits out there, please note I said some). Most likely because the background check has been done and they do not have to worry about it.

Personally, I'm a member of both organizations. ARES is changing and some may not like it but it is what it is. Our served agencies dictate what requirements they require, not the ARES leadership. We have to adhere/respect their requirements. Some may want only ICS-100 but others may require ICS-100, 200, 700, 800 and/or RACES. A good example of this is Harris County Office of Emergency Management. RACES membership is required to operate an event from this location along with the ICS training. This is exactly why we strongly suggest ARES members become RACES AND take the ICS courses. The courses are free on the internet. One can have all four completed over a long weekend.

Now, what I get tired of hearing is the RACES vs. ARES or vice versa argument. As far as I'm concerned, there is no argument. If one does not like ARES and/or RACES, that is their issue. We need to come across as a cohesive group that knows what they are doing to get the job done. Just because one has a radio does not make them a proficient communicator. We all need training, training and training.

As for chastising or calling someone ignorant because one asked a question, that person should be banned from the group. That is unprofessional, rude and there is no room for that kind of behavior in RACES and ARES.

So, join both organizations and have fun.

To: TexasRACES@yahoogroups.com
Subject: [TexasRACES] Relationships with other groups

I have been a HAM licensed operator for only 2 years now. Over this time I have been very surprised at how many do not know what RACES is or does or why it exists. I have read statements of "Do you really think RACES will do anything?" on e-mails and news groups, and then later told after replying that I am ignorant because I have not been an active HAM operator as long as the person who wrote the message.

RACES is only activated when needed. ARES groups (which the person seems to be running (although I do not know if they are all registered with ARRL)do not all know the difference of RACES and ARES.

For those who do not have an internet connection, don't have the ability to search for information. I understand that quite well. Those who do have internet access (available now from almost every public library, senior center, etc) can download the RACES information to include ARRL stating the difference, and can ask a member or get a copy of the latest RACES guideline (Standard Operations Proceedure).

It seems as if the larger cities don't have this problem and are very co-ordinated and trained (So I presume from reading their information on the internet & Club news).

I myself, with very fast internet, and as a new amateur radio operator have spent many evenings searching and downloading answers to my own questions to include many FEMA courses, ARES information, National Traffic System info, emergency operations center SOPs,later finding out about Yahoo groups available, and such. People with dial-up do state that it runs too slow to do this and sometimes that they live in the country as an excuse. Let them know what is available, what the difference is, and answer their questions so they don't walk around with comments that are incorrect due to their own mis-comprehension of the various subjects. Be an Elmer.

From: Mark Aponte
Topic: 4738 Message: 4738

Hello to everyone! Just a quick reminder that Saturday, July 17 at around 9am, many hams will be meeting at the El Rodeo restaurant in Lampasas. If you're taking 190 from Killeen, El Rodeo will be on your right before you reach Key Ave in Lampasas.

We try to get together on the third Saturday of every month in Lampasas. The Lampasas repeater is 147.22 with a (+) offset and a PL tone of 88.5.

4739. Stephenville Experience

Yahoo group: Temple_ARC
Date: 2009-07-18 17:01:37 UTC
From: Carolyn Cheney
Topic: 4739 Message: 4739

Stephenville Experience

While on a trip to my Mother-In-Laws in Stephenville I needed directions to a local tractor supply company. I jumped on their 147.360 repeater and asked for help. Larry, K5WLF, came back with the information I needed.

He also INVITED ME TO HIS CLUB MEETING! That is the point. He was helping and PROMOTING HIS CLUB AND COMMUNITY! He told me the Tarleton Area ARC meets at the college the first Tuesday at 7PM and offered to talk me in on the repeater when I came to visit. He also made me feel WELCOME to his area.

How often do we hear a traveling Ham hit the repeater and announce that he is mobile and monitoring and we simply ignore him?

What the Ham is really saying is this, "Hey, I'm hear and I'd love to talk to someone from the area and maybe be made to feel welcome."

We can do a lot to promote TSGARC, our community and Ham Hospitality in general, by responding to those passing Hams. Who knows, they just might want to come to a meeting, share something about another club that we could network with, or maybe, just maybe, become our newest best friend on the airwaves.

I am planning on going to the meeting Larry invited me to. I might just get there early and buy him a cup of coffee. While I am there I will share about my friends in the TSGARC and maybe, just maybe, we can get together someday for a joint club activity.

I just wanted to share this experience so we might all think about reaching out to others and not just limiting our QSOs on the local repeaters to locals.

Do your part to promote your club and you will benefit greatly!

73 & Blessings,
Steve KD5PIV

GLA Systems & K5BUG Retiring

Effective October 31, 2009 GLA Systems will cease to manufacture the Texas BugCatcher Antenna. It has been a fun 30 years but it is time to hang it up.

I would like to thank everyone that has made this experience possible.

I have made many friends (maybe an enemy or two) but overall it has been a great

trip down a long road.

All orders received before October 31, 2009 will be filled. Effective November 1, 2009 only orders for items that may be in stock at the time will be accepted.

Also effective December 31, 2009 the 1-800-588-2841 toll free line will be discontinued.

73 and Happy Hamming to all

Good luck and best wishes.

Henry, K5BUG & Tina Allen

Buying FD radios is one of the few ways it makes sense to spend the treasury down. Although it's pretty unlikely any more than a handful of folks will show up to actually operate them, we could also have a club program ahead of time to show folks how they work, and some members might come to the program. That would be one less club program to fill, and the purpose of FD is to encourage emergency radio operation, not just emergency BBQ purchasing for the folks who happen to show for an hour or two around supper time. If we move FD to someplace "more public" where the antennas will perform much worse, it really wouldn't matter which radios were purchased since nothing would work very well anyway, but I gthink right now ICOM and TenTec make the most solid and "best" radios, but TenTec, although American made, will cost more than those made in China by ICOM. Just my thoughts.

There is a IC-718 on QTH.com for $495.

73 Terry - AB5K

RADIOHF - ICOM IC-718 with DSP Card ....!

I have like NEW, and less than one year old a IC-718 HF radio with the optional UT-106 Digital Signal Processing Moduel. The radio has been Mod. for the MARS Hz. by a Icom Tech... The radio was used part time as a QRP and Digital Com. It's small and very portable and carries a big punch...!This radio is very easy to use... I have also installed the optional handle to make the radio more portable and safe to move. I paid a total of $688 for all the gear and the MARS Mod. I am asking ONLY $495 plus a little help on the delivery. I have up graded this radio to a IC-756 pro III, that's why I'm selling this like NEW Radio.It come complete with all the factory parts receive from Icom, and I have the orginal icom radio box and manual. I have photos if needed via email. Any Question Please call K6QFO, We are in the San Jose area....Thank you for looking and 73' Mike

Wish I could. I am responsible for the Bell County 911 Center radio system - can't get very far away. TARC has been muddling around for the last few years with charging for outside tailgate sales and admission prices. Our costs increase yearly but a few folks are dead set on maintaining $3 for the gate (really nice for folks having to make change). Also when we want to make a contribution to the ARRL, well we will be a little short during the fest, and the most famous, it's too close to fest time to change the admission.

I just wanted to present a few snapshots of what other fests are doing.

I am on the BOD of the Hamarama that you featured . We have had many discussions about out door vending . I personally do not shop the outside space at Belton when the building is not sold out. I suppose that gives away my position. The sponsors of each of these events, whither it be a diverse group such as ours or a club as in your case , spend a considerable amount of time often personal expense just to plan and prepare for the show. The lest the rest can do is pay he price to come in. Once the building is sold out which insures the longivity of the sale more power to the tailgater outside. Our Ham Fest is unique in the consideration of kids participation. Seldom does a kid leave without one or more door prizes. The Annual Scholarship award supported by the drawing for the most part is another. This award is generally awarded to someone you know's kid or grand kid. You can at least bet that someone you know knows that family. It's not large , but it wil buy a few books or more. Again the ladies get special attention and I doubt may have ever left without a door prize. In the case of the TARC and Belton it would be hard to chnge . I know many that only come on Friday. When I first became a Ham the sales were Sat and then wrap up Sunday. Sunday was my only chance as I had a large family to support and was involved in retail sales. Times have changed , many of us have had our resposibilitiys grow up and move on and retirment has made Friday a much better show day than Sunday. It would be very hard to ticket your outside participants. Just thinking out loud Chuck Wq5B

I did an analysis of Steve's log. Here are a few things. First, QSO's per country (remember, all by callsign routing, no reflectors used):

CNTRY QSOs
JAPAN 50
USA.. 26
GERMA 15
ITALY 11
CANAD 10
AUSTR 9
ENGLA 7
SWITZ 3
PORTU 3
ARGEN 2
AUSTR 2
DENMA 2
GREEC 2
NETHE 2
ALASK 1
FRANC 1
NORWA 1
BRAZI 1
BELGI 1
SCOTL 1
SLOVE 1
SPAIN 1
HAWAI 1

QSO's by contest day:

DATE..... QSOs
07-25-2009 23
07-26-2009 15
07-27-2009 21
07-28-2009 24
07-29-2009 5
07-30-2009 31
07-31-2009 34

Callsigns worked:

7J3AOZ 7K1NCP AA4RC AA5RT AD5NR AD5RS AD5XQ CT2JPJ CT2JSS CT2JTR DF1ND DG8NGN DG9YBN DK1DD DK4BA DL1YBL DL2FDL DL2MT DL4AH DL7GEM DL8IU DL9MB DL9RAR DM8AH DO2FDL EA3CNO F4DIA G4HHX G4ICM G4UUI GEOJZ GM0MRJ HB3YNV HB9TRT HB9VAF HK6CAN/W8 I3ZNI IK0SME IK2MLS IQ3DQ IY3NTL IZ0/DF6RK IZ3ATU IZ3CYW IZ3IGJ IZ3LKZ IZ7OIX JA1DDF JA1QAI JA3ASU JA3KKE JA3PTR JA3SQI JA3YUA JA4NYY JA7NJN JA8EUT JA8LWU JE1MPR JE4QMK/1 JE4YJG JE7YWW JF1CXH JF1EGX JF1TEU JF1TWZ JF2DFJ JG1DMS JH1ARY JH1KME JH1MUW JH2DFJ JH2QUE JH3HWL JH6ZKR JI1BQW JI2ZYH JI3OYM JJ0NNU JJ3OFL JK1PBD JL3YKZ JL3YRP JN2UNC JO3SLK JO7CVU JP3KPJ JQ1YLI JQ1YOL JQ2SDE JR1YJR JR2MRS JR5YAP JR8YKT K2DXU K4RBM K5SGL KB2WF KC2JPP KD8GIK KE5C KH6MEI KJ4VO KL0RG KV5E LA1RCA LU8AJ LU9DL M0DOL M0NNH M3PPU N0XIA N5MIJ N5NIR N5SKE N9JA N9QE OE1MCU OE5KPN ON4BK OZ1IOM OZ8BLR PA2JM PA3CXB PY2JF S52X SW1GZL SY1ICOM VA2RN VE2SE VE3EI VE3FLK VE3XZT VE6DDE VE6JKV VE6KUV VE7IO VE7SUN VK2AH VK3COM VK3KTM VK3MJF VK3NQS VK4TUX VK5PBZ VK8HF VK8ZMX W2GSS W5DUK WD5ERD WD8KNL WR9A WW6USA

How do you suppose they survive: http://www.hangingjudgehamfest.com/ - charging a whopping $8.00 to get in the door ? Probably those folks in Fort Smith have a 'secret weapon' ?

Funny how a ham will pay $40 to fill up with a tank of gas, stay in a $50 motel and buy $10 in meals and complain about $3 to get in the door. Something is really wrong with this picture. de nu5d

Topic: 4772 Message: 4772

*http://www.houstonhamfest.org/

Welcome to the Greater Houston HamFest home page. The Greater Houston HamFest is the fastest growing hamfest inTexas with an estimated 1000+ attendees expected. This is the eighth year of the Fest, which began in 2002 at the Sugar Land Community Center as the Brazos Valley Radio Club Mix 'n Match HamFest. The hamfest has grown each year and the venue was moved two years ago to the Fort Bend County Fairgrounds to provide more room. *
*/

$40 for gas? I pay $65 or more! hi hi

All the more reason to support the one in Belton, right? Personally, I have no problem with a $5 cover. These events aren't cheap and is run by volunteers, right?

Thanks Charles. I noticed he was in the database as a life member, but no callsign was listed. W5FOE expired two years ago, and the last address was different from what we have for him, but I'll keep sending the bulletin until it starts bouncing I guess.

Just so everyone can be clear (including me!)...

.
http://hotarc.org/images/sandra-magnus-t.jpgHOTARC
has the
privilege of hosting *NASA Astronaut Dr. Sandra
Magnus* as a special
guest speaker in Waco on *Tuesday, September 15,
7:00 PM*, in the
auditorium of the John B. Connally Technology
Center of the TSTC campus.
(Bravo!! Wayne KD5SMC, for making this happen!)

· Our VE Testing has been moved up to the
third Saturday this
month, *September 19*.

· We will have our September Meeting of
Members on the usual
fourth Thursday, *September 24.*

· The Waco Wild West Century Bike Ride
will be Saturday,
September 26.

You can see that this is a busy month! Check the
weekly nets, your
email, our web site's News page
<http://hotarc.org/news.html>, and/or
the HOTLINE <http://hotarc.org/hotline.html> to
stay abreast of
late-breaking developments.

All TARC members,

Do you have your VE certification? Then Ham Expo needs you. We want to offer a VE test session during Ham Expo October 3rd. Testing time would probably be at 1:00 P.M. Location would either be a conference room at the Expo center or possibly the Bell County EOC or Belton police department.

At Thursdays club meeting three members volunteered but we are still in need of a coordinator.

Please consider helping provide this service to the attendees of Ham Expo.

For Information, we need a liason person to manage the session. This person must be an Extra class ham and a qualified VE. He/She will order materials, verify all paperwork and return all materials after the session, therefore this person should be someone who is not already loaded with HamExpo duties.
Step Up and help the club and amateur radio in general.
Thanks

Why doesn't TARC invite Mr. Noland to a club meeting to give a presentation on their setup, plans, needs, why the folks who set up the radios in the first place can't do this, etc? This is the first I've heard as a TARC member about any of this...

I realize this is going to help Kay out, but I can't help hurting a little with Charlie's loss, and seeing his rigs going up for sale.
Hugs to Kay.

4808. LITTLE TARHILL ANTENNA

Yahoo group: Temple_ARC
Date: 2009-10-05 05:08:18 UTC
From: RONALD W. THOMPSON
Topic: 4808 Message: 4808

Yesterday at the swap fest I purchased a Little Tar Heel antenna so thought I would send a brief report on it. Today I mounted it on my Beetle convertible and tuned in on freqs from 6 meters to below the 75 meter band. The antenna appears to do everything it is advertised to do. It tunes very smoothly and does not pick up any noise from it's motor in the radio. So far I have not detected any problems with it.

4809. Re: [TARC] LITTLE TARHILL ANTENNA

The little screwdrivers are OK until you look at their efficiency
particularly on 75 and 40 M....It's scary.

Thanks Steve...

I just monitored the local D-Star freq. and really enjoyed listening the D-Star Patch between St. Mary's School here in Temple and the St. Mary's Catholic Primary School located in Deal, Kent, United Kingdom. and with Amateur Radio Operators on both sides of the "Pond". What a treat to hear the Question and Answer session with the kids learning about each other and their homelands.

Hats off to Steve Bosshard, Steve Stickley, Hal Pagel and Paul Molina and Matt in the UK and any others that I may have accidentally left out. Sorry I couldn't make it myself but you all did a great job...

A BIG thank you to Hal Pagel, Steve Stickley, Paul Molina and Mike Sherrod for making this project possible. It only takes a few minutes to set up a very functional interference free DSTAR station with all digital clarity and make international contacts.

This really beats trying to string wires between trees and listen to crackle and static and the kids really like being able to have contacts with distant stations.

4823. New TARC Officers ?

Yahoo group: Temple_ARC
Date: 2009-10-21 18:24:51 UTC
From: Steve S. Bosshard (NU5D)
Topic: 4823 Message: 4823

Has the nominating committee for club officers been selected ? I missed seeing the selection results in the board minutes.

Steve

Nominations

5.02 Nominations Committee

1. The President shall appoint three members to the Committee, only one of which is a member of the board, for the purpose of investigating, and determining qualifications, and, thereby selecting a nominee for each elective office who, in their opinion, will best serve as officials of TARC during the coming year. The committee will select at least one nominee for each elective office.
2. The Committee will be appointed not later than the August TARC meeting each year, and will place their nominees on the ballot when nominations are made. The committee?s list of nominees will be published in the club?s October newsletter in the form of a ballot.

(5.19 If the President is absent or unable to act, the Vice-President will perform the duties of President, and when so acting, will have the powers of and be subject to the restrictions of President. The Vice-president will perform other duties as assigned by the President or the Board of Directors. If the office of President becomes vacant, the Vice-President will assume that office and its duties.)

> someone yelled to me that I was going to be the next treasure.

Hi-hi -:)

Mike, I agree with Steve, you are a definite treasure, but I hope this means you will also be TARC's next treasurer! -:)

> Has the nominating committee for club officers been selected? I missed seeing the selection results in the board minutes.

> "If the President is absent or unable to act, the Vice-President will perform the duties of President, and when so acting, will have the powers of and be subject to the restrictions of President. The Vice-president will perform other duties as assigned by the President or the Board of Directors. If the office of President becomes vacant, the Vice-President will assume that office and its duties."

I have a few comments about TARC and it's officers having been a Director and having had the absolute worst job possible - chair of the nominating committee. The bylaws were clearly not followed this year, but in a way, so what? Getting qualified folks to agree to be officers is an almost impossible task, and certainly a thankless one.

Due to the current president's illness, TARC has been defacto without a president much of the year, especially lately. I hope he gets to feeling better soon, but I also hope he resigns offically before year's end unless he is certain his health will allow him to attend and actively participate in the club's governance as the eighth board member, the past-president, for 2010. Otherwise the board will be short a functional member, and there is no bylaw mechanism for replacing the immediate past-president on the board. If he resigns before year's end, the vice-president will ascend to president and become the eighth board member next year. We ought to at least make a reasonable effort to follow the bylaws whenever possible.

The slate is supposed to be set at the October meeting - that is actually when additional nominations are supposed to occur. That way, the ballot can be published in the bulletin for folks to absentee vote. I can't honestly remember when that has been done. Usually write-ins are taken at the November meeting which deprives those not in attendance from voting for/against a full slate. On the other hand, if it's that important to a member to know all the slate and vote, let him/her show up at the November meeting (and some other meetings and activites too). Right now, IMHO we have a very reasonable slate even if the selection process was a little flawed. If you aren't on the slate and want to serve, show up at the November meeting and offer yourself.

It was much easier for the nominating committee when the club had over 125 members instead of the 50 or so we now have. I was the board member present on the nominating committee along with Jan Gregg and Vern Starnes in 2004 I believe. We met several times at Starbucks South and came up with a good slate of folks willing to serve.

The $64,000 question is how to grow the club. I tried to increase club revenues by raising our gate at Expo and our ability to fund scholarships and ARRL contributions, as well as upgrade our field day stations to more user friendly and modern rigs. Most time when we tried to use our resources, the objection was that we needed cash available to run the fest or lets re-visit this after the fest.

These things did not happen. Likewise embracing new technologies like Charles Brain G4GUO's digital voice used in the AOR DV system and Icom's DSTAR systems have been set aside for more aged and simpler technologies. Actually Charlie N5TD was the proponent behind an all digital repeater. He was torn between P25 (a dead end (for amateur radio) public safety protocol), and DSTAR, an all digital protocol developed by hams for hams. Of the two, P25 is by far the more robust technology. I sealed the deal by buying and installing the first DSTAR repeater system in Central Texas. Bruceville, Waco, Walburg, Killeen and Austin were soon to follow. (Will TARC ever have a DSTAR system)?

With so many hams using the internet (as we are right now) DSTAR is a natural integration of all digital voice and data with worldwide nearly instant communications without the hiss and crackle and loudness variations you hear on FM. During the last year or so, our DSTAR group was able to host several seminars on DSTAR and set up classroom demonstrations at Tarver Elementary, Buckholts, the Temple Education Center Charter School and most recently a Classroom to Classroom live chat session between St Mary's Schools in Deal, Kent, UK. and Temple Texas, US. The kids (maybe some future hams) really enjoyed clear communications with other kids across the Atlantic.

I do hope folks will be willing to serve and help return TARC to being a progressive organization that attracts and retains members.

73, Steve NU5D
Director, Past President, etc.

4827. Nominating Committee

Yahoo group: Temple_ARC
Date: 2009-10-22 10:41:04 UTC
From: ke5nnu
Topic: 4827 Message: 4827

The last called Board meeting took place on August 27,2009.At that time the president stated that he had a club member in mind to head up the Nominating Committee.The Board has not met since that date. Minutes of the August 27th Board Meeting were posted on the Reflector. There are no Board meeting Minutes since that date. I am not aware of any Committee being formed or any slate of candidates.

Following the October 1,2009 Club meeting Vice President Frankie Baugh met with Board members present to attempt to come up with a list of prospective officers for the November election.These names were posted in The Tarc Club Minutes for that day.Since this was not the action of a duly appointed Nominating Committee, I can only assume this to be a prospective list. Although my name appears on the list for another year as Secretary, I will not a canditate.

I have been an avid fan of TARC for almost 20 years. I am too far away to enjoy many of the benefits others may have by being in or close to Temple, but I have always found the help or information I was looking for from someone there. I understand there have been a problem or two over the years, but that happens unfortunately. The good thing is, TARC has survived. I am in a couple of other organizations, one being Worldwide, and those membership numbers are down as well. I think many think they don't have time, when in reality they don't make time for these groups anymore. It is so much easier to sit here at a keyboard and type or read, than to get out when it is hot or cold and go meet with some friends, or to make new ones. I take partial responsibility for that since it seems my generation allowed it to happen. Instead of getting other out, we usually jumped up, and did a lot of ourself. We also got lazy, and our kids saw this... I don't know what it will take to get folks involved again in any of these organizations, but we need it every where. I guess one of the things I can do, is to at least check in to the Net again. I used to do that religiously. I started with a Kenwood TH-205, and a homebrew 3 element beam at about 20 feet. That was a great time, and a good trip from Hearne. I bought more gear, became involved in Packet, and had a BLAST. Charlie was one who helped with some of it. I used to hear Steve NU5D talking with Dennis W5XO in the mornings as I was just hitting the sack. XO was one who got me going on a lot of stuff as well. At this time, I have a whole room of gear, and do a lot of neat stuff. I also have my XYL licensed as well. She is not as active as she was at first, so I must first make it work at home, and see if I can help make it work outside. I want to say Thank You again to the many Hams from the Temple Area, including Bell, Lampasas, and Coryell counties for ALL of the help I have received over the years, and hope to see many more years of all of us helping one another.

Hi John,

I think your comments are very sane. It is not easy to find folks willing to spend the time to serve as officers and work to make things better for TARC.

It looks like in lieu of a nominating committee the selection will be nominations from the floor and there is nothing wrong taking that approach.

Like your self I believe every effort needs to be made to follow the bylaws else it will be chaos. The bylaws do address provisions for succession when an officer is unable to serve and that is one of the reasons we have bylaws. It is also important to remember that the officers should be representing the wishes of the club as a whole and not just their personal wishes.

steve

It was really bothersome when the board decided TOO much money was being spent on refreshments at club meetings - I bought homemade Kolaches a few times (around $12 / dozen). Probably should have bought a jar of peanuts in stead.

I tried to get the board to buy new rigs for FD then offer them as give away prizes at Expo - the consensus of the board was that no one wants a used rig, even if its a drawing prize.

Thanks for asking my opinion. There is a way to have an election this year consistent with the bylaws. The proposal is close but not completely correct:

> Since there was no committee appointed in a timely manner it looks like
> nominations from the floor will the the order of the day, unless you want to
> change the bylaws.

If you look at ALL of the bylaws, nominations from the committe and from the floor have to be made at the "meeting at which nominations take place". Then a ballot with ALL nominations has to be published in the October bulletin, along with "a blank space for write in candidates". Thus, ALL nominations must be completed in time to be published in last month's bulletin. Hence it is clearly too late now to take nominatons from any committee or from the floor. The Board simply didn't get it done. Here are the relevant paragraphs:

"5.04 Upon nomination from the floor or upon presentation of the nomination by the Nominating Committee, all nominees for the offices of President and member of the Board of Directors, shall, during the Regular meeting at which nominations take place, publicly accept or decline the nomination, if present. Motions to close nominations shall not be accepted until all parties wishing to make nominations have been heard."
5.05 Upon completion of the nominations by the Nominations Committee, ballots will be prepared, listing the nominees for each office and with a blank space for write-in candidates. The ballots will be mailed to all members eligible to vote as part of the October newsletter."

Since no one can now be nominated, the remedy consistent with the bylaws is that everyone receives a ballot with only a blank space for a write-in candidate for each office. Then the process proceeds as usual. The only hitch is, who do the members write in, that is, who would agree to serve if they received a majority of write-in votes? I would suggest some mechanism for interested candidates (if there still are any, God bless them) to simply declare they would be willing to serve for a given office(s). First, they could email Mike and be listed in the November bulletin, second they could post their willingness to serve on the Temple_ARC Yahoo group, and third, a time could be made available at the November meeting for those willing to serve to declare that to the members in attendance before those members complete their ballots. This is not a perfect solution, maybe not even a great solution, but it is consistent with the bylaws. Hope this helps.

73 -- John

That is interesting and I believe correct. Practice has been for the committee to publish their recommendations, and then during the November meeting, nominations from the floor to be added to that list and the election to be completed. I don't recall nominations from the floor ever being published in advance along with the committee recommendations, but I believe you are correct, that both should be published in advance. With less than 2 weeks until elections, I don't know how much can be accomplished in advance.

It might be a good idea to have a list of members in good standing available to help qualify nominations, if you have such readily available.

That big ARRL press release was for the first (that does not mean there will be more) waiver well in advance of a test drill. For now it might be better planning to play by the rules than betting the FCC will bend the rules whenever requested. The FCC seldom does what the Amateur Service expects them to do...

In my opinion,

Recent clarification of long existing FCC rules has little to do with emergency communications and much to do with long established pecuniary interest rule to the extent amateur radio spectrum is protected from encroachment by commercial interests.

For example if I were to construct an amateur radio facility like a repeater station using amateur radio spectrum and then make it off limits for any purpose other than emergency communications I would effectively remove that spectrum from lawful amateur radio service use and I believe this is what the commission is trying to prevent.

Instead of trying to remove or alter the rules, perhaps the better solution would be to petition the FCC for rule making to expand permissible communications in the amateur radio service to include those communications now in question.

Hello,

Just reminding everybody that the NCTECH Hamfest in Azle, Texas is coming up November 14th at 404 Main Street. This facility is very nice with a lot of room to grow. This year we will have Austin Amateur Radio Supply coming for new radio sales. AARS is local here to Texas and is very well known and reputable in the Ham Radio community.

We have free outside tailgating spaces as well as inside tables for $10.00 each. Email me at WB5IDM@... or call 683-465-3568 to reserve tables.

Hope to see you there!

Paul

4844. Club Meeting - Election plus Hints and Kinks

Yahoo group: Temple_ARC
Date: 2009-11-04 00:54:55 UTC
From: k5doa@vvm.com
Topic: 4844 Message: 4844

Tired of seeing the same old faces giving the program each month? This is the time to do something about that. Following the election this week we will do our first "hints and kinks" program. This is your chance to contribute to the program.

For those who are not familiar, "hints and kinks" is a long running column in QST giving little short ideas about how to do things better. It gives little hints about shortcuts on the bench, in fabrication or in the field. So if you know a little trick about how to coil a rope, tie a knot, solder a connection, drill a hole, a new use for PVC or anything useful we can benefit from, then tell us about it. If you don't know a trick, it is a good time to look through the "hints and kinks" columns in old QST's for a good one to bring.

If you don't have a stack of old QST's laying around, but you are a ARRL member (aren't we all?) the you can access old columns in the QST archive section in the members only portion of www.arrl.org. They don't allow access to the columns after 2005, but there are plenty of tricks in the older issues. Now is the time to spend a bit of time in the archives - there is a huge amount of helpful information in it.

So bring us a "hint", or bring us a "kink", but nothing too kinky HI.

CU at the meeting. 73 - Darwin K5DOA

TARC has in years past offered scholarships to TC Students.

This helps one or possibly two people who are already students.

Service organizations like Rotary, the Temple Education Foundation and Dr. Harry Macey offer scholarships. Dr Macey and the TEF have scholarships for high school students who excel in their classroom performance.

A contribution to the ARRL helps the ENTIRE amateur radio community, not just one or two people.

(TARC is supposed to be an Amateur Radio Club ? with interests that differ from Altrusa, Rotary, Lions, Kiwanis, etc).

Something to think about.

4848. Electronic Books for Sale

Yahoo group: Temple_ARC
Date: 2009-11-05 19:57:12 UTC
From: Kay Schlieper
Topic: 4848 Message: 4848

Charlie, N5TD, had a large number of books covering many various aspects of electronics. If you feel you would be interested in becoming the new owner of any of these books, I will have them on display for sale, at a below bargain price this coming Saturday, Nov. 7th.

If interested they can be seen at our son's house. Carl's address is 814 Delaware Dr. in northwestern hills in Temple. This is just a few short blocks north of Airport Road. He lives across the street from Steve Bosshard, NU5D, if you know where he lives (you can look for his tower).

The books will be available beginning at 10:00am Saturday morning. If you have problems locating Carl's house you can call 254-421-5855 for direction. Any other questions, you can call me at 245-773-0608.

Thanks,
Kay, KB5DC

Topic: 4850 Message: 4850

With election of club officers apparently being postponed until December would there be time to try and follow the clubs bylaws in selecting a nominating committee and perhaps even announcing prospective candidates via the yahoo reflector and club bulletin ? Could the club annual party and the special election meeting be combined instead of having two separate meetings ? Just curious, Steve

Temple Amateur Radio Club

TARC Club Meeting

The Temple Amateur Radio Club (TARC) met on November 5, 2009 at the Western Hills Church of Christ, Temple, Texas.

21 members/guests attended the meeting.

President Cliff Williams KE5CTW opened the meeting at 1905 hrs.

Treasurer’s report was given by Dale Duke,W5DUK, Treasurer.

Review of the last Board Meeting minutes was presented by Al Howe, N5AWH, Secretary.

New Business:

Tonight was the scheduled night for elections for the coming year by accepting nominations from the floor. Due to the tragic situation taking place at Ft. Hood, some members were not able to attend. The Club membership, present at the meeting, voted to postpone the election and have a special called meeting on December 3, 2009, at the Western Hills Church of Christ at 1900 hrs for the express purpose of holding the election. No other business will be conducted at that time.

Reservations for the annual Christmas dinner set for December 5, 2009 at 1300hrs at the Wildflower Country Club must be received by 1700 hrs, Monday, November 30, 2009. Menu will be similar to last year’s buffet with a meat or fish entrée.

Myron will be looking for 11 volunteers to assist in this year’s downtown Christmas Parade. Since judging this year will take place during the parade in lieu of before the parade, look for some last minute arrivals.

Ron Thompson gave a brief report on the successful JOTA recently held in Killeen.

Educational:

Tonight’s program was a Hints and Kinks session patterned after the long running series in the QST magazine. Darwin brought in a grab bag full of items including chop sticks to probe for loose connections, cheap electric fence insulators to use on antennas, flexible LED light, step drills, and several other items. Members added to Darwin’s presentation.

Meeting was closed at 2030 hrs.

Albert “ Al” Howe, N5AWH

TARC Secretary -2009

Merri (KE5MNA) and I are moving out of state for work and to be closer to family. We are selling our property which is be perfect for a ham.

Our home comes with 9.82 acres, and no restrictions or HOA's and can be ag-exempted. This place is perfect for a ham station and antenna farm and is priced to sell as we need to move by December 15th. The city is Liberty Hill however we are closer to Andice and Florence.

If you are interested please email me direct at KC9FOZ @ hotmail.com or you can call me at 254-338-4675 and I will provide more information.

73's,
Tom Chapman

4861. Without spectrum the rest of ham radio really don't matter!

Yahoo group: Temple_ARC
Date: 2009-11-17 19:50:31 UTC
From: Steve S. Bosshard (NU5D)
Topic: 4861 Message: 4861

www.arrl.org/defense <http://www.arrl.org/defense>

Dear Valued Member and Friend,

Recently you received a letter from ARRL CEO Dave Sumner, K1ZZ sharing Spectrum Defense success stories that were made possible with the generous financial support of ARRL members. Dave?s letter told the story of ARRL?s efforts to regain use of the 40 meter band-and contributions over and above member dues were instrumental in making that happen.

As you know, there is always more work to be done. The vigilance that is a hallmark of ARRL?s tireless efforts to protect our spectrum depends on you for the financial support to keep our frequencies out of harm?s way. It is the constant monitoring and awareness of what is happening in Washington and around the world that yields success.

So whether you are working a 40 meter band with fewer commercial broadcasters, operating in the 144 and 420 MHz bands or keeping your eye on our progress to win the court challenge of the FCC?s flawed Broadband Over Power Line (BPL) rules, you know that ARRL is on task and working hard to ensure that we hang onto what we have. Not only must we defend our allocations against well-heeled backers of licensed services, we must also try to prevent the pollution of the radio spectrum by unlicensed devices. The fight goes on in Washington, Geneva, and around the globe ? and there?s no end in sight.

Your continued generosity is paramount. If you?ve already made your contribution recently by mail or on the web, thank you so much. If not I hope you?ll help us raise $310,000 before November 30 to ensure that ARRL can maintain its strong position on Amateur Radio issues. We are certain to face challenges in the future and with your commitment ARRL will be ready and willing to face them.

Thank you and 73,

Mary M. Hobart, K1MMH

Chief Development Officer

P.S. _Your contribution before November 30_ by mail, phone or on the web at www.arrl.org/defense <http://www.arrl.org/defense> will help us plan for the coming year. Your contribution is tax deductible to the extent allowed by law.

P.P.S. If you are age 70-1/2 or over, you may elect to make a contribution _directly_ from your IRA to ARRL _before December 31, 2009 _and benefit from tax advantages. _This may be your last opportunity

since the program expires in a few weeks._ Check with your financial advisor to determine if this option will benefit your position.

Mike, Not sure if you remember me. I was a club member several years ago.

Our Emergency management folks at the VA have purchased HAM equipment for use in case of an emergency. They are looking for employee operators.

My license is still active, but I have not operated in so long I'm not sure I could power a radio on. All our old operators. Tom Vanderveer, Mary Owens, Dave Burgess have moved on.

Do you know of any active TARC members who might be VA employees?

Appreciate your help,

Paul Malmin

This is basically what the QST Article and other post concerning waiver of the rules say.

PUBLIC NOTICE

Federal Communications Commission
445 12th St., S.W.
Washington, D.C. 20554

News Media Information: 202-418-0500

Internet: http://www.fcc.gov
TTY: 1-888-835-5322

DA 09-2259

Released: October 20, 2009

AMATEUR SERVICE COMMUNICATIONS DURING GOVERNMENT DISASTER DRILLS

Transmissions by amateur stations participating in government disaster drills must comply with all applicable amateur service rules. While the value of the amateur service to the public as a voluntary noncommercial communications service, particularly with respect to providing emergency communications, is one of the underlying principles of the amateur service,1 the amateur service is not an emergency radio service. Rather, it is a voluntary, non-commercial communication service authorized for the purpose of self-training, intercommunication and technical investigations carried out by licensed persons interested in radio technique solely with a personal aim and without pecuniary interest.2
State and local government public safety agencies occasionally conduct emergency preparedness or disaster drills that include amateur operations. Some entities, such as hospitals, emergency operations centers, and police, fire, and emergency medical service stations, have expressed interest in having their employees who are amateur station operators participate in these drills by transmitting messages on the entity?s behalf. The Commission?s Rules, however, specifically prohibit amateur stations from transmitting communications ?in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer.?3

Given the public interest in facilitating government-sponsored emergency preparedness and disaster drills, we take this opportunity to provide a clear process for requesting a waiver, and the information that we require in order to consider granting such a request.4 Waiver requests should be submitted to the Wireless Telecommunications Bureau by the government entity conducting the drill, and must provide the following information: (1) when and where the drill will take place; (2) identification of the amateur licensees expected to transmit amateur communications on behalf of their employers; (3) identification of the employers on whose behalf they will be transmitting; and (4) a brief description of the drill. We emphasize that the filing of a waiver request does not excuse compliance with the rules while that request is pending. The waiver must be requested prior to the drill, and employees may not transmit amateur communications on their employer?s behalf unless the waiver request has been granted.

In an actual emergency, the Commission?s Rules provide that an amateur station may use any means of radiocommunication at its disposal to provide essential communication needs in connection

1 See 47 C.F.R. ? 97.1(a). See also Recommendations of the Independent Panel Reviewing the Impact of Hurricane Katrina on Communications Networks, Order, EB Docket No. 06-119; WC Docket No. 06-63, 22 FCC Rcd 10541, 10576 ? 111 (2007) (noting that the amateur radio community played an important role in the aftermath of Hurricane Katrina and other disasters).

2 See 47 C.F.R. ? 97.3(a)(4).

4872. RE: [TARC] Mike KI5M's DA Post

Yahoo group: Temple_ARC
Date: 2009-11-26 02:47:43 UTC
From: Dale Duke
Topic: 4869 Message: 4872

Mike,
This is not a matter for congress. FCC has made their position clear and it is within the general consensus of the amateur community. The reasoning for this is to protect our spectrum from being usurped for commercial uses.

As a volunteer you, or any licensed amateur who is not employed by VA are eligible to operate radios to assist VA in an emergency (real or simulated). This rule only applies to amateurs who are employed by VA (or any other employer) operating radios on the amateur frequencies on behalf of or for the benefit of said employer.

I have a DVD of a recent webcast presented by the ARRL Atlantic Division, which explains it in detail. Perhaps we can present it as a program at the club early next year.

Thanks and 73

Dale - W5DUK

4873. FCC Doings.

Yahoo group: Temple_ARC
Date: 2009-11-26 13:04:17 UTC
From: Steve S. Bosshard (NU5D)
Topic: 4873 Message: 4873

The DA in Mike KI5M's post means the decision was rendered under Delegated Authority (DA) by an FCC staffer and not the full commission. After 30 days a ruling under delegated authority becomes final unless there is an error in the decision making process. This insures 'finality' in a decision where the commission cannot arbitrarily set aside a decision. The process below can be found at http://www.fcc.gov/rules.html .

The process begins with a petition to the FCC, then comments, then reply comments, etc.

The Rulemaking Process

Each time Congress enacts a law affecting telecommunications, the FCC develops rules to implement the law. The Commission takes various steps to develop these rules. Typically, these steps offer consumers an opportunity to submit both comments and reply comments to the FCC.

Are There Special Terms I Need to Know?

Yes. Knowing your "ABCs," or specifically, one?s NOIs, NPRMs, and R&Os is key to understanding the Commission?s decision-making process. Exactly what do these letters mean? Below is a guide to understanding the "alphabets" of the FCC.

*

/Notice of Inquiry (NOI):/ The Commission releases an NOI for the purpose of gathering information about a broad subject or as a means of generating ideas on a specific issue. NOIs are initiated either by the Commission or an outside request.

*

/Notice of Proposed Rulemaking (NPRM):/ After reviewing comments from the public, the FCC may issue a Notice of Proposed Rulemaking. An NPRM contains proposed changes to the Commission?s rules and seeks public comment on these proposals.

*

/Further Notice of Proposed Rulemaking (FNPRM):/ After reviewing your comments and the comments of others to the NPRM, the FCC may also choose to issue an FNPRM regarding specific issues raised in comments. The FNPRM provides an opportunity for you to comment further on a related or specific proposal.

*

/Report and Order (R&O):/ After considering comments to a Notice of Proposed Rulemaking (or Further Notice of Proposed Rulemaking), the FCC issues a Report and Order. The R&O may develop new rules, amend existing rules or make a decision not to do so. Summaries of the R&O are published in the /Federal Register/. The /Federal Register/ summary will tell you when a rule change will become effective.

Changes After the R&O

/Petition for Reconsideration:/ If you are not satisfied with the way an issue is resolved in the R&O, you can file a Petition for Reconsideration within 30 days from the date the R&O appears in the /Federal Register/.

/Memorandum Opinion and Order (MO&O):/ In response to the Petition for Reconsideration, the FCC may issue a Memorandum Opinion and Order (MO&O) or an Order on Reconsideration amending the new rules or stating that the rules will not be changed.

One minor point - real or simulated. In a 'real' emergency you may use radio for the prompt summoning of aid when life or property are in eminent danger - whether licensed/unlicensed/employee or unemployed.

Wishing all a Happy Thanksgiving and Hope for a Blessed Christmas.

4880. Temple Christmas Parade December 7th

Yahoo group: Temple_ARC
Date: 2009-11-29 03:04:53 UTC
From: myronmesecke
Topic: 4880 Message: 4880

Calling everyone that wants to help TARC do its usual fantastic job with staging the Temple Christmas parade.
Date is Monday December 7th. Staging starts at 3 P.M.
We will meet at 2:30 P.M. in the back parking lot of the Bell County Health department building located on 8th street between Barton and Calhoun avenues. It is the old elementary school building.

There are twelve locations that need to be manned. But a radio is mandatory for only six of these locations. If you don't have an HT you can still help. We will use 146.52 simplex.

If you do not have a safety vest I will have the TARC orange vests with me. Bring things like a flashlight, pen or pencil, clipboard.

Let me know if you can help.

Myron N5TFK

Date: 2009-11-30 03:12:39 UTC
From: Dale Duke
Topic: 4866 Message: 4882

TIME IS RUNNING SHORT
IF YOU ARE PLANING ON ATTENDING THE TARC LUNCHEON NEXT SATURDAY, YOU NEED TO SEND IN YOUR RESERVATION BY 5:00 PM MONDAY
IF YOU ARE NOT SURE I HAVE RECEIVED YOUR RESERVATION, SEND IT AGAIN. I WILL ONLY PUT YOU ON THE LIST ONCE.

DON'T WAIT UNTIL THURSDAY, IT WILL BE TOO LATE.

THANKS

4883. Parade line up meeting tonight

Yahoo group: Temple_ARC
Date: 2009-11-30 22:59:30 UTC
From: myronmesecke
Topic: 4883 Message: 4883

If anyone is interested in attending the line up meeting for the Temple Christmas parade it is tonight Monday Nov 30 at 6 P.M. at the Mayborn Center.
This is the meeting where all the parade entrants get their assignments and go over the rules. I will be attending and some other TARC members have attended in the past.
If the meeting is still going on at 7 P.M. can someone please announce the need for parade volunteers on the Monday night net?

Myron

Steve, this is Jeremy from the Railroad and Heritage Museum in Temple. I have a favor to ask of you.

Every third Saturday of the month, I coordinate an activity called Family Fun Day between 10 am and 2 pm. When the club attended the Family Fun Day activity last January, I discussed with Charlie the possibility of the club setting up a station for the December 19th Family Day and allowing children to talk to an unknown Santa at the North Pole. Of course, I never was able to finish the idea with him. Would this be possible? Would you be able to have someone at another location talking to the kids?

Please let me know of your thoughts as soon as possible.

Sincerely,
Jeremy Krauss

All,

I am in need of a volunteer to assist with a display and Ham station to support family day from 10AM to 2PM on Saturday 19 December. Ron W5WRE has said he can be there but needs someone to assist him. Literature for a display is available in the club storage building. Please let me know if you would be able to help out by Monday evening. I will let the museum POC know if TARC is able to support Thursday morning. Please Email me at jshobson@....

Thank you for your support.

4893. Temple Christmas parade

Yahoo group: Temple_ARC
Date: 2009-12-07 03:23:39 UTC
From: myronmesecke
Topic: 2900 Message: 4893

I've had a few members tell me they are going to work the parade but I could use some more help. Anyone who wants to help show up at 2:30 Monday afternoon, December 7th in the rear parking lot of the Bell county health department building. It is located on 8th street between Barton and Calhoun Avenues. it is the old Lanier elementary school. If you can't make it until later that is fine too. Staging starts at 3:00 but it shouldn't get busy until 4:00.
Parade is at 6:30.
Weather calls for a high of 50 degrees with mostly cloudy skies. Chance of rain goes up after the sun goes down but I don't expect rain until after the parade.
There are 6 locations in the staging area where a radio will be necessary. There are 8 traffic control locations around the staging area where a radio might be useful but is not necessary. These traffic control locations can likely be manned with your vehicle parked near the intersections so you can stay out of the cold between helping vehicles.
Any help will be appreciated.

Myron

Something for those in the spirit of Christmas....

Try to make a contact with my Friends in Bethlehem, PA.

I wanted to fly up to Bethlehem, PA this year to take part in the special event as I have in the past, but working to get the transition to Full HD everything comes first.

Ask if Bob Green, KE3AW is there, if so, them him Hello from Gerald N5ZXJ in Texas..

Info is below:

40th Yr. of WX3MAS "The Christmas City Station"

The Delaware Lehigh Amateur Radio Club special event branch, "The Christmas City Station", will be on the air December 12th and 13th from the club station with the call of WX3MAS. This is the 40th anniversary of WX3MAS. This our way of celebrating Christmas and wishing other hams around the world a "Merry Christmas" from the twin Christmas Cities of Nazareth and Bethlehem, PA.

WX3MAS will operate Saturday Dec. 12th, and Sunday Dec. 13th, from 0900 to 2100 EST on the following frequencies,

28.465

21.365

14.265

7.270

3.970

Certificate. DLARC WX3MAS

From: mikeandrea@sbcglobal.net
Topic: 4897 Message: 4897

I just read about this on another web group (amateur repairs) and want to share it.
I found myself that it is sometimes very hard to put a new connector on the end of a microphone cable.
This is one of the links that show a type of RJ-45 connector that can be used to pass the wires through before crimping:
http://www.platinumtools.com/support/pdfs/EZ-RJ45.pdf
They are referred to as EZ-RJ45

Topic: 4899 Message: 4899

FRIENDS AND FAMILY:

I will not have time to get the funeral information in our local paper before tomorrow so I am including the details of Mary Gene Davis's funeral in this email: The funeral will be a grave side service at the Hext, Texas cemetary at 2:00 PM, December 23, 2009. The Hext Texas Cemetery is located outside of Menard Texas. The online directions I found are to take 83 south when you leave Menard and then take #29 East toward Hext. The cemetery is 1 and half miles West of Hext, Texas so start looking for a caleche road approximately 1.5 miles before you get to Hext, turn north on this road and go a half mile to the cemetery. If you miss the road and find yourself in Hext,Texas turn around and go back West 1 and a half miles and turn north on the caleche road. If you need more detailed directions you can call the funeral home at 325-597-1977.

4911. New 2010 Severe Thunderstorm Hail Criterion

Yahoo group: Temple_ARC
Date: 2010-01-05 14:18:09 UTC
From: myronmesecke
Topic: 4911 Message: 4911

The minimum size hail criterion for severe thunderstorms changes from 3/4 inch (penny-size) to 1 inch (quarter-size) nationwide on January 5, 2010.

http://www.weather.gov/oneinchhail/

Even though it is hard to be thinking about Spring thunderstorms when it is so cold outside I wanted to pass on this change in case you haven't heard about it. And Bell county Skywarn is scheduled for March 6th. Last I heard the location was still being worked out but UMHB is the likely location.

4912. TARC January Meeting

Yahoo group: Temple_ARC
Date: 2010-01-05 23:51:11 UTC
From: John Hobson
Topic: 4912 Message: 4912

TARC Members,

Please make plans to attend the January TARC meeting. I will be going back to the meeting format I used when President in 2008, keep the business session short. After a break for refreshments and socializing we will have a program. Darwin, K5DOA has agreed to be our Program Chairman this year. I am looking forward to some interesting and informative presentations. Hopefully we can through in a couple of surprises this year.

For the January meeting we have one important item of business we need address and I would like as many members present as possible. Because of the Texas football game, I will keep the program short this month so those wanting to see the game can get home early. We will do a short "Hints & Kinks" for those unable to present theirs in November. If you have a new one, please share it with the other members. Darwin will also do a short discussion on programs and activities planning for 2010.

At the December Board meeting, we had a lengthy discussion on what we can do to make TARC more fun. I know attending a business meeting and doing the same thing every month is not very interesting. We came up with some ideas but we need your input on what you thing would be fun and interesting both for our meetings and outside activities. I want TARC meetings to be something you look forward to attending and not just a monthly commitment.

Happy New Year and see you on .82!

73,

John WD5BFS

President 2010

4913. 70 CM Frequencies

Hi Folks,

I am new to the 70 CM band. I recently put a dual-band Icom IC-821H on line with a Comet GP-9 Dual-Band Antenna.

I know there isn't a lot of UHF activity in the area, but...
Can anyone suggest a list of local Central Texas 70 CM repeaters with tones (or often-used Simplex frequencies) to assist me in programming the radio ??

Thanks in advance.

TARC Members,

Please make plans to attend the January TARC meeting. I will be going back to the meeting format I used when President in 2008, keep the business session short. After a break for refreshments and socializing we will have a program. Darwin , K5DOA has agreed to be our Program Chairman this year. I am looking forward to some interesting and informative presentations. Hopefully we can through in a couple of surprises this year.

For the January meeting we have one important item of business we need address and I would like as many members present as possible. Thank you very much, Ron. That was exactly what I was looking for. I have the TXVHF-FM Society Repeater Directory, but I was looking for a list of LOCAL active UHF machines to program into my radio. I'm in a wheelchair and don't drive any more so I was only interested in the local ones I might be able to reach from the base.

And thanks to those who sent URLs to lists. I will bookmark them for reference.

Best 73,
Pete

4924. G5RV works well

Yahoo group: Temple_ARC
Date: 2010-01-19 04:59:06 UTC
From: mikeandrea@sbcglobal.net
Topic: 4924 Message: 4924

Once we "Hams" get a general class or extra license we want to use the HF bands and wonder what to use for an antenna. If someone asked me I would tend to calculate the lenght according to the frequency and possibly get more detailed than necessary.

I have done this with some stranded house wire and it worked great but was only temporary as a test. Later on a visit to Austin my wife purchased a dipole for me knowing that when I entered the Austin amateur radio store I wanted to spend a little money, but not much.

I have an MFJ-1778 dipole known as a G5RV about 23 feet up.

My next thought was that it should be aligned for direction.
Well, I found that on a dipole this is not as important as I had expected.

I turned on my radio twice today with no tuner, and spoke to Jim in Honduras this afternoon on 20 meters, and to Jiri in Zanzibar just after 10PM this evening on 75 meters. Knowing that formerly I made great contacts in England I just wanted to share this with anyone looking for a low priced HF antenna that costs less than $50 tax included.

Sorry to hear that but In know JW was getting up in years. He was the first contact I made after getting my ticket back in 74. It was on the 146.880 repeater in Waco. I checked into his traffic net on several occasions and he always remembered being my first QSO.

Many times JW and Stan, K5UOR conducted the area weather net. This is partly why I bought and installed the first wide area repeater on the KCEN tower in 1981 and Mr. Casey operated the National Weather Service office in Waco.

JW pastored the Willow Grove Baptist Church and often would get someone to activate the TARC autopatch so he could call on members who were in Scott and White and make arrangements for a visit.

He cast a long shadow.

Update on Calvin Howerton N5GSL

Cal Howerton N5GSL was placed in Hospice care at Providence Hospital yesterday afternoon after being transferred from ICU. I wish we had better news but he had an apparent stroke compounded with pneumonia. He is in room 313. Visiting hours are between 8:00 am and 9:00 pm. If there are any changes in his condition we will notify everyone by email.

Calvin Howerton N5GSL - Silent Key

August 16, 1924 - February 19, 2010

Cal Howerton, N5GSL became silent key this morning at 12:30 a.m. Cal was that deep voice we always heard on the radio chatting with those wanting to just talk while traveling about. He loved the hobby and was licensed for a very long time. He will be missed by all that knew him.

We will send another email when funeral arrangements have been made.

Calvin Howerton N5GSL?- Silent Key

Thursday, February 18, 2010

Cal Howerton, N5GSL, became silent key Thursday night at 11:10 p.m.

Cal was that deep voice we always heard on the radio chatting with those wanting to just talk while traveling about.

He loved the hobby and was licensed for a very long time.

Cal was a military veteran who severed with honor in WWII.

He will be missed by all that knew him and Amateur Radio will miss him.

For information on funeral arrangements, click here.

4945. Bell County SKYWARN 2010

Yahoo group: Temple_ARC
Date: 2010-03-05 21:54:46 UTC
From: Joe Dorn, W5VEX
Topic: 4945 Message: 4945

I would like to invite all on this list to the Bell County SKYWARN session tomorrow, March 6th, at the Central Texas College in Killeen. Signs should be in place on the campus leading to the auditorium.

The meeting starts at 0800 with the basic session and other presentations in the morning. The advance session and additional sessions, including one on amateur radio, will be in the afternoon.

John Hobson has expressed a desire to have more interaction between the amateur radio groups in the area and to that end I have included TARC as a co-sponsor in the amateur radio presentation.

This should be an active severe weather season after about a three year lull and we might need to call on more spotters than usual. The SKYWARN sessions will be a great step toward being an effective spotter.

I would also like to encourage TARC members to join in on the weather net sessions on the 147.140, Pl 123 during severe weather events. The National Weather Service in Fort Worth is normally connected via EchoLink during major events...

Joe Dorn, W5VEX

4946. License Classes

Yahoo group: Temple_ARC
Date: 2010-03-11 15:07:18 UTC
From: k5doa@vvm.com
Topic: 4946 Message: 4946

Just a reminder that Mike Hankins and I will be teaching the technician radio class beginning next week.

It will be held on Tuesdays and Thursdays from 7 to 9 PM at the Western Hills Church of Christ starting on Tuesday March 16 and ending on Tuesday April 13. We will not have a class on April 1 as that is the club meeting. If progress is good and we feel all are ready for the test, we will cut off some of the last sessions.

The Western Hills Church of Christ is located on the northwest corner of Highway 53 (Adams street) and Interstate 35 in Temple.

The book is "The ARRL Ham Radio License Manual". We will have copies available for sale at $20 which is about $5 off the cover price.

At this time we do not have enough students for the general or extra classes. But if you are interested or know someone who is let us know anyway so we can see what we can do.

If you know someone who is interested in the classes please have them contact me at K5doa@... on 254-487-3167.

Thanks - CU there - Darwin K5DOA

As of right now it looks like my work schedule would let me get to Temple from Fort Hood in time for the class. If the General class doesn't make I might take the technician class anyway. I could use the refresher.

Thanks

4952. Austin repeater.940 will require tone as of Apr 1st

Yahoo group: Temple_ARC
Date: 2010-03-15 03:40:45 UTC
From: mikeandrea@sbcglobal.net
Topic: 4952 Message: 4952

Not sure how many in our area use the Austin repeater, 146.940
but I talk to them sometimes in the mornings and when I drive to Bryan, TX (and joined their club to support the repeater use).
Passing on the message below. MiKe >Ki5M

The Austin Amateur Radio Club has announced that the 146.940 repeater
will require a 107.2hz CTCSS (PL) tone to engage the repeater
beginning April 1, 2010. The AARC repeater is currently the last
146.940 carrier squelch repeater in Texas.

The repeater will also transmit a 107.2hz CTCSS (PL) tone for users
wishing to use the tone squelch feature in their radios which allows
them to hear only the Austin repeater.

This change has been long in coming and in addition to a new controler are the final steps in an upgrade of the repeater system that includes a new Midland Basetech III repeater capable of analog and P-25 digital communications.

For additional information about AARC please see our website
www.austinhams. org .

Please pass this along.

4956. Greetings From Colorado

Yahoo group: Temple_ARC
Date: 2010-04-10 16:59:04 UTC
From: N5MDV
Topic: 4956 Message: 4956

Hi Everyone,

Well it's been a while since I heard from any of you. I moved alittle ways from my last addressa whole 15 miles...hihi..now live in Brighton Co. and I am working at Denver International Airport for SkyWest Airlines! My landloard decided to let my townhouse I was renting in Denver to go into forclosure so I had no choice but to move.
I am now set up on HF I am active in Winmore Hf.. I am on 7.078 or 7.077 usually every day. If you have a Winmore server in Temple you can contact me at: n5mdv@... or n5mdvcolorado@..., or by Peer to Peer Transmission if you catch me on frequency.
I am still active in the USAF MARS program here in Colorado and enjoying the Hobby.
I hope all of you I know are well,Mike,Steve,and many others who I have know over the last 22 yrs. and to those who I do not know Hello, Hope to here from you guys..!

73's Frank N5MDV.

4957. Fest Weekend

Yahoo group: Temple_ARC
Date: 2010-04-16 00:58:16 UTC
From: k5doa@vvm.com
Topic: 4957 Message: 4957

Well it is nearly upon us. Please come to help if you can.

I will need a two or three folks tomorrow (Friday) from noon to 2PM to help label the tables. Don Perry has already indicated that he will be there so one or two more should do it. Myron can probably also use a little help unloading the trailer about that time.

Myron will need help with the parking starting at 5:30 on Saturday morning as usual. Gate keepers will be needed starting at 7. We have arranged it so the folks doing the doors can sit down this time, making it a bit easier to do that duty. Only one door will be open but we will need 4 people at a time sitting at the entry tables during the crush.

I will need someone to take over the residual table sales duty first thing Saturday morning. It would be best if that person dropped by late tomorrow to reveiw the documentation on the tables sales. Judging by the response, probably most of the tables will be gone by the time I leave tomorrow night.

We hope we will have our usual first team on the raffle sales.

Folks to pass out the meals will be needed about 10:30 or so on Saturday.

Myron can chime in if I have missed anything.

There is plenty of fun for everyone. Hope you can make it.

73 - Darwin K5DOA

HI DARWIN

KAY & CARL FOUND MORE OF CHARLIE'S STUFF SO WE PURCHASED FOUR(4) INSIDE TABLES AND ONE(1) INSIDE TRAILER SPACE JUST LIKE LAST TIME..

KAY SAID SHE FELT LIKE SHE COULD HELP WITH THE SALES THIS TIME... WE SHALL SEE...

THANKS
73...RON AA5RT

Hi Mike!

Had a good time at the swap meet today!

I have a question for you. By any chance did any of your members, or anyone for that matter, pick-up a fuse & fuse holder cap in the East Doorway during the tear down around 12:30 PM today? It was a ceramic fuse with a clear cap about 3/4" in diameter, the old military type. I know it is a stretch, but I lost one from a piece of equipment I was hauling out to my car. I remember seeing it, but didn't think to look to see if it was mine.

If not, no big deal. Just thought would check to see.

See y'all in October!

4965. HamExpo VE Testing...

Yahoo group: Temple_ARC
Date: 2010-04-18 23:36:26 UTC
From: joebdorn
Topic: 4965 Message: 4965

We had a very successful VE test session at the Belton Police Station on Saturday. We had 26 sign up to take tests, 3 of which re-tested plus one upgrade via a grandfathered Tech License. The ARRL total count was 30 and as a result, we will have:

13 new Technician's
7 new General's and
3 new Extra's

The VE's participating were:

Joe Dorn, W5VEX
Mike Rhoden, W5MIK
James Cleveland, N5ONI
Robert Bullard, WD3T
Ross Gregg, W5ANW
Jan Gregg, W5GNK
Teddy Bruski, KE5UET
Priscilla Beauregard, KE5UES
Ron Thompson, W5WRE
Mike Hankins, KI5M
Michael Sherrod, WB5PBS
Gerald Richmond, N5ZXJ
Kevin Bolton, W5KVN
Marion Bolton, W5MNB

Note: FYI:

Five of the fourteen are TARC members

Three were visitors from other areas

The other six were regular VE's from the area

Once again, a special thanks to Mike Rhoden, W5MIK, for making the Belton Municipal Court and Police Station available to us for the test session...

Nope, not yet He works the registration and I control the testing and the tests and the return to the ARRL VEC. This has been our operation ever since we started the group

Gerald is much better at the paper work than I am, might be because he has been through it so many times GRIN

I think I am going to take a week and spend two hours a day with him until he is ready to test or get rid of me.

4968. Airshow

Yahoo group: Temple_ARC
Date: 2010-04-21 22:09:33 UTC
From: k5doa@vvm.com
Topic: 616 Message: 4968

After sending out invitations to the folks who helped out last time, I still have a few slots available on Friday afternoon (April 30), Saturday (May 1) and Sunday (May 2). Let me know if you want to volunteer, first come first served if you can do an available slot. Let me know when you could do a 3 hours shift between 10 and 6:30 PM. The more flexible you are, the better chance I have to fit you into the schedule.

The usual disclaimers apply. This is not a TARC sponsored activity. We don't do any hamming as part of the show. We hand out and check in commercial radios and do a small amount of communications on the commercial frequencies. But volunteering for a shift gets you into the air show for free for all three days. Information on the show may be found at www.centraltexasairshow.com.

I must know ASAP as I have to turn in the final list by Friday.

If I have already directly mailed you as a returning volunteer, and you have not responded, I need your reply immediately or else I need to fill your slot.

Thanks for helping out. 73 Darwin K5DOA

Topic: 4972 Message: 4973

I take my scanner and my Aviation radio with me and listen to the pilots and the temp FAA tower that is set up.

Scan 118.0 MHz to 136.0 MHz AM.

You'll need to just scan all the time till it stops on something.
When you hear something, pause it quickily and save it. They keep things very short and sweet.

Temple airport unicom is 123.0 MHz.

Hope you catch them talking this year.

Gerald - N5ZXJ

4974. Weather radio displays in HEB's... I have a project and need some help

Yahoo group: Temple_ARC
Date: 2010-04-25 05:16:56 UTC
From: Rocket
Topic: 4974 Message: 4974

Hello everyone...

I have been asked to see if I can get some help from some of the local radio clubs to help with some weather radio displays in the local area HEB stores in May.

The need is to help people that buy a weather radio to get the very basic programming done while they are in the store after they have purchased them.

You might get interviewed by either Nick, Andy or Lynae while doing so and be asked about Skywarn activities.

Only this I ask is that we have a very neat appearance if we are interviewed for the events.

If you may be interested in help with this get in touch with me at n5zxj@... or richmond@...

the dates and locations are as follows:

Weather Radio Appearances...we need you to contact some Amateur Radio Clubs to line up some help for these appearances. If you can help out with some of days that would help.

4/27 Tuesday 2511 Trimmer Rd, Killeen 4p-7p

4/29 Thursday 3002 S. 31st St, Temple 4p-7p

5/4 Tuesday 9100 Woodway Dr, Waco 4p-7p

5/11 Tuesday 2511 Trimmer Rd, Killeen 4p-7p

5/18 Thursday 3002 S. 31st St, Temple 4p-7p

5/25 Tuesday 9100 Woodway Dr, Waco 4p-7p

Thanks,

Gerald N5ZXJ

4975. TARC Breakfast - Saturday May 1st

Yahoo group: Temple_ARC
Date: 2010-04-26 02:10:36 UTC
From: John Hobson
Topic: 4974 Message: 4975

All,

As a thank you and celebration for success of the Spring HamExpo, TARC is holding a breakfast for all TARC members and the many VEs that helped put on the VE test session. The breakfast will be at the Golden Coral in Temple at 2113 SW HK Dodgen Loop on May 1st at 9:00 AM. Breakfast is on TARC. Please arrive on or before 9:00 so I can pay for everyone at one time.

HamExpo was a great success. Despite the weather, we received many compliments from fellow Hams and commercial vendors for a job well done and their appreciation for holding the Belton Hamfest. The VE test session was also a success. Out of the 26 that showed up for the test session, there were 13 to passed the technician class, 7 general class and 3 extra class. I would like to personally thank the many TARC members and VEs for their contributions to HamExpo and VE test session.

John WD5BFS

4981. VE's needed

Yahoo group: Temple_ARC
Date: 2010-05-08 01:53:58 UTC
From: Joe Dorn, W5VEX
Topic: 4981 Message: 4981

I need one more VE to give a Technician test on Sunday. It will be around 1:00pm at a place convenient to all. It should take about an hour.

Be aware, this is Mother's day.

I have received through the club's Post Office box #616 a Thank You card from Temple College.

" Your long history with Mr. Schlieper will be memorialized by your donation to the scholarship fund, but will also have a living tribute in the form of a tree planted in his name. As you know, Mr. Schlieper's contributions to the College and the ARRL were innumberable and we're grateful for your acknowledgment.

All Best,
Jennifer Graham
Executive Director
Temple College Foundation

I would like to note to the readers of the group that any mail received in the TARC club post office box that is not to the club, but addressed to any individual will be returned to sender.

All mail sent to the Temple Amateur Radio Club
"in care of" C/O: any name will be opened by a member of the current elected board.

Mail received to anyone who is no longer a current member at PO Box 616 will be returned to sender.

Thanks

4994. Ham Test at TARC Field Day

Yahoo group: Temple_ARC
Date: 2010-06-22 03:14:50 UTC
From: Joe Dorn, W5VEX
Topic: 4994 Message: 4994

I would like to offer a VE Test session at the Temple Amateur Radio Club's Field Day this Saturday. If I can get two additional Extra Class VE's to commit to assist, I will offer all test levels. I would like the test session to be at 10:00 AM while it is still reasonably cool. Please respond directly to me if you can assist.

General Class VE's will be welcome since I anticipate at least on Technician test.

This will be the last opportunity to take the Technician Test with the old pool questions; the new pool goes into effect on 1 July.

4997. TARC Field Day Tomorrow

Yahoo group: Temple_ARC
Date: 2010-06-25 20:25:42 UTC
From: Darwin Geiselbrecht
Topic: 4994 Message: 4997

Greetings all - We should be on track for our annual field day this weekend. We will begin setting up antennas and equipment at 9AM in the morning at our site at the Texas Early Day Tractor and Equipment Association (TEDTEA)
facility. We will begin operating at 1PM and and operate until about 10AM or so on Sunday morning. A meal of BBQ and fixings will be served tomorrow around 6PM. We will arrange some kind of breakfast for folks at the site very early on Sunday.

The site is located on 1717 Eberhardt road just north of Nugent drive in northwest Temple. Directions and a map of the excellent facility may be found at
http://www.tedtea.org/index.php/directions-to-the-show-grounds .

We are especially in need of help during the setup period at 9AM Saturday and the tear down at 10AM on Sunday.
Terry and I will be dropping by the storage container at 8:30 in the morning to pick up antennas and other equipment and should be at the field day site at or shortly after 9AM.

As usual, We will be operating in the 2A category this year which means that we will be operating 2 transmitters simultaneously. If six meters opens up, we can also operate there without affecting our class. Our focus this year is on giving the maximum number of folks the opportunity to get in some HF contest like operating time. We should have plenty of control operators with advanced licenses available to pair up with any technician licenses that want to get in some time on the low bands. We operate through the night (when it is cooler) so plan to spend some time on the rigs then also. We do request that you do not set up any auxiliary stations at the site as it would affect our class and possibly interfere with our 2A operations.

As a bonus, I understand that Joe and volunteers from CTARC and TARC will have VE testing available at 10AM for those looking for their license or license upgrades.

We hope to see some folks from other clubs in the Bell county area join us to help out and operate. So if you have access to the other mailing lists please feel free to cross post this message to those lists.

The site has excellent shade under the pavilion and the temperatures are expected to be below 100, so come out and join us in the balmy Texas summer weather.

73 - Darwin K5DOA

Darwin for your information, the 7290 Traffic net will be in operation from 13:00L to 14:00L tomorrow for any traffic the Field day operators generate. I think that Mike WA5EQQ already knows tis, but I'm not sure. Have an enjoyable weekend.

5002. [Fwd: July 4th Parade]

Yahoo group: Temple_ARC
Date: 2010-07-01 22:24:42 UTC
From: k5doa@vvm.com
Topic: 5002 Message: 5002

Our participation in the line up process for the Belton July 4th parade is coming up Saturday morning.

We will plan on meeting at the parking lot at the corner of 9th and Pearl at 7:30 on Saturday morning. Enter Mary Hardin Baylor through the main gate on 10th from 317 and turn left on Pearl at the next intersection. Then turn right on 9th and enter the lot. If you should be late, and the city has already closed 317 through town, it will be necessary to enter the campus from the west side off loop 121. However, they have indicated that will be delaying the street closings until well after 8:00, so that should not be a problem.

The schedule according to Jason is to pick up the golf carts (4) at 7:45 and have the briefing prior to 8am before to going out on the line up.

Someone else will be helping Jason Morgan as our coordinator this year. So we will have the usual set of printouts showing where things go. He will have the maps like last year showing the approximate locations of the numbered slots. There do not seem to be any new wrinkles in the parade this year. Line up will be along the same two paths as last year.

We will plan on using the N5DJJ Belton repeater as usual. The frequency is 147.3/147.9 with a 88.5 tone. It has worked great for us in the past. Hand helds is the order of the day, as all the activity will be on foot or in a few carts.

There should be plenty of water available as Myron is bringing some in addition to any the Chamber might provide.

Be sure to bring some strong sun block and a big hat. A rain cover might be in order this year.

Thanks to all who have indicated they can help. We can always use more help. This is a good event that exercises our communications capabilities. If you are a new ham, this is a good event to get involved with. Even if you have not purchased a radio yet, we can pair you up with a buddy on the line up team.

The parade starts from 10th and 317 at 10 o'clock. If past experience is a clue, we should be done between 11 and 11:30.

Thanks for helping out. CU there. 73 - Darwin K5DOA

Subject: [TARC] [Fwd: July 4th Parade]

Our participation in the line up process for the Belton July 4th parade is coming up Saturday morning.

We will plan on meeting at the parking lot at the corner of 9th and Pearl at 7:30 on Saturday morning. Enter Mary Hardin Baylor through the main gate on 10th from 317 and turn left on Pearl at the next intersection. Then turn right on 9th and enter the lot. If you should be late, and the city has already closed 317 through town, it will be necessary to enter the campus from the west side off loop 121. However, they have indicated that will be delaying the street closings until well after 8:00, so that should not be a problem.

The schedule according to Jason is to pick up the golf carts (4) at 7:45 and have the briefing prior to 8am before to going out on the line up.

Someone else will be helping Jason Morgan as our coordinator this year. So we will have the usual set of printouts showing where things go. He will have the maps like last year showing the approximate locations of the numbered slots. There do not seem to be any new wrinkles in the parade this year. Line up will be along the same two paths as last year.

We will plan on using the N5DJJ Belton repeater as usual. The frequency is 147.3/147.9 with a 88.5 tone. It has worked great for us in the past. Hand helds is the order of the day, as all the activity will be on foot or in a few carts.

Congratulations Mark, KF5HUG.

And welcome to amateur radio.

I would like to thank the Temple Amateur Radio Club for the use of their field day facilities for the VE testing. I was also very pleased with the number of VE's that came out. I had at least six sign in.

BTW, Mark passed both Technician and General.

Yes, it is a small world Steve. My grandfather is actually one of the founding members of the Temple Amateur Radio Club (then called Central Texas Amateur Radio Club, I think). My dad and all of his siblings are gone now as are their respective spouses. It's nice to know that some folks still remember them.

In the event you are a member of TARC, I'm attaching a picture of my grandfather, Loy Hawbaker in the event you want it for your photo gallery. He's mentioned in the "TARC History" page.

See ya'

Howard

5009. FW: [STXARES] New FCC Rules on Drills

Yahoo group: Temple_ARC
Date: 2010-07-16 00:21:56 UTC
From: Joe Dorn, W5VEX
Topic: 5009 Message: 5009

BCC: several lists.

This looks like the breakthrough we have been wanting for the past couple of years after the FCC redefined the game. If I read this correctly all of the hospital and Bell County folks with a license can now use amateur radio during drills under the 'Government Sponsored Rule'.

I take a little credit for this since I brought the question up with the FCC rep at Dayton a year ago. The squeaking wheel got oiled. BTW, I was not very popular with some groups in the session that were bending the rules big time.

I have not seen anything else on this yet, so stay tuned.

This is from the South Texas Section Manager, Lee Cooper; the North Texas Section or Emergency Manager might get something out by year end.

Subject: [STXARES] New FCC Rules on Drills

The FCC has released it R&O on the use of Amateur Radio by paid employees during drills and exercises. See below for summary , but essentially it removes the waiver requirement and creates two sets of rules (Government & NGO) in which such drills are allowed.

AMENDMENT OF PART 97 OF THE COMMISSION'S RULES REGARDING AMATEUR RADIO

SERVICE COMMUNICATIONS DURING GOVERNMENT DISASTER DRILLS. Amended the

rules in this proceeding. Dismissed the American Hospital Association

Committee Petition for Rulemaking. (Dkt No. 10-72 10-54). Action by:

the Commission. Adopted: 07/14/2010 by R&O. (FCC No. 10-124). PSHSB

fcc.gov/edocs_public/attachmatch/FCC-10-124A1.txt
request for blanket waiver. Dismissed the Amateur Radio Policy

The important rule change is as follows:

(i) A station licensee or control station operator may participate on behalf of an employer in an emergency preparedness or disaster readiness test or drill, limited to the duration and scope of such test or drill, and operational testing immediately prior to such test or drill. Tests or drills that are not government-sponsored are limited to a total time of one hour per week; except that no more than twice in any calendar year, they may be conducted for a period not to exceed 72 hours.

Subject: FW: [Worldradio-l] Breaking News: FCC Okays Employee Participation inEmergency Drills

In the past, hams employed by emergency type governmental and public service organizations (hospitals, etc) were forbidden from participating in their company's emergency drills because of the fact they were on the clock, being paid for such particiation. This went contrary to the rule against making money with ham radio.

This has caused some folks a lot of grief lately and the FCC finally changed the rule. See message below.

73,

Pete

Sent: 7/15/2010 11:02:02 AM

Subject: [Worldradio-l] Breaking News: FCC Okays Employee Participation inEmergency Drills

From the WorldRadio Online Newsroom:

FCC Okays Employee Participation in Emergency Drills

Moving with unaccustomed speed, the FCC adopted a Report and Order on July 14, allowing hams who are employed by both government agencies and non-government agencies such as hospitals, to participate in emergency and disaster drills on behalf of their employers. The ruling was based on a Notice of Proposed Rule Making, WP-10-72, issued this past March, in response to petitions arising from a strict interpretation by the FCC's Enforcement Bureau of the prohibition on amateurs communicating on behalf of their employers. The decision came just more than a month after the reply comment deadline.

The ruling added a new paragraph to Section 97.113(a)(3) of the FCC rules, which reads as follows:

(i) A station licensee or control station operator may participate on behalf of an employer in an
emergency preparedness or disaster readiness test or drill, limited to the duration and scope of such test or
drill, and operational testing immediately prior to such test or drill. Tests or drills that are not
government-sponsored are limited to a total time of one hour per week; except that no more than twice in
any calendar year, they may be conducted for a period not to exceed 72 hours.

There is no specific effective date given in the Report and Order, so it will presumably become effective upon publication in the Federal Register. The complete text of the report and order may be accessed online at < <http://www.fcc.gov/Daily_Releases/Daily_Business/2010/db0714/FCC-10-124A1.pdf>
http://www.fcc.gov/Daily_Releases/Daily_Business/2010/db0714/FCC-10-124A1.pdf >.

All,

I have a few 12 volt, 25AH, deep cycle battery packs available for anyone that would like one as an emergency power source for a home station. The batteries were recently removed from service. I have checked them out and they appear to be in good shape. These batteries have a very low internal resistance and can deliver close to 100 amps for a short period. Even thought these are a gel cell like batteries, they can be charged faster than gel cells.

These are available on a first come basis and available at the next TARC meeting.

John.

I need three for the EchoLink and hospital network UPS units. I was about to go money hunting for new UPS units but I have reworked old units to accept other batteries. If I can not make them work I will make them available at the next TARC meeting.

BTW I am planning on attending the meeting with Dr. David Woolweaver. We need more like him.

July 21, 2010

Mike LeFan, WA5EQQ

1802 South 13th Street

Temple, TX 76504

Dear Mike:

We're pleased to tell you that Director Woolweaver has approved the application of the Temple Amateur Radio Club to hold an ARRL approved hamfest in Belton, TX on October 2, 2010.

As part of your agreement in becoming an ARRL-affiliated event, please remember to prominently display the ARRL diamond when promoting the event on web sites, in e-mails, advertisements and all other program material. The ARRL logo can be obtained from www.arrl.org/logos-photos.

Approximately three weeks prior to the event, I will send gift certificates for ARRL publications to be used as door prizes. To order other materials available at low- or no-cost to help represent ARRL membership and Amateur Radio recruitment, including brochures, hanging and standing banners, tabletop displays, table throws, and other giveaways (pens, magnets and stickers), please visit www.arrl.org/shop/Forms-and-Media-Warehouse/. See the attached brochure for more information. For effective coordination of ordering these materials and organizing the ARRL exhibit, you may want to contact your ARRL Division Director or ARRL Section Manager.

Good Luck! We wish you the best for a successful event.

Let us know if there is anything else we can do to help with your hamfest plans.

Joe,

I did some testing on the batteries I got and found a number of weak cells that did not show up until I tested with a load. The battery packs are made up of six 2 volt cells with copper straps between them. The cells are held together with molded plastic bottom and top pieces that make a single unit. I am trying to make up 3 good packs. I hope to get a few more battery packs in the near future and to swap out all weak cells so I can give you the strongest battery packs possible. One pack is currently on a desulfater which has already made some improvement. I might not have them ready by the meeting but I am working toward getting you 3 packs as requested.

John
